

# **Jung and Whitehead: An Interplay of Psychological and Philosophical Perspectives on Rationality and Intuition**

**DRAFT - NO FIGURES**

Farzad Mahootian and Tara-Marie Linné

"...the unconscious is the residue of unconquered nature in us, just as it is also the matrix of our unborn future."

(Jung, *Psychological Types* §907)

## **Introduction**

Our approach to *Rational Intuition* reflects the shared purpose of other chapters in this volume: to explore and articulate the relationship between rationality and intuition. Both Carl Gustav Jung and Alfred North Whitehead were conversant with the history of these terms. In Jung's view, thinking and feeling are aspects of what he called the "rational functions," while intuition and sensation are aspects of the nonrational, or what he called the "irrational functions" of the psyche – where psyche refers to "the totality of all psychic processes, conscious as well as unconscious" (Jung, 1921, p. 463 §797).

Whitehead's philosophy emphasized feeling over the other functions. In their discussion of traditional mental functions, both followed the general direction laid out by Aristotle and the epistemological traditions that grew out of his writings on logic and rhetoric.<sup>1</sup> However, each introduced innovations in order to address specific philosophical issues of interest to them.

Terms such as intuition, sensation, feeling, and thinking have a very long history in both common language and the technical discourse of philosophy. A comparison of Jung and Whitehead on the issue of rational intuition in the span of a single chapter is challenging, given the divergence of their original and sometimes idiosyncratic use of

Jonathan Lowe, 2000-01-20 A lucid and wide ranging introduction to the philosophy of mind suitable for readers with a basic grounding in philosophy      **Aspects of Rationality** Raymond S. Nickerson, 2007-11-19 What does it mean to be rational to reason well and effectively How does rationality broadly conceived relate to the knowledge one acquires the beliefs one forms the explanations one constructs or appropriates the judgments and decisions one makes the values one adopts What is the character of human reasoning and in particular does it t      *Handbook of Epistemology* I. Niiniluoto, Matti Sintonen, Jan Wolenski, 2004-03-31 The twenty eight essays in this Handbook all by leading experts in the field provide the most extensive treatment of various epistemological problems supplemented by a historical account of this field The entries are self contained and substantial contributions to topics such as the sources of knowledge and belief knowledge acquisition and truth and justification There are extensive essays on knowledge in specific fields the sciences mathematics the humanities and the social sciences religion and language Special attention is paid to current discussions on evolutionary epistemology relativism the relation between epistemology and cognitive science sociology of knowledge epistemic logic knowledge and art and feminist epistemology This collection is a must have for anybody interested in human knowledge and its fortunes and misfortunes      **The Thinking Mind** Niall Galbraith, Erica Lucas, David Over, 2016-10-14 The field of thinking has undergone a revolution in recent years opening itself up to new perspectives and applications The traditional focus on laboratory based thinking has transformed as theoretical work is now being applied to new contexts and real world issues This volume presents a state of the art survey of human thinking in everyday life based around and in tribute to one of the field s most eminent figures Ken Manktelow In this collection of cutting edge research Manktelow s collaborators and colleagues review a wide range of important and developing areas of inquiry This book explores modern perspectives on a variety of traditional and contemporary topics including Wason s reasoning tasks logic meta reasoning and the effect of environment and context on reasoning The Thinking Mind offers a unique combination of breadth depth theoretical exploration and real world applications making it an indispensable resource for researchers and students of human thinking      The Rationality Quotient Keith E. Stanovich, Richard F. West, Maggie E. Toplak, 2018-02-09 How to assess critical aspects of cognitive functioning that are not measured by IQ tests rational thinking skills Why are we surprised when smart people act foolishly Smart people do foolish things all the time Misjudgments and bad decisions by highly educated bankers and money managers for example brought us the financial crisis of 2008 Smart people do foolish things because intelligence is not the same as the capacity for rational thinking The Rationality Quotient explains that these two traits often and incorrectly thought of as one refer to different cognitive functions The standard IQ test the authors argue doesn t measure any of the broad components of rationality adaptive responding good judgment and good decision making

