behavior science has continued to tell us that men and women are fundamentally different. Biologists claim that women are better suited to raising families or are more gently uniquely empathetic. Men on the other hand continue to be described as excelling at tasks that require logic, spatial reasoning and motor skills. But a huge wave of research is now revealing an alternative version of what we thought we knew. The new woman revealed by this scientific data is as strong, strategic and smart as anyone else. In *Inferior*, acclaimed science writer Angela Saini weaves together a fascinating and sorely necessary new science of women. As Saini takes readers on a journey to uncover science's failure to understand women, she finds that we're still living with the legacy of an establishment that's just beginning to recover from centuries of entrenched exclusion and prejudice. Sexist assumptions are stubbornly persistent even in recent years; researchers have insisted that women are choosy and monogamous while men are naturally promiscuous, or that the way men's and women's brains are wired confirms long-discredited gender stereotypes. As Saini reveals, however, groundbreaking research is finally rediscovering women's bodies and minds. *Inferior* investigates the gender wars in biology, psychology and anthropology and delves into cutting-edge scientific studies to uncover a fascinating new portrait of women's brains, bodies and role in human evolution.
