Organizations and Strategies in Astronomy Andre Heck,2012-12-06 Seated in a sun lit corner of his 17th century Dutch house his hand touching a celestial globe Johannes Vermeer s Astronomer seems to ponder about the mysteries of the universe We might make the trip to Paris and ask him in the Louvre what precisely is on his mind Unfortunately there will be no answer But we do know what his mind was not on It was not on the approaching deadlines for the proposals he would have to write for getting funds and telescope time not on the meeting of the observing programs committee not on his refereeing duty for the journal Astronomy Astrophysics nor on his university s tightening budget for science In the Kapteyn Institute at Groningen I stand face to face with the impressive portrait of J C Kapteyn painted in the year 1918 Seated at his desk he is doing his calculations with pen pencil and tables perhaps checking the work of his skilled staff of human computers Early in his career he had completed his magnum opus the Cape Photographic Durchmusterung in collaboration with his close friend David Gill at Capetown South Africa Publications of the Astronomical Laboratory at Groningen Rijksuniversiteit te Groningen. Sterrekundig laboratorium,1914 **Research on Solar Heat and Its Absorption by the Earth's Atmosphere** Samuel Pierpont Langley,1884 Instrumentation and Research Programmes for Small Telescopes J.B. Hearnshaw,P.L. Cottrell,2012-12-06 This volume is the proceedings of IAU Symposium No 118 on Instrumentation and Research Programmes for Small Telescopes where small telescopes were defined as those ground based instruments with

apertures less than 1.5 m. The scientific goal of the symposium was to emphasise research programmes which were more suited to smaller telescopes on which frequent regular observations can be made. A wide variety of topics on instrumentation, photometry, spectroscopy and polarimetry of objects in the solar system to extragalactic systems were discussed. Each of the four scientific days of the symposium comprised a number of invited review papers, contributed oral papers and discussion sessions devoted purely to the large number of poster papers. An introductory paper on the research potential of small telescopes sets the scene for the symposium. The proceedings have then been divided into three sections: Section I Telescopes and instrumentation; Section II Photometric research programmes; Section III Spectroscopic research programmes. The diversity of topics within each of these sections indicated the extent to which small telescopes have and can contribute greatly to astronomical research. Dr J. A. Graham's summary of the symposium, which illustrates the opportunities available with small telescopes, concludes these proceedings. As in all symposia, the importance of the discussion following each paper was realised. The discussion was recorded on tape and wherever possible on questions and answer sheets transcribed and then edited.

Publications of the Astronomical Laboratory at Groningen, 1909 *The Impact of Long-Term Monitoring on Variable Star Research* C. Sterken, Mart de Groot, 2012-12-06. Long-term monitoring is of fundamental significance in solving many important problems in astrophysics and furthermore has unequalled value in extending observational runs with small telescopes for the education of young astronomers in order to teach them how to secure high-quality observational data over many years. *The Impact of Long-Term Monitoring on Variable Star Research* contains reports based on the analysis of data collected in the visible, IR and radio measurement ranges as well as the design and history of well-known photometric systems. Though the reporting of novel results forms an important part of the book, there are also reports of eight discussion sessions covering more general areas such as extinction monitoring, the problems of archival storage of astronomical data, service observation, the role played by long-term monitoring in graduate teaching and thesis supervision, the interplay between the great observational effort and theory, the contribution of LTM to new knowledge of fundamental data and the increasing decommissioning of telescopes of modest aperture.

Researches in Stellar Photometry John A. Parkhurst, 2017-10-13. Excerpt from *Researches in Stellar Photometry During the Years 1906-1916*. Made chiefly at the Yerkes Observatory. The problems of stellar photometry are closely connected with many cosmic questions, primarily with the light changes of variable stars, but they have an equally important bearing on the questions of stellar distribution and evolution. It has been said by good authorities that it is of more importance to measure the light than the place of a star, and if one considers merely the astonishing number of variable stars now being discovered, it will be admitted that the importance of stellar photometry can scarcely be overestimated. The material here submitted is the natural outgrowth of the writer's variable star work, the plans being extended as the instrumental and other facilities were improved.
