Looking Ahead Human Factors Challenges In A Changing World:

Looking Ahead Raymond S. Nickerson, 2021-12-16 This volume aims to review some of the recent developments and trends that seem especially relevant to any attempt to understand near term future possibilities to consider what a variety of knowledgeable people are saying about changes and developments that could occur and to relate the possibilities to needs and opportunities for human factors research Human factors in this case includes not only the implications of human capabilities and limitations for the design of equipment and machines intended for human use but also applied psychology in a more general sense In particular it is taken to involve social systems as well as physical ones the interaction of people with the environment as well as with machines the facilitation of communication between people as well as between people and computers and the design of policies and procedures as well as the design of equipment The author's intention is to focus on anticipated problems including opportunities as well as difficulties and ask how human factors research might contribute to solutions It is assumed that there are ways in which such research could be useful in addressing societal problems that the profession has not yet realized and that these are more likely to be recognized in the future if the community is actively seeking to identify them

including cognitive performance under stress and aiding intellectual work **The History of Human Factors and Ergonomics** David Meister,2018-12-14 Human factors ergonomics HFE as a discipline has grown by accretions rather than having been developed systematically and deliberately Therefore this book s goal creates a formal conceptual structure for HFE It is intended as a contribution to cultural history because a ours is a technological civilization and b one cannot understand technology outside of the various disciplines that make up that technology A disciplinary history is highly specialized but the author maintains that HFE is distinctive in being the only discipline that relates humans to technology Other behavioral disciplines like anthropology have little connection with technology and this is what makes HFE important in the present historical era **Handbook of Aviation Human Factors** John A. Wise,V. David Hopkin,Daniel J.

Nickerson,2020-12-17 Drawing from the study of human reasoning Argumentation describes different types of arguments and explains how they influence beliefs and behaviour Raymond Nickerson identifies many of the fallacies biases and other flaws often found in arguments as well as stratagems schemes illogical and alogical tactics that people regularly use to persuade others Much attention is given to the evaluation of arguments Readers will learn a new schematic for evaluating arguments based on cognitive science As a source for understanding and evaluating arguments in decision making it is ideal for courses on cognition reasoning and psychology Conditional Reasoning Raymond Nickerson,2015-06-12 Conditional

reasoning is reasoning that involves statements of the sort If A Antecedent then C Consequent This type of reasoning is

ubiquitous everyone engages in it Indeed the ability to do so may be considered a defining human characteristic Without this ability human cognition would be greatly impoverished What if thinking could not occur There would be no retrospective efforts to understand history by imagining how it could have taken a different course Decisions that take possible contingencies into account could not be made there could be no attempts to influence the future by selecting actions on the basis of their expected effects Despite the commonness and importance of conditional reasoning and the considerable attention it has received from scholars it remains the subject of much continuing debate Unsettled questions both normative and empirical continue to be asked What constitutes normative conditional reasoning How do people engage in it Does what people do match what would be expected of a rational agent with the abilities and limitations of human beings If not how does it deviate and how might people's ability to engage in it be improved This book reviews the work of prominent psychologists and philosophers on conditional reasoning It describes empirical research on how people deal with conditional arguments and on how conditional statements are used and interpreted in everyday communication It examines philosophical and theoretical treatments of the mental processes that support conditional reasoning Its extensive coverage of the subject makes it an ideal resource for students teachers and researchers with a focus on cognition across disciplines *Human Factors for Sustainability* Andrew Thatcher, Klaus J.
