Respiratory Burst And Its Physiological Significance:

The Respiratory Burst and Its Physiological Significance A.J. Sbarra,R.R. Strauss,2012-12-06 When phagocytes are exposed to a number of different stimuli they undergo dramatic changes in the way they process oxygen Oxygen uptake increases markedly frequently more than 50 fold the phagocytes begin to produce large quantities of superoxide and hydrogen peroxide and they immediately begin to metabolize large amounts of glucose by way of the hexose monophosphate shunt This series of changes has become known as the respiratory burst It was first believed that the major function of this respiratory burst was to generate powerful antibacterial agents by the partial reduction of oxygen It is becoming apparent that the respiratory burst has much wider application and its physiological function in many different biological areas is clear In this volume we have attempted to bring together the work of experts who have published extensively on the involvement of the respiratory burst in different physiological functions In the first three chapters Dr Borregaard and Dr Berton and co workers and Dr Roos and co workers bring together what is known about the respiratory burst They present up to date versions of the biochemical and metabolic activities associated with the burst In Chapter 4 Dr Styrt and Dr Klempner discuss the respiratory burst as it affects cellular ion homeostasis Dr Cohen and Dr Britigan Chapter 5 present some interesting data on the competition between the respiratory burst and bacteria for oxygen Dr Dobrina and Dr

was hosted by the Center for Toxicology at the University of Arizona and convened in Tucson Arizona January 14 17 1990 Over 300 people attended There were 60 platform presentations by invited speakers and 96 volunteer communications in the form of posters were offered These meetings have grown from a small group of scientists working in closely related areas to a major international series of symposia which convene every five years to review and place in context the latest advances in our understanding of the formation fate and consequences of biological reactive intermediates The Organizing Committee Allan H Conney Robert Snyder Co chairman and Charlotte M Witmer Rutgers University Piscataway NJ David J Jollow Co chairman Medical University South Carolina Charleston SC 1 Glenn Sipes Co chairman University of Arizona Tucson AZ James J Kocsis and George F

and expanded the scientific base of clinical chemistry These volumes clarify the areas of molecular biology informatics and the monitoring of physiological parameters in critical situations as they pertain to clinical chemistry Each volume of **Advances in Clinical Chemistry** contains an index and each chapter includes references **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 **Luminescence Biotechnology** Knox Van Dyke, Christopher Van Dyke, Karen Woodfork, 2001-12-20 The dangers and drawbacks inherent in radioactivity based methods along with a demonstrated and dramatic increase in sensitivity have precipitated a major shift towards luminescence measurements and visualization techniques Their use has now spread even to traditional clinical environments and their applications have grown from clinical assays to **Advances in Structural Biology** S.K. Malhotra, 1996-06-21 The present volume continues the trend established in previous volumes in this series on **Advances in Structural Biology** As in the past diverse topics of current importance relevant to the theme of the series are included in the fourth volume **Journal of Nutritional Immunology**, 1994 *N-Oxidation of Drugs* P. NETosis 2: The Excitement Continues Mariana J. Kaplan, Marko Radic, Martin Herrmann, 2017-12-28 NETosis a form of cell death that manifests by the release of decondensed chromatin to the extracellular space provides valuable insights into mechanisms and consequences of cellular demise Because extracellular chromatin can immobilize microbes the extended nucleohistone network was called a neutrophil extracellular trap NET and the process of chromatin release was proposed to serve an innate immune defense function Extracellular chromatin NETs were initially observed in studies of neutrophils and are most prominent in these types of granulocytes Subsequent studies showed that other granulocytes and in a limited way other cells of the innate immune response may also release nuclear chromatin following certain kinds of stimulation Variations of NETosis were noted with cells that remain temporarily motile after the release of chromatin Numerous stimuli for NETosis were discovered including bacterial breakdown products inflammatory stimuli particulate matter certain crystals immune complexes and activated thrombocytes Fundamental explorations into the mechanisms of NETosis observed that neutrophil enzyme activity PAD4 neutrophil elastase proteinase 3 and myeloperoxidase and signal transduction pathways contribute to the regulation of NETosis Histones in NET chromatin become modified by peptidylarginine deiminase 4 PAD4 and cleaved at specific sites by proteases leading to extensive chromatin externalization In addition NETs serve for attachment of bactericidal enzymes including myeloperoxidase leukocyte proteases and the cathelicidin LL 37 NETs are decorated with proteases and may thus contribute to tissue destruction However the attachment of these enzymes to NET associated supramolecular structures restricts systemic spread of the proteolytic activity While the benefit of NETs in an infection appears obvious NETs also participate as key protagonists in various pathologic states Therefore it is essential for NETs to be efficiently cleared otherwise digestive enzymes may gain access to tissues where inflammation takes place Persistent NET exposure at sites of inflammation may lead to a further complication NET antigens may provoke acquired immune responses and over time could initiate autoimmune reactions serve as antigen for nuclear autoantibodies and foster DNA immune complex related inflammation Neutrophil products and deiminated proteins comprise an important group of autoantigens in musculoskeletal disorders Aberrant NET synthesis and or clearance are often associated with inflammatory and autoimmune conditions Recent evidence also implicates aberrant NET formation in the development of endothelial damage atherosclerosis and thrombosis Intravital microscopy provides evidence for conditions that induce NETosis in vivo Furthermore NETs can easily be detected in synovial fluid and tissue sections of patients with arthritis and gout NETosis is thus of interest to researchers who investigate innate immune responses host pathogen interactions chronic inflammatory disorders cell and vascular biology biochemistry and autoimmunity As we enter the second decade of research on NETosis it is useful and timely to review the mechanisms and pathways of NET formation their role in bacterial and fungal defense and

their importance as inducers of autoimmune responses
