Reaction Diffusion Computers:

Reaction-Diffusion Computers Andrew Adamatzky,Benjamin De Lacy Costello,Tetsuya Asai,2005-10-05 The book introduces a hot topic of novel and emerging computing paradigms and architectures computation by travelling waves in reaction diffusion media A reaction diffusion computer is a massively parallel computing device where the micro volumes of the chemical medium act as elementary few bit processors and chemical species diffuse and react in parallel In the reaction diffusion computer both the data and the results of the computation are encoded as concentration profiles of the reagents or local disturbances of concentrations whilst the computation per se is performed via the spreading and interaction of waves caused by the local disturbances The monograph brings together results of a decade long study into designing experimental and simulated prototypes of reaction diffusion computing devices for image processing path planning robot navigation computational geometry logics and artificial intelligence The book is unique because it gives a comprehensive presentation of the theoretical and experimental foundations and cutting edge computation techniques chemical laboratory experimental setups and hardware implementation technology employed in the development of novel nature inspired computing devices Key Features Non classical and fresh approach to theory of computation In depth exploration of novel and emerging paradigms of nature inspired computing Simple to understand cellular automata models will help readers students to design their own computational experiments to advance ideas and concepts described in the book Detailed description of receipts and experimental setups of chemical laboratory reaction diffusion processors will make the book an invaluable resource in practical studies of non classical and nature inspired computing architectures Step by step explanations of VLSI reaction diffusion circuits will help students to design their own types of wave based processors Key Features Non classical and fresh approach to theory of computation In depth exploration of novel and emerging paradigms of nature inspired computing Simple to understand cellular automata models will help readers students to design their own computational experiments to advance ideas and concepts described in the book Detailed description of receipts and experimental setups of chemical laboratory reaction diffusion processors will make the book an invaluable resource in practical studies of non classical and nature inspired computing architectures Step by step explanations of VLSI reaction diffusion circuits will help students to design their own types of wave based processors **Physarum Machines: Computers From Slime Mould** Andrew Adamatzky,2010-08-26 A Physarum machine is a programmable amorphous biological computer experimentally implemented in the vegetative state of true slime mould Physarum polycephalum It comprises an amorphous yellowish mass with networks of protoplasmic veins programmed by spatial configurations of attracting and repelling gradients This book demonstrates how to create experimental Physarum machines for computational geometry and optimization distributed manipulation and transportation and general purpose computation Being very cheap to make and easy to maintain the machine also functions on a wide range of substrates and in a broad scope of environmental conditions As such a Physarum machine is a green and

  Machines, Computations, and Universality Jérôme Durand-Lose,Maurice Margenstern,2007-08-23 This book constitutes the refereed proceedings of the 5th International Conference on Machines Computations and Universality MCU 2007 held in Orleans France September 2007 The 18 revised full papers presented together with nine invited papers cover Turing machines register machines word processing cellular automata tiling of the plane neural networks molecular computations BSS machines infinite cellular automata real machines and quantum computing   **Behaviourism in Studying Swarms: Logical Models of Sensing and Motoring** Andrew Schumann,2018-05-25 This book presents fundamental theoretical results for designing object oriented programming languages for controlling swarms It studies the logics of swarm behaviours According to behaviourism all behaviours can be controlled or even managed by stimuli in the environment attractants motivational reinforcement and repellents motivational punishment At the same time there are two main stages in reactions to stimuli sensing perceiving signals and motoring appropriate direct reactions to signals This book examines the strict limits of behaviourism from the point of view of symbolic logic and algebraic mathematics how far can animal