The authors show that rational thinking like intelligence is a measurable cognitive competence Drawing on theoretical work and empirical research from the last two decades they present the first prototype for an assessment of rational thinking analogous to the IQ test the CART Comprehensive Assessment of Rational Thinking The authors describe the theoretical underpinnings of the CART distinguishing the algorithmic mind from the reflective mind They discuss the logic of the tasks used to measure cognitive biases and they develop a unique typology of thinking errors The Rationality Quotient explains the components of rational thought assessed by the CART including probabilistic and scientific reasoning the avoidance of miserly information processing and the knowledge structures needed for rational thinking Finally the authors discuss studies of the CART and the social and practical implications of such a test An appendix offers sample items from the test Logic and Uncertainty in the Human Mind Shira Elqayam,Igor Douven,Jonathan St B. T. Evans,Nicole Cruz,2020-06-10 David E Over is a leading cognitive scientist and with his firm grounding in philosophical logic he also exerts a powerful influence on the psychology of reasoning He is responsible for not only a large body of empirical work and accompanying theory but for advancing a major shift in thinking about reasoning commonly known as the new paradigm in the psychology of human reasoning Over s signature mix of philosophical logic and experimental psychology has inspired generations of researchers psychologists and philosophers alike over more than a quarter of a century The chapters in this volume written by a leading group of contributors including a number who helped shape the psychology of reasoning as we know it today each take their starting point from the key themes of Over s ground breaking work The essays in this collection explore a wide range of central topics such as rationality bias dual processes and dual systems as well as contemporary psychological and philosophical theories of conditionals It concludes with an engaging new chapter authored by David E Over himself which details and analyses the new paradigm psychology of reasoning This book is therefore important reading for scholars researchers and advanced students in psychology philosophy and the cognitive sciences including those who are not familiar with Over s thought already *Knowledge in Minds* A. L. Wilkes,1997 Many texts in cognitive psychology deal with the details of cognitive processes as individually defined This text provides an account of cognition that focuses upon the cumulative and share nature of human enterprise It aims to adopt a balanced approach by considering both theories The result is a wide ranging detour that starts off with cognitive science then diverts into the domains of developmental and social psychology before ending up in territory that is normally occupied by historians and evolutionary biologists *The Oxford Handbook of Electoral Persuasion* Elizabeth Suhay,Bernard Grofman,Alexander H. Trechsel,2020-04-01 Elections are the means by which democratic nations determine their leaders and communication in the context of elections has the potential to shape people s beliefs attitudes and actions Thus electoral persuasion is one of the most important political processes in any nation that regularly holds elections Moreover electoral persuasion encompasses not only what happens in an election but also what happens before and after involving candidates parties interest groups the media and the voters

themselves This volume surveys the vast political science literature on this subject emphasizing contemporary research and topics and encouraging cross fertilization among research strands A global roster of authors provides a broad examination of electoral persuasion with international perspectives complementing deep coverage of U S politics Major areas of coverage include general models of political persuasion persuasion by parties candidates and outside groups media influence interpersonal influence electoral persuasion across contexts and empirical methodologies for understanding electoral persuasion

**Reasoning and Thinking** K. I. Manktelow,1999 This undergraduate textbook reviews psychological research in the major areas of reasoning and thinking deduction induction hypothesis testing probability judgement and decision making It also covers the major theoretical debates in each area and devotes a chapter to one of the liveliest issues in the field the question of human rationality Central themes that recur throughout the book include not only rationality but also the relation between normative theories such as logic probability theory and decision theory and human performance both in experiments and in the world outside the laboratory No prior acquaintance with formal systems is assumed and everyday examples are used throughout to illustrate technical and theoretical points The book differs from others in the market firstly in the range of material covered other tend to focus primarily on on either reasoning or thinking It is also the first student level text to survey an important new theoretical perspective the information gain or rational analysis approach and to review the rationality debate from the standpoint of psychological research in a wide range of areas

