Hurray! Spring break is here! Tommy's mom and dad are also on vacation from work all week. They want to plan all kinds of fun things to do, like biking, hiking, fishing, swimming, and tennis. They are hoping for some warm, enjoyable weather. However, they just cannot decide which day to do each activity. So, they decided to check the weather forecast in the newspaper before making final plans.

When you make predictions, you use information from a story to determine what will happen next.

Hayes,2013-04-03 This book started with a simple idea examine models of reading instruction that have emerged during the past 20 years These models span a wide range of instruction representing a continuum from highly structured task analytic instruction to child centered and holistic instruction Each model has its own epistemology or views on how reading and instruction are to be defined The different epistemologies indicate different principles of instruction which in turn indicate different practices in the classroom Each model is also supported by a different research base In this volume leading proponents of these different models discuss their ideas about reading instruction thereby encouraging readers to make their own comparisons and contrasts The chapter authors seem to adopt the editors eclectic approach to some greater or lesser extent incorporating aspects of other models into their instruction as they see other goals Thus models of reading instruction are complex Complicating matters further is the fact that teachers hold their own models of reading which may or may not be congruent with those discussed here Although academically developed models influence college preservice and in service instruction teachers own models of reading filter the information that they take from what they learn from these perspectives By carefully examining these variables this book makes a firm contribution toward

disciplined inquiry into what it means to teach reading