behaviours be controlled by the topology of stimuli On the one hand we can try to design reversible logic gates in which the number of inputs is the same as the number of outputs In this case the behaviouristic stimuli are inputs in swarm computing and appropriate reactions at the motoring stage are its outputs On the other hand the problem is that even at the sensing stage each unicellular organism can be regarded as a logic gate in which the number of outputs means of perceiving signals greatly exceeds the number of inputs signals   Advances in Unconventional Computing Andrew Adamatzky,2016-07-26 The unconventional computing is a niche for interdisciplinary science cross bred of computer science physics mathematics chemistry electronic engineering biology material science and nanotechnology The aims of this book are to uncover and exploit principles and mechanisms of information processing in and functional properties of physical chemical and living systems to develop efficient algorithms design optimal architectures and manufacture working prototypes of future and emergent computing devices This second volume presents experimental laboratory prototypes and applied computing implementations Emergent molecular computing is presented by enzymatic logical gates and circuits and DNA nano devices Reaction diffusion chemical computing is exemplified by logical circuits in Belousov Zhabotinsky medium and geometrical computation in precipitating chemical reactions Logical circuits realised with solitons and impulses in polymer chains show advances in collision based computing Photo chemical and memristive devices give us a glimpse on hot topics of a novel hardware Practical computing is represented by algorithms of collective and immune computing and nature inspired optimisation Living computing devices are implemented in real and simulated cells regenerating organisms plant roots and slime mould The book is the encyclopedia the first ever complete authoritative account of the theoretical and experimental findings in the unconventional computing written by the world leaders in the field All chapters are self contains no specialist background is required to appreciate ideas findings constructs and designs presented This treatise in unconventional computing appeals to readers from all walks of life from high school pupils to university professors from mathematicians computers scientists and engineers to chemists and biologists   Applications, Tools and Techniques on the Road to Exascale Computing K. De Bosschere,E.H. D'Hollander,G.R. Joubert,2012-05-09 Single processing units have now reached a point where further major improvements in their performance are restricted by their physical limitations This is causing a slowing down in advances at the same time as new scientific challenges are demanding exascale speed This has meant that parallel processing has become key to High Performance Computing HPC This book contains the proceedings of the 14th biennial ParCo conference ParCo2011 held in Ghent Belgium The ParCo conferences have traditionally concentrated on three main themes Algorithms Architectures and Applications Nowadays though the focus has shifted from traditional multiprocessor topologies to heterogeneous and manycores incorporating standard CPUs GPUs Graphics Processing Units and FPGAs Field Programmable Gate Arrays These platforms are at a higher abstraction level integrated in clusters grids and clouds The papers presented here reflect this change of focus New architectures programming tools and techniques are

also explored and the need for exascale hardware and software was also discussed in the industrial session of the conference This book will be of interest to all those interested in parallel computing today and progress towards the exascale computing of tomorrow   *From Utopian to Genuine Unconventional Computers* Andrew Adamatzky,2006 Unconventional computing is a field of advanced computer science which general goal might be summarised as the quest for both new groundbreaking algorithms and physical implementations of novel and ultimately more powerful compared to classical approaches computing paradigms and machines This volume brings together work that especially focuses on experimental prototypes and genuine implementations of non classical computing devices A further goal was to revisit existing approaches in unconventional computing to provide scientists and engineers with blue prints of realisable computing devices and to take a critical glance at the design of novel and emergent computing systems to point out failures and shortcomings of both theoretical and experimental approaches   **Molecular Computing** Nicholas G. Rambidi,2014-10-09 The question whether molecular primitives can prove to be real alternatives to contemporary semiconductor means or effective supplements extending greatly possibilities of information technologies is addressed Molecular primitives and circuitry for information processing devices are also discussed Investigations in molecular based computing devices were initiated in the early 1970s in the hopes for an increase in the integration level and processing speed Real progress proved unfeasible into the 1980 s However recently important and promising results were achieved The elaboration of operational 160 kilobit molecular electronic memory patterned 1011 bits per square centimeter in the end of 90 s were the first timid steps of information processing further development Subsequent advances beyond these developments are presented and discussed This work provides useful knowledge to anyone working in molecular based information processing   *Quantum Inspired Computational Intelligence* Siddhartha Bhattacharyya,Ujjwal Maulik,Paramartha Dutta,2016-09-20 Quantum Inspired Computational Intelligence Research and Applications explores the latest quantum computational intelligence approaches initiatives and applications in computing engineering science and business The book explores this emerging field of research that applies principles of quantum mechanics to develop more efficient and robust intelligent systems Conventional computational intelligence or soft computing is conjoined with quantum computing to achieve this objective The models covered can be applied to any endeavor which handles complex and meaningful information Brings together quantum computing with computational intelligence to achieve enhanced performance and robust solutions Includes numerous case studies tools and technologies to apply the concepts to real world practice Provides the missing link between the research and practice
