

RETICULOENDOTHELIAL SYSTEM

Reticuloendothelial system or macrophage system is the system of primitive phagocytic cells, which play important role in defense mechanism of the body.

MACROPHAGE

Macrophage is a large cell derived from monocyte. It has the property of phagocytosis. Therefore, the macrophage is also defined as a large phagocytic cell.

CLASSIFICATION OF RETICULOENDOTHELIAL CELLS

The reticuloendothelial cells are classified into two types:

- Fixed reticuloendothelial cells or tissue macrophages
- Wandering reticuloendothelial cells.

FIXED RETICULOENDOTHELIAL CELLS – TISSUE MACROPHAGES

The fixed reticuloendothelial cells are also called the tissue macrophages or fixed histiocytes because these cells are usually located in the tissues.

The tissue macrophages are:

Disorders of the Monocyte Macrophage System F. Schmalzl, D. Huhn, H. E. Schaefer, 2012-12-06 The origin and function of normal monocytes and macrophages have been clearly defined by extensive investigations in human and in animal models. The central importance of this cell system for the biological defense mechanisms is well established. Phagocytosis, inactivation and destruction of organic and inorganic materials, an important role in the initiation of humoral and cell-mediated immunological responses and the secretion of a variety of chemical mediator and effector substances are the most important features of this ontogenetically ancient cell system. However, the data on this cellular system are rather recent and this may explain why relatively little attention has been paid to the pathology of the monocyte macrophage system (MMS) until now. In addition, this monograph should focus attention on the secondary pathophysiological implications of the MMS in disorders not primarily originating from this system. Several techniques are available to identify even abnormal individuals of this cell system and therefore can be employed for the study of severely altered or neoplastic monocytic cells.

General Histology of the Mammal Radivoj V. Krstic, 2012-12-06 With a Foreword by Reiter R. J. Translated by Forster S. The Molecular and Cellular Biology of Wound Repair R. A. F. Clark, 2013-11-11 Provides comprehensive detail on the various aspects of particular molecules involved in the phases of injury and repair and the cellular movements and processes. This is an excellent reference book for libraries serving biology and health science clientele and for workers in this field of research. American Scientist from a review of the First Edition. All chapters of this second edition have been completely revised and expanded, especially the chapters on growth factors and extracellular matrix molecules. New chapters discuss provisional matrix proteins, extracellular matrix receptors and scarring versus non-scarring wound healing.

Pharmacology John Hadden, 2013-11-09 This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial RE Society and biomedical scientists in general who are interested in the intricate system of cells and molecular moieties derived from those cells which constitute the RES. It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular system. Nevertheless, because of historical developments and current interest in the subject by investigators from many diverse areas, it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology, biochemistry, phylogeny and ontogeny, physiology and pharmacology as well as clinical areas including immunopathology, cancer, infectious diseases, allergy and hypersensitivity. It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES, attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines. The treatise editors and their editorial board, consisting predominantly of the editors of individual volumes, are extremely grateful for the enthusiastic cooperation and enormous task undertaken by members of the biomedical community.