**Thinking and Reasoning** K. I. Manktelow,2012 This completely rewritten textbook reflects on the revolutionary changes that have occurred in the field of Thinking and Reasoning in recent years

**Evolution and the Psychology of Thinking** David E. Over,2004-06-02 The field of evolutionary cognitive psychology has stimulated considerable interest and debate among cognitive psychologists and those working in related areas In this collection leading experts evaluate the status of this new field providing a critical analysis of its most controversial hypotheses These hypotheses have far reaching implications for cognition including a modular view of the mind which rejects in its extreme form any general learning or reasoning abilities Some evolutionary psychologists have also proposed content dependent accounts of conditional reasoning and probability judgements which in turn have significant and equally controversial implications about the nature of human reasoning and decision making The contributions range from those that are highly critical of the hypotheses to those that support and develop them The result is a uniquely balanced cutting edge evaluation of the field that will be of interest to psychologists philosophers and those in related subjects who wish to find out what evolutionary considerations can and cannot tell us about the human mind

*Scientific and Philosophical Perspectives in Neuroethics* James J. Giordano,Bert Gordijn,2010-02-18 While neuroscience has provided insights into the structure and function of nervous systems hard questions remain about the nature of consciousness mind and self Perhaps the most difficult questions involve the meaning of neuroscientific information and how to pursue and utilize neuroscientific knowledge in ways that are consistent with some construal of social good

Written for researchers and graduate students in neuroscience and bioethics **Scientific and Philosophical Perspectives in Neuroethics** explores important developments in neuroscience and neurotechnology and addresses the philosophical ethical and social issues and problems that such advancements generate It examines three core questions First what is the scope and direction of neuroscientific inquiry Second how has progress to date affected scientific and philosophical ideas and finally what ethical issues and problems does this progress and knowledge incur both now and in the future

**The Science of Reason** Ken Manktelow, David Over, Shira Elqayam, 2010-10-18 This volume is a state of the art survey of the psychology of reasoning based around and in tribute to one of the field's most eminent figures Jonathan St B T Evans In this collection of cutting edge research Evans collaborators and colleagues review a wide range of important and developing areas of inquiry These include biases in thinking probabilistic and causal reasoning people's use of if sentences in arguments the dual process theory of thought and the nature of human rationality These foundational issues are examined from various angles and finally integrated in a concluding panoramic chapter written by Evans himself The eighteen chapters all written by leading international researchers combine state of the art research with investigation into the most fundamental questions surrounding human mental life such as What is the architecture of the human mind Are humans rational and what is the nature of this rationality How do we think hypothetically The Science of Reason offers a unique combination of breadth depth and integrative vision making it an indispensable resource for researchers and students of human reason

**Cognition and Conditionals** Mike Oaksford, Nick Chater, 2010 The conditional if then is probably the most important term in natural language and forms the core of systems of logic and mental representation Cognition and Conditionals is the first volume for over 20 years that brings together recent developments in the cognitive science and psychology of conditional reasoning

**From Is to Ought: The Place of Normative Models in the Study of Human Thought** Shira Elqayam, David E. Over, 2016-08-12 In the study of human thinking two main research questions can be asked Descriptive Q What is human thinking like Normative Q What ought human thinking be like For decades these two questions have dominated the field and the relationship between them generated many a controversy Empirical normativist approaches regard the answers to these questions as positively correlated in essence human thinking is what it ought to be although what counts as the ought standard is moot In contemporary theories of reasoning and decision making this is often associated with a Panglossian framework an adaptationist approach which regards human thinking as a priori rational In contrast prescriptive normativism sees the answers to these two questions as negatively correlated Normative models are still relevant to human thought but human behaviour deviates from them quite markedly with the invited conclusion that humans are often irrational Prescriptive normativism often results in a Meliorist agenda which sees rationality as amenable to education Both empirical and prescriptive normativism can be contrasted with a descriptivist framework for psychology of human thinking Following Hume's strict divide between the is and the ought descriptivism regards the descriptive and normative research questions as

