**Neuropsychological Aspects of Closed Head Injury** Dr J Richardson, 2013-11-12 In all industrialised countries closed head injuries are responsible for vast numbers of hospital admissions and days of work lost For instance about 120 000 patients are admitted to hospital in the United Kingdom each year with a diagnosis that reflects closed head injury Such injuries are a major cause of deaths following accidents especially those that involve children and young people and they are also a major cause of handicap and morbidity among the survivors This clinical condition is intrinsically a neurological one but its proper evaluation demands an understanding of the associated psychology and psychopathology At the same time a major neurological condition with such a high level of incidence ought to be extremely informative about the functioning of the human brain and hence provide a major focus for neuropsychological investigation In this book the author seeks to integrate these two different perspectives by reviewing the clinical and neuropsychological aspects of closed head injury in a manner that is equally intelligible to researchers interested in the effects of brain damage upon human behaviour and to practitioners who are responsible for the assessment management and rehabilitation of head injured patients This is the second edition of a book which was first published in 1990 and which has been extensively revised in the light of the subsequent research in the field The book begins by considering the epidemiology causes and structural neuropathology of closed head injury It then considers the impact of closed head injury on memory cognition language communication personality and social behaviour Finally it outlines the outcome the mechanisms of recovery and the prospects for rehabilitation *Neurobehavioral Recovery from Head Injury* Harvey S. Levin, 1987 This volume will repay the reader with a greatly enhanced understanding of the challenge facing head injured patients when they try to return to society The Lancet

Reaction Time and Attention After Closed Head Injury A. H. van Zomeren, 1981 **Handbook of Head Trauma** Charles J. Long, Leslie K. Ross, 2013-06-29 Providing a thorough collection of information regarding clinical aspects of head injury from acute care to recovery this treatise interrelates a variety of neural specialties and broadens the rehabilitation process to include the family A Compendium of Neuropsychological Tests Otfried Spreen, Esther Strauss, 1998-02-19 In a survey of neuropsychologists published in The Clinical Neuropsychologist the first edition of the Compendium was named as one of the eleven essential books in their field This second edition has been thoroughly updated to cover new developments in neuroscience cognitive psychology and psychological assessment It includes new chapters on test selection report writing and informing the client executive functions occupational interest and aptitude and the assessment of functional complaints In addition to updating research findings about the tests covered in the first edition the book now contains almost twice as

many tests      *Cognitive and Behavioral Rehabilitation* Jennie Ponsford, 2004-01-23 Written by leading experts in the field this invaluable text situates the practice of cognitive and behavioral rehabilitation in the latest research from neurobiology and cognitive neuroscience Initial chapters review current findings on neuronal injury plasticity and recovery The volume next examines the neurobiology of core cognitive domains attention memory language visuospatial awareness and executive functioning focusing on the processes underpinning both healthy and impaired functioning Highlighting the practical applications of the research authors describe available interventions in each domain and set forth clear recommendations for clinical practice Also addressed are ways to understand and manage challenging behaviors such as aggression that may emerge in brain injured persons The concluding chapter provides overall strategies for helping people recover from the two most common forms of acquired neurological disability traumatic brain injury and stroke      **Coma Science** Professor Laureys, 2009-10-07 This serial is firmly established as an extensive documentation of the advances in contemporary brain research Each volume presents authoritative reviews and original articles by invited specialists This volume concentrates on coma and consciousness science presenting articles from leading figures in the area on the clinical and ethical implications of work in this field The book provides a thorough review of the various aspects of coma science from a review of the concepts questioning of recent advances case studies through to where research in the field is heading Provides the reader with a unique overview of all aspects of new advances in coma science Broad focus with contributions by the top scientists worldwide in the respective disciplines      *Journal of Rehabilitation Research and Development* , 2009      *Mild Head Injury* Harvey S. Levin, Howard M. Eisenberg, Arthur L. Benton, 1989-03-16 Despite extensive documentation of postconcussion symptoms the sequelae of mild head injury have not been fully appreciated until recent years This book provides the first comprehensive discussion of current advances in the understanding treatment and management of mild head injury In a lucid fashion the contributors discuss neurosurgical strategies and neurobehavioral outcome in adults and children neuroimaging and neurophysiological methods of investigation experimental models sports injuries and psychosocial and epidemiological aspects Innovative programs to mitigate disability after mild head injury are presented by the physicians and psychologists who developed them and the relationship between psychosocial consequences and postconcussional complaints and neuropsychological sequelae is discussed Up to date and comprehensive this book will be invaluable to clinicians and investigators in neurology neurosurgery neuropsychology and rehabilitation medicine      Neuropsychological Management of Mild Traumatic Brain Injury Sarah A. Raskin, Catherine A. Mateer, 1999-11-11 Despite the importance of the problem strikingly little has been written about effective approaches to the treatment of individuals with mild to moderate brain injury This book is designed for neuropsychologists counseling and rehabilitation psychologists and other rehabilitation professionals who work with individuals who have sustained brain injuries of mild to moderate severity It provides a context for understanding and evaluating the common consequences of such injuries and offers both theoretical perspectives and

practical suggestions for helping individuals to adjust to and compensate for residual difficulties Early chapters focus on different domains of cognitive functioning while later chapters describe clinical approaches to helping clients manage common emotional reactions such as depression irritability and anxiety While the book acknowledges and discusses the controversy about the origins of persistent symptoms following mild brain injuries it does not focus on the controversy Rather it adopts a what works approach to dealing with individuals who have persistent symptoms and perceptions that contribute to disability and to emotional distress Many of these individuals benefit significantly from neuropsychological intervention Case examples throughout the book illustrate the adaptation of cognitive cognitive behavioral and traditional psychotherapeutic approaches to individuals with mild to moderate brain injury Self regulation and self management of both cognitive failures and emotional responses are described as appropriate and effective in this population
