timely volume summarizes the experiences of leading behavioral and social scientists from Europe and the US who collected data using the Internet. Some chapters present theory, methodology, design and implementation, while others focus on best practice examples and/or issues such as data quality and understanding paradata. A number of contributors applied innovative Web-based research methods to the LISS panel of CentERdata collected from over 5,000 Dutch households. Their findings are presented in the book. Some of the data is available on the book website. The book addresses practical issues such as data quality, how to reach difficult target groups, how to design a survey to maximize response and ethical issues that need to be considered. Innovative applications such as the use of biomarkers and eye tracking techniques are also explored. Part 1 provides an overview of Internet survey research, including its methodologies, strengths, challenges and best practices. Innovative ways to minimize sources of error are provided, along with a review of mixed mode designs, how to design a scientifically sound longitudinal panel and avoid sampling problems, and address ethical requirements in Web surveys. Part 2 focuses on advanced applications, including the impact of visual design on the interpretability of survey questions, the impact survey usability has on respondents' answers, design features that increase interaction, and how Internet surveys can be effectively used to study sensitive issues. Part 3 addresses data quality, sample selection, measurement and non-response error, and new applications for collecting online data. The issue of underrepresentation of certain groups in Internet research and the measures most effective at reducing it are also addressed. The book concludes with a discussion of the importance of paradata and the Web data collection process in general, followed by chapters with innovative experiments using eye tracking techniques and biomarker data. This practical book appeals to practitioners from market survey research institutes and researchers in disciplines such as psychology, education, sociology, political science, health studies, marketing, economics and business who use the Internet for data collection, but is also an ideal supplement for graduate and/or upper level undergraduate courses on Internet research methods and/or data collection taught in these fields. **SAGE Internet**

Research Methods Jason Hughes, 2012-06-25. Historically, social researchers have shown a willingness to exploit new technologies to enhance, facilitate and support their various activities. However, arguably no other technological development has influenced the landscape of social research as rapidly and fundamentally as the Internet. This collection avoids both uncritical embrace and wholesale dismissal by considering some of the key literature in the field of Internet research methods. Volume One: Core Issues, Debates and Controversies in Internet Research introduces themes and issues that run across all four volumes, such as epistemology, ontology and methodology in the online world, access, social divisions and the digital divide, and the ethics of online research. Volume Two: Taking Research Online: Internet Survey and Sampling addresses the range of resources, digital archives and Internet-based data sources that exist online, from relatively straightforward and practical guides to such material through to more polemical pieces which consider problems relating to the use, access and analysis of online data and resources. Volume Three: Taking Research Online: Qualitative Approaches considers the broad

range of approaches to conducting researching via or in the Internet The focus is on conventional methods that have been taken online and which in doing so have become transformed in scope and character Volume Four Research On and In the Internet Investigating the Online World follows logically from that which precedes it in exploring how social research has been taken online not simply through the deployment of existing methods and techniques via the Internet but in researchers increasing recognition and investigation of the online world as a sphere of human interaction a socio cultural arena to be explored from the desktop as it were

Thick Big Data Dariusz Jemielniak,2020-03-25 The social sciences are becoming datafied The questions once considered the domain of sociologists are now answered by data scientists operating on large datasets and breaking with methodological tradition for better or worse The traditional social sciences such as sociology or anthropology are under the double threat of becoming marginalized or even irrelevant both from new methods of research which require more computational skills and from increasing competition from the corporate world which gains an additional advantage based on data access However unlike data scientists sociologists and anthropologists have a long history of doing qualitative research The more quantified datasets we have the more difficult it is to interpret them without adding layers of qualitative interpretation Big Data therefore needs Thick Data This book presents the available arsenal of new methods and tools for studying society both quantitatively and qualitatively opening ground for the social sciences to take the lead in analysing digital behaviour It shows that Big Data can and should be supplemented and interpreted through thick data as well as cultural analysis Thick Big Data is critically important for students and researchers in the social sciences to understand the possibilities of digital analysis both in the quantitative and qualitative area and to successfully build mixed methods approaches
