## ✕ Speech and Other Respiratory Movements

- ✕ Expressing Emotion
- ✕ Coughing/sneezing
- ✕ Crying
- ✕ Sighing
- ✕ Yawning
- ✕ Laughing
- ✕ Hiccups- sudden inhalations that make your diaphragm contract.
  - ✕ When the diaphragm contracts, the air passageway between the vocal cords closes, creating the sound of a hiccup.
  - ✕ Hiccups can be caused by eating too fast, stress, and sudden temperature change.

## **Respiration And Emotion:**

*Respiration and Emotion* Y. Haruki, I. Homma, A. Umezawa, Y. Masaoka, 2011-06-28 Gasps sighs and yawns are recognized by even a casual observer as involuntary expressions of emotion through the medium of respiration In recent years scientific observation has focused on sensation and behavior as researchers investigate the relation of emotion and stress in disorders such as asthma hyperventilation and panic disorder Until now however the interplay of psychological factors and physiological responses has not been approached from the interdisciplinary perspective reported in this book Brought together here is the work of physiologists psychologists and researchers in behavioral medicine together with for the first time specialists and practitioners of traditional Japanese arts and culture Knowledge of the art and control of breathing which are essential features of such disciplines as Zen and Noh opens a new and until now unexplored path for scientists seeking to understand the relation between respiration and emotion      **Respiration and Emotion in Pigeons** John Edward Rouse, 1905      **Breathing, Emotion and Evolution**, 2014-09-04 Respiration is one of the most basic motor activities crucial for survival of the individual It is under total control of the central nervous system which adjusts respiratory depth and frequency depending on the circumstances the individual finds itself For this reason this volume not only reviews the basic control systems of respiration located in the caudal brainstem but also the higher brain regions that change depth and frequency of respiration Scientific knowledge of these systems is crucial for understanding the problems in the many patients suffering from respiratory failure This well established international series examines major areas of basic and clinical research within neuroscience as well as emerging subfields      *The Psychobiology of Emotions* Jack George Thompson, 2013-06-29 Regardless of culture most adult humans report experiencing similar feelings such as anger fear humor and joy Such subjective emotional states however are not universal Members of some cultures deny experiencing specific emotions such as fear or grief Moreover within any culture individuals differ widely in their self reports of both the variety and intensity of their emotions Some people report a vivid tapestry of positive and negative emotional experiences Other people report that a single emotion such as depression or fear totally dominates their existences Still others report flat and barren emotional lives Over the past 100 years scientists have proposed numerous rival explanations of why such large individual differences in emotions occur Various authors have offered anthropological biochemical ethological neurological psychological and sociological models of human emotions Indeed the sheer number of competing theories precludes a comprehensive review in a single volume Accordingly only a representative sample of models are discussed in this book and many equally important theories have been omitted These omissions were not intended to prejudice the reader in favor of any particular conceptual framework Rather this selective coverage was intended to focus attention upon the empirical findings that contemporary theories attempt to explain      **Respiratory Neurobiology**, 2022-08-12 Respiratory Neurobiology Physiology and Clinical Disorders Part One Volume 188 is one of two volumes on the neurology of breathing

*Mechanisms Underpinning the Link between Emotion, Physical Health and Longevity* Andrew H. Kemp,2017-09-13 The 1990 s was designated as the decade of the brain and now common mental disorders are described as brain disorders Yet intense research interest on the brain has largely side lined the body as a passive observer disconnecting mental from physical health and contributing to further societal stigma on the nature of psychiatric illness and mental distress The biopsychosocial pathway to premature mortality or longevity is a complex one involving a host of closely intertwined mechanisms and moderating factors some of which are investigated in this special issue All the articles published here provide new insights into the pathways linking emotion physical health and longevity highlighting the tight linkage between mind brain and body

**The Journal of Comparative Neurology and Psychology**, 1905 Journal of Comparative Neurology, 1905 **Behavioral and Psychological Approaches to Breathing Disorders** R. Ley, B.H. Timmons, 2013-06-29 We start life with a breath and the process continues automatically for the rest of our lives Because breathing continues on its own without our awareness it does not necessarily mean that it is always functioning for optimum mental and physical health The opposite is true often The problem with breathing is that it seems so easy and natural that we rarely give it a second thought We breathe we inhale we exhale What could be simpler But behind that simple act lies a process that affects us profoundly It affects the way we think and feel the quality of what we create and how we function in our daily life Breathing affects our psychological and physiological states while our psychological states affect the pattern of our breathing For example when anxious we tend to hold our breath and speak at the end of inspiration in a high pitched voice Depressed people tend to sigh and speak at the end of expiration in a low toned voice A child having a temper tantrum holds his or her breath until blue in the face Hyperventilation causes not only anxiety but also such a variety of symptoms that patients can go from one specialty department to another until a wise clinician spots the abnormal breathing pattern and the patient is successfully trained to shift from maladaptive to normal breathing behavior

**The Feeling Body** Giovanna Colombetti, 2017-06-30 A proposal that extends the enactive approach developed in cognitive science and philosophy of mind to issues in affective science In *The Feeling Body* Giovanna Colombetti takes ideas from the enactive approach developed over the last twenty years in cognitive science and philosophy of mind and applies them for the first time to affective science the study of emotions moods and feelings She argues that enactivism entails a view of cognition as not just embodied but also intrinsically affective and she elaborates on the implications of this claim for the study of emotion in psychology and neuroscience In the course of her discussion Colombetti focuses on long debated issues in affective science including the notion of basic emotions the nature of appraisal and its relationship to bodily arousal the place of bodily feelings in emotion experience the neurophysiological study of emotion experience and the bodily nature of our encounters with others Drawing on enactivist tools such as dynamical systems theory the notion of the lived body neurophenomenology and phenomenological accounts of empathy Colombetti advances a novel approach to these traditional issues that does justice to their complexity Doing so she also expands the enactive approach into a further domain of inquiry one that has more generally been neglected by the embodied embedded approach in the philosophy of cognitive science
