Reading Disorders in the United States United States. Secretary's (HEW) National Advisory Committee on Dyslexia and Related Reading Disorders, 1969

Cross-Linguistic Study of Acquired Reading Disorders Prathibha Karanth, 2012-12-06 The acquisition of reading the teaching of reading and the difficulties encountered have been of substantial interest to a wide range of researchers and practitioners for centuries. Given the increasing centrality of literacy in modern life they are now of even greater interest to an ever widening base of professionals. The study of the acquired reading disorders though in existence for over a century received enormous impetus with the publication of a seminal paper by Marshall and Newcombe in 1966 leading to neuropsychological model building of reading. Over the last 30 years within the single case study design there has been extensive and exceedingly fine grained research on individuals with acquired disorders of reading in an attempt to establish the validity of these models of reading and the human brain. In addition these models have had considerable influence on models of the acquisition of reading in children and their concomitant difficulties. Much of this research has been in readers of the alphabetic scripts particularly the opaque English script. During the last decade or so there has been increasing evidence particularly in research on reading acquisition that what is true of alphabetic scripts like English may not be universally true of all of the scripts of the world. This has led to considerable research into the process of learning to read and write and on the factors affecting reading which are the touchstone of the models within broader cross linguistic and cross cultural perspectives

Reading Disabilities R.M. Joshi, C.K. Leong, 2013-03-11 The present volume is based on the proceedings of the Advanced Study Institute ASI sponsored by the North Atlantic Treaty Organization NATO. The Institute was conducted at the beautiful Chateau de Bonas near Toulouse France in October 1991. A number of scholars from different countries participated in the two week institute on differential diagnosis and treatments of reading and writing problems. The accepted papers for this volume are divided into three sections: a Differential diagnosis of reading disabilities, b Access to language related component processes and c Reading spelling strategies. The other papers appear in a companion volume.

Developmental and Acquired Dyslexia: Neuropsychological and Neurolinguistic Perspectives also coedited by Joshi and Leong and published by Kluwer Academic Publishers. Several people and organizations have helped us in this endeavor and their assistance is gratefully acknowledged. Our special thanks are due to the Scientific Affairs Division of NATO for providing the major portion of the financial support. Dr L V da Cunha of NATO and Dr THo Kester and Mrs Barbara Kester of the International Transfer of Science and Technology ITST for their help and support of the various aspects of the institute. Mr Charles Stockman and the entire staff of the Chateau de Bonas for making our stay a pleasant one by helping us to run the

Institute smoothly We also wish to thank our reviewers and the following people for other assistance Christi Martin and Xi wu Fang

Visual Processes in Reading and Reading Disabilities Dale M. Willows, Richard Kruk, Evelyne Corcos, 2012-12-06 Over the last 25 years reading processes have been the focus of an enormous amount of research in experimental psychology as well as in other disciplines The theories and models emerging from this research have greatly advanced understanding of both normal acquisition and of reading disabilities Although great progress has been made there are certain aspects that have been relatively neglected in the current understanding Specifically the role of visual factors has received less attention than that of other component processes This is particularly surprising since reading and writing are distinct from the other language processes of speaking and listening in large part by virtue of the fact that a visual dimension is involved Relevant research is broadly scattered both geographically and in terms of disciplines and there have been no major reviews or books concerned with the visual dimension of reading and reading disabilities The purpose of this book is to bring together a broad range of evidence that concerns the role of visual information in reading and reading disabilities Because reading processes are of central interest to cognitive scientists neuropsychologists psycholinguists clinicians and educators this book should draw a very broad readership

