HUMAN RESOURCE MANAGEMENT IN THE DIGITAL AGE Dr. Amit Onkarnath Yadav, Dr. Pragya B. Verma, Dr.

Megha Kala, Ms. Anuradha Shukla, Human Resource Management HRM is only one of the many fields that has undergone significant change as a result of the influence that the digital age has had on the operations of businesses. In order to achieve success in the current climate, people working in human resources need to be able to adjust to new challenges and opportunities. The incorporation of technology and automation into every aspect of business operations is deeply ingrained. Because of the trend toward a digital first workplace, the key functions of human resources such as recruiting, training, performance assessment, and corporate culture are undergoing significant changes. When I was younger, I thought of human resources as primarily an administrative department that was in charge of things like payroll, benefits administration, and policy enforcement. Nevertheless, with the proliferation of digital technologies like data analytics, machine learning, and artificial intelligence, the field of human resources has evolved into a profession that is driven by data and uses strategic thinking. Increasingly, human resources teams are able to automate monotonous operations with the help of digital platforms. This enables them to spend more time on strategic initiatives like leadership development, employee engagement, and talent acquisition. The duty of guaranteeing the health and happiness of their workers, regardless of where they are physically located, is an additional one that falls on the shoulders of human resource managers. This role is becoming more crucial in this day and age of remote work and global teams. As a consequence of the digital revolution, human resources HR is confronted with a number of new challenges, including the management of employee expectations in a workforce that is proficient in technology, the maintenance of data security, and the navigation of the ethical implications of using artificial intelligence AI for decision making in recruitment and employee evaluation. Professionals working in human resources need to be able to think quickly, be familiar with technology, and be keen to accept new technologies in order to stay up with the competition.
