Respiratory Infections A Scientific Basis For Management:

Respiratory Infections Lionel Mandell, Mark Woodhead, Santiago Ewig, Antoni Torres, 2006-10-27 The aim of the volume is to provide an authoritative and international treatise bringing together current knowledge in the field of respiratory infection. The book will be organised by presentation rather than causative organism a differentiating feature from the existing competition and will be divided into four parts: General Issues, Community acquired Infections, Nosocomial Infections and Respiratory Infection in Immunocompromised Patients. Each chapter will conclude with a summary highlighting practical take home messages regarding patient management for the reader. It will be highly illustrated including colour plates where appropriate. The principal market will be pulmonologists with a specialist interest in this area and infectious disease specialists but that the text will also be of interest to clinical researchers and a useful library reference. Michael S. Niederman, George A. Sarosi, Jeffrey Glassroth, 1994 *Mechanisms and Management of COPD Exacerbations* L. Allegra, F. Blasi, 2000-06 Chronic obstructive pulmonary disease (COPD) is an increasingly important health problem world wide. Whereas most other leading diseases have shown a decline in the past decades, COPD morbidity and mortality is on a steady increase. Exacerbations are usually defined as an increase in cough, a change in the colour or quantity of sputum and a worsening dyspnea. The role of bacterial infections and the efficacy of antimicrobial therapy in acute exacerbations of chronic bronchitis/AECB is still controversial. Exacerbations of chronic bronchitis are a common occurrence in clinical practice and are a leading cause of antibiotic prescription among respiratory infections. It is still uncertain whether each new exacerbation may deteriorate the natural history of chronic bronchitis. Undoubtedly every episode includes a temporary worsening in lung function and may therefore pose the threat of respiratory failure or death in more severely obstructed patients.

Infectious Diseases in Critical Care Medicine Burke A. Cunha, 1998-05-27 This invaluable clinical guide offers the only reference on infectious diseases encountered in intensive care patients, discussing infectious disease problems in the critical care unit and therapy. No other book describes in practical terms the mimics of infection and how to differentiate colonization from infection. Written by internationally renowned experts, *Infectious Diseases in Critical Care Medicine* differentiates between sepsis and conditions that can imitate sepsis, highlights key diagnostic findings in all major infectious disease problems in critical care, includes practical infection control measures, provides easy to use recommendations on empiric antibiotic therapy, furnishes a simple effective method of adjusting drug doses in patients with abnormal hepatic and kidney function, presents strategies for controlling resistance in critical care. With over 2500 bibliographic citations and more than 200 tables, drawings, photographs, micrographs and x-rays, *Infectious Diseases in Critical Care Medicine* is an indispensable resource for infectious disease specialists, intensive and critical care physicians, pulmonologists, primary care physicians, internists, hospitalists, medical house officers and pulmonary critical care and infectious disease fellows.