Kaplan and Sadock's Concise Textbook of Child and Adolescent Psychiatry Benjamin J. Sadock, Virginia A. Sadock, Harold I. Kaplan, 2009 This book presents updated clinical material on child and adolescent psychiatry from the best selling Kaplan and Sadock's Synopsis of Psychiatry Tenth Edition Coverage includes clinically relevant information on normal and abnormal development examination neuroimaging learning communication and behavioral disorders adolescent substance abuse forensic issues and the spectrum of psychiatric problems such as depression and bipolar disorders Treatment chapters include a broad range of psychopharmacotherapeutic and psychotherapeutic techniques and the many controversies related to appropriate use of medication in children are addressed The book is DSM IV TR compatible and replete with case studies and tables including DSM IV TR tables

Reading Disabilities B. Pennington, 2012-12-06 This book is unique in that it brings together in one place an account of recent advances in our understanding of the biology of dyslexia It grew out of a Rodin Remediation Foundation International conference held on this topic in Boulder Colorado in 1990 which included most of the world's experts on the genetics and neurology of dyslexia Ten years ago a volume on this topic would scarcely been possible and now we have an emerging comprehensive neuroscientific understanding of this complex behavioral disorder that goes from genes to brain to behavior Building on recent advances in the understanding of the cognitive phenotype of dyslexia these authors present new data on both the etiology and brain mechanisms underlying that phenotype Reading disability or dyslexia has a high familial recurrence rate and is partly heritable Genetic linkage studies are beginning to identify the possible locations of genes influencing this phenotype On the neurological side several independent studies have found neuroanatomical differences in the dyslexic brain which are due to early changes in brain development Thus contrary to the views held by some educators

that dyslexia is a myth the results presented in this book firmly establish dyslexia as a real biological condition This book is relevant to researchers and practitioners concerned with both normal and abnormal reading development **Reading**

Brown, 2009 The only book that covers the multiple ways in which ADHD is complicated by other psychiatric and learning disorders in both children and adults ADHD Comorbidities Handbook for ADHD Complications in Children and Adults features comprehensive research based information on ADHD and its full range of coexisting syndromes Contributing researcher clinicians familiar with the complications that additional disorders pose summarize in accessible language what is currently known about ADHD and its comorbidities from preschool age to adulthood These authors describe how ADHD leads to different profiles at different stages of development and how to adjust treatment strategies for both ADHD and additional disorders to reduce the impairments resulting from their combination The book offers a new paradigm for understanding ADHD viewing it not as a simple behavior disorder but as a complex developmental impairment of executive functions in the brain This important handbook gives developmental context to ADHD by describing how symptoms at preschool onset differ from those of older age at onset Clinicians will find practical help for patients whose ADHD appears in conjunction with 11 other syndromes from mood disorders to developmental coordination disorder and acquire valuable guidance on adapting and adjusting medications and other interventions to optimize treatment effects for the wide diversity of complex cases that embody ADHD

Neural basis of reading acquisition and reading disability Li-Hai Tan, Charles A. Perfetti, Johannes Ziegler, Bruce D. McCandliss, 2023-07-04 **Acquired Aphasia in Children** Isabel Pavão Martins, A. Castro-Caldas, Hugo R. van Dongen, Anne van Hout, 1991-07-31 One of the most fascinating problems in Behavioural Neurology is the question of the cerebral organization for language during childhood Acquired aphasia in children albeit rare is a unique circumstance in which to

study the relations between language and the brain during cerebral maturation Its study further contributes to our understanding of the recovery processes and brain plasticity during childhood But while there is a great amount of information and experimental work on brain behaviour relationships in adult subjects the literature about the effects of focal brain lesions in children is both exiguous and scattered throughout scientific journals and books We felt it was time to organize a meeting where scientists in this field could compare their experiences and discuss ideas coming from different areas of research A workshop on Acquired Aphasia in Children was held in Sintra Portugal on September 13 15 1990 and attended by 44 participants from 13 different countries The atmosphere was relaxed and informal and the group was kept small to achieve this effect It was a very lively and pleasant meeting Some consensus was indeed arrived at concerning methodological problems definition of terms and guidelines for future research The main contributions are collected in this book which we hope will serve the scientific community as a reference work on Childhood Aphasia I P M A C C **The Psychological Assessment of Reading** John R.
