*The Continental Permian in Central, West, and South Europe* H. Falke, 1976-08-31 Geological research on the continental Permian in West Central and South Europe has been neglected in the former days. Nevertheless, interest in it increased in the last twenty years and became important owing to the problems connected with continental sedimentation and also because of the important discoveries of oil gas and uranium deposits. Therefore, detailed investigations in all countries where continental Permian appears have been made with the help of boreholes. These investigations included sedimentation basins in which the above mentioned deposits are not expected. Consequently, the numerous results received in connection with still unanswered questions led to the idea to invite the specialists to a meeting. The first meeting was held in Pisa 1966 and a further one in Vienna 1969. Both conferences exclusively dealt with the deposits of the Verrucano province both in the Alps and Apennines. With respect to the importance of such meetings, a further one was intended to be arranged in Mainz dealing with the whole continental Permian in West Central and South Europe. With financial help of the NATO Scientific Affairs Division, this meeting could be arranged as a NATO Advanced Study Institute.

*The Geology of Egypt* Farouk El Baz, 1984-01-01  
*The British Seas* Jack Hardisty, 2024-04-03 Originally published in 1990 and designed as a student text. *The British Seas* is a clear introduction to the oceanography and resources of the region. It is unique in providing a detailed review of the resources of the north west European continental shelf together with a comprehensive description of the environment. Introducing the shelf region as if it were a new country, Jack Hardisty explores first its physical environment and then summarizes the distribution and exploitation of resources from the environment. Part 1 on the oceanography covers the shape of the shelf, its geological history and its wave and tidal regimes. Part 2 on the resources looks at trade and shipping and the hydrocarbon, fishing and seabed mining industries. It goes on to discuss wave and tidal power and to consider the problem of pollution in terms of resource utilization. The industrial technology and the environmental potential of each resource are examined and the economic and legislative restrictions are analysed.

**The Encyclopedia of the Solid Earth Sciences** Philip Kearey, 2009-07-17 From AMETHYST to ARTESIAN SPRING, from COAL GAS to CONTINENTAL DRIFT, from SEISMOGRAM to STROMATOLITE, the Encyclopedia of the Solid Earth Sciences provides a comprehensive modern reference text for all the subdisciplines of the Earth Sciences. The Encyclopedia is primarily intended for professional earth scientists and those specializing in related subjects. However, it will also provide an important reference for students of the Earth Sciences and those needing information on terms in current usage. The book contains three main styles of entry: articles up to 1500 words on major topics such as plate tectonics; standard entries of up to a couple of hundred words on topics such as groups of minerals; and brief definitions of, for instance, individual minerals.

Coastal Lowlands W.J.M. van der Linden, S.A.P.L. Cloetingh, J.P.H. Kaasschieter, J. Vandenberghe, W.J.E. van de Graaff, J.A.M. van der Gun, 2013-04-17 Coastal Lowlands by virtue of their position across the boundary of land and sea belong to the earth's most dynamic systems This is true in the physical i.e. geological and biological as much as in the cultural and social sense Although the nearness to the sea was and still is fraught with danger coastal lowlands have always attracted human interest providing challenging opportunity holding the promise of profitable enterprise Coastal lowlands especially where rivers enter the region are the cradles of great civilisations and there of old populations reached highest densities As an example Dutch history is a tale of human struggle and endeavour with and against the sea Dutch lowlanders wrestled their land from the sea in turn the sea forged a nation of independent fishermen navigators farmers and traders who built their towns and ships

at the borders of the North and Zuyder Seas As lowlands subside and sea level rises apparently these days at an increasing rate concern about this environment world wide is also rising It certainly was appropriate and timely for the Royal Geological and Mining Society of the Netherlands when celebrating its 75th birthday to organize and call together a symposium focussing attention on the geology and geotechnology of coastal lowlands geology to better understand their formation and evolution geotechnology to better manage and harvest resources as much as protect a unique and crucial environment