uncorrelated or dissociated with only the former question suitable for psychological study of human behaviour This basic division carries over to the relation between normative ought rationality based on conforming to normative standards and instrumental is rationality based on achieving one's goals Descriptivist approaches regard the two as dissociated whereas normativist approaches tend to see them as closely linked with normative arguments defining and justifying instrumental rationality This research topic brings together diverse contributions to the continuing debate Featuring contributions from leading researchers in the field the e book covers a wide range of subjects arranged by six sections The standard picture Normativist perspectives In defence of soft normativism Exploring normative models Descriptivist perspectives Evolutionary and ecological accounts Empirical reports With a total of some 24 articles from 55 authors this comprehensive treatment includes theoretical analyses meta theoretical critiques commentaries and a range of empirical reports The contents of the Research Topic should appeal to psychologists linguists philosophers and cognitive scientists with research interests in a wide range of domains from language through reasoning judgment and decision making and moral judgment to epistemology and theory of mind philosophical logic and meta ethics

*The Robot's Rebellion* Keith E. Stanovich, 2010-10-15 The idea that we might be robots is no longer the stuff of science fiction decades of research in evolutionary biology and cognitive science have led many esteemed scientists to the conclusion that according to the precepts of universal Darwinism humans are merely the hosts for two replicators genes and memes that have no interest in us except as conduits for replication Richard Dawkins for example jolted us into realizing that we are just survival mechanisms for our own genes sophisticated robots in service of huge colonies of replicators to whom concepts of rationality intelligence agency and even the human soul are irrelevant Accepting and now forcefully responding to this decentering and disturbing idea Keith Stanovich here provides the tools for the robot's rebellion a program of cognitive reform necessary to advance human interests over the limited interest of the replicators and define our own autonomous goals as individual human beings He shows how concepts of rational thinking from cognitive science interact with the logic of evolution to create opportunities for humans to structure their behavior to serve their own ends These evaluative activities of the brain he argues fulfill the need that we have to ascribe significance to human life We may well be robots but we are the only robots who have discovered that fact Only by recognizing ourselves as such argues Stanovich can we begin to construct a concept of self based on what is truly singular about humans that they gain control of their lives in a way unique among life forms on Earth through rational self determination

*Conditional Reasoning* Raymond Nickerson, 2015-06-12 Conditional reasoning is reasoning that involves statements of the sort If A Antecedent then C Consequent This type of reasoning is ubiquitous everyone engages in it Indeed the ability to do so may be considered a defining human characteristic Without this ability human cognition would be greatly impoverished What if thinking could not occur There would be no retrospective efforts to understand history by imagining how it could have taken a different course Decisions that take possible contingencies into account could not be made there

could be no attempts to influence the future by selecting actions on the basis of their expected effects Despite the commonness and importance of conditional reasoning and the considerable attention it has received from scholars it remains the subject of much continuing debate Unsettled questions both normative and empirical continue to be asked What constitutes normative conditional reasoning How do people engage in it Does what people do match what would be expected of a rational agent with the abilities and limitations of human beings If not how does it deviate and how might people's ability to engage in it be improved This book reviews the work of prominent psychologists and philosophers on conditional reasoning It describes empirical research on how people deal with conditional arguments and on how conditional statements are used and interpreted in everyday communication It examines philosophical and theoretical treatments of the mental processes that support conditional reasoning Its extensive coverage of the subject makes it an ideal resource for students teachers and researchers with a focus on cognition across disciplines

**Bayesian Rationality** Mike Oaksford, Nick Chater, 2007-02-22 For almost 2 500 years the Western concept of what is to be human has been dominated by the idea that the mind is the seat of reason humans are almost by definition the rational animal In this text a more radical suggestion for explaining these puzzling aspects of human reasoning is put forward
