Responding To Defense Dependence:

Knowledge Regulation and National Security in Postwar America Mario Daniels, John Krige, 2022-04-25 The first historical study of export control regulations as a tool for the sharing and withholding of knowledge In this groundbreaking book Mario Daniels and John Krige set out to show the enormous political relevance that export control regulations have had for American debates about national security foreign policy and trade policy since 1945 Indeed they argue that from the 1940s to today the issue of how to control the transnational movement of information has been central to the thinking and actions of the guardians of the American national security state The expansion of control over knowledge and know how is apparent from the increasingly systematic inclusion of universities and research institutions into a system that in the 1950s and 1960s mainly targeted business activities As this book vividly reveals classification was not the only and not even the most important regulatory instrument that came into being in the postwar era

Investigating the Elements of Plant Defense Mechanisms Within Plant Immune Responses Against Pathogens Katarzyna Otulak-Kozieł, Edmund Kozieł, Jozef Julian Bujarski, 2024-11-11 Biotic stress can increase or reduce a plant's susceptibility to specific pathogens A wide range of plant pathogens i.e. viruses bacteria and fungi causing diseases modulate different elements of plant defense mechanisms responses that influence disease and the physiological state of host plants Nevertheless plant hosts are not static and defenseless Plants have developed active and dynamic complex defense mechanisms to protect themselves against different pathogenic stressors Plants defense mechanisms consist of multi elements and can be determined by pre formed natural barriers or inducible defense responses directly activated upon detection of a pathogen The inducible response is defined as basal resistance or innate immunity and is regulated by signal transduction and transcriptional networks Moreover plant responses to pathogens are finely tuned and complex at the immune receptor cellular proteome epigenetic and transcriptome levels We can tell that a sophisticated molecular arms race is taking place in the biological co evolution of plant pathogen interactions especially in developing novel elements involved in this interaction Therefore a comprehensive understanding of the broad spectrum and underlying elements of defense mechanisms in the interactions between plants and their pathogenic enemies will improve plant resistance to pathogens

Molecular Plant Immunity Guido Sessa,2013-01-04 Molecular Plant Immunity provides an integrated look at both well established and emerging concepts in plant disease resistance providing the most current information on this important vitally important topic within plant biology Understanding the molecular basis of the plant immune system has implications on the development of new varieties of sustainable crops understanding the challenges plant life will face in changing environments as well as providing a window into immune function that could have translational appeal to human medicine Molecular Plant Immunity opens with chapters reviewing how the first line of plant immune response is activated followed by chapters looking at the molecular mechanisms that allow fungi bacteria and oomycetes to circumvent those defenses Plant resistance proteins which provide the second line of plant immune defense are then covered followed by chapters on the role of hormones in immunity and the mechanisms that modulate specific interaction between plants and viruses The final chapters look at model plant pathogen systems to review interaction between plants and fungal bacterial and viral pathogens Written by a leading team of international experts Molecular Plant Immunity will provide a needed resource to diverse research community investigated plant immunity

Catalog of Federal Domestic Assistance ,2007 Identifies and describes specific government assistance opportunities such as loans grants counseling and procurement contracts available under many agencies and programs *Induced plant responses to microbes and insects* Corné M. J. Pieterse,Marcel Dicke,Saskia C. M. Van Wees,Erik H. Poelman,2014-04-14 Plants are members of complex communities and interact both with antagonists and beneficial organisms An important question in plant defense signaling research is how plants integrate signals induced by pathogens insect herbivores and

beneficial microbes into the most appropriate adaptive response Molecular and genomic tools are now being used to uncover the complexity of the induced defense signaling networks that have evolved during the arms races between plants and the other organisms with which they intimately interact To understand the functioning of the complex defense signaling network in nature molecular biologists and ecologists have joined forces to place molecular mechanisms of induced plant defenses in an ecological perspective In this Research Topic we aim to provide an on line open access snapshot of the current state of the art of the field of induced plant responses to microbes and insects with a special focus on the translation of molecular mechanisms to ecology and vice versa
