Responsive Environments:

Responsive Environments Ian Bentley, 1985 The authors first examine what is meant by the concept of a responsive environment and then provide an illustrated step by step guide on how to achieve it in real life design The book demonstrates the specific characteristics that make for comprehensible and controllable places

Responsive Environments Allen Sayegh, Stefano Andreani, Harvard REAL Lab, 2020-02-08 The entanglement of physical contexts with digital environments is constantly changing our relationship with the surrounding space and creating new hybrid experiences These transformations pose complex design challenges and yet offer novel opportunities for the understanding and development of human centered built environments Drawing from a 5 year design research collaboration between the REAL Lab at Harvard GSD and the University of Bergamo this book unfolds the experiential facets of our technologically mediated relationship with space in the fields of architecture urbanism and art The book attempts to describe what makes an environment responsive in the form of a design manifesto introducing ten attributes or principles at both methodological and experiential levels Critically articulated from the perspective of leading experts scholars and professionals the ideas explored are unpacked through speculative urban visions and design concepts at different timeframes contexts and scales ranging from smart artifacts to smart cities

EcoResponsive Environments Ian Bentley, Soham De, Sue McGlynn, Prachi Rampuria, 2024-04-15 EcoResponsive Environments integrates our current knowledge of designing for human needs with a deeper understanding of natural systems The book offers both a call to action and a comprehensive yet pragmatic framework for practising the art and science of settlement design called EcoResponsive Design Bridging the gap between theory and generic policy on the one hand and design for specific places and sites on the other the book is aimed not only at the professionals involved in planning designing and developing these places but also the wider range of communities interested in creating better spaces for our everyday lives EcoResponsive Design encompasses all scales ranging from the overall form of settlements and the landscapes in which they sit to buildings and the detailed design of public spaces Drawing from projects places and best practices in many different countries and contexts across the world it demonstrates how positive changes at the local scale can be achieved for every single site large or small The book urges a shift in focus from individual specialisms to collaborative actions enabling development stakeholders to negotiate a balance between short term financial viability and longer term environmental and social values

Responsive Environments Ian Bentley, 2001-02 Clearly demonstrates the specific characteristics that make for comprehensible friendly and controllable places Responsive Environments as opposed to the alienating environments often imposed today By means of sketches and diagrams it shows how they may be designed in to places or buildings This is a practical book about architecture and urban design It is most concerned with the areas of design which most frequently go wrong and impresses the idea that ideals alone are not enough Ideals must be linked through appropriate design ideas to the fabric of the built environment itself This book is a practical attempt to show how this can be

done Explore what is meant by the concept of a responsive environment Illustrated step by step guide shows you how to achieve a responsive environment in real life design The Design Dimension of Planning John Punter, Matthew Carmona, 1997 With design quality of increasing importance to the public consumers developers and their clients and high on the agenda of the Secretary of State this book makes an important practical contribution to improving design control

Unencumbered Human Movement in Interactive Immersive Environments Garth Paine, 2009 This book outlines six interactive installation works that form a body of research concerned with the development of interactive responsive installation works that use the gestures of the unencumbered human body as their central activation and control mechanism They are therefore an exploration of interactivity interface technologies and approaches to mapping the sensed data derived from movement in the installation space onto sound and vision generation schemes I have conditioned this exploration with a desire to produce art installations three dimensional environments that occupy an entire gallery space The installations were intended to be immersive and to engage the inhabitant in a direct visceral and dynamic way It was intended that the visitor to the installation would require no prior knowledge of the system and additionally would require no knowledge of musical practice or the visual arts *Responsive Environments* Allen Sayegh, Stefano Andreani, Harvard Real Lab, 2021-09 The entanglement of physical contexts with digital environments is constantly changing our relationship with the surrounding space and creating new hybrid experiences 00These transformations pose complex design challenges and yet offer novel opportunities for the understanding and development of human centered built environments Drawing from a 5 year design research collaboration between the REAL Lab at Harvard GSD and the University of Bergamo this book unfolds the experiential facets of our technologically mediated relationship with space in the fields of architecture urbanism and art 00The book attempts to describe what makes an environment responsive in the form of a design manifesto introducing ten attributes or principles at both methodological and experiential levels Critically articulated from the perspective of leading experts scholars and professionals the ideas explored are unpacked through speculative urban visions and design concepts at different timeframes contexts and scales ranging from smart artifacts to smart cities *Virtual Environments '95* Martin Göbel, 2012-12-06 Virtual Environments VE the new dimension in man machine communication have been developed and experienced in Europe since 1990 In early 1993 the Eurographics Association decided to establish a working group on Virtual Environments with the aim to communicate advances in this fascinating area on a scientific and technical level In September 1993 the first workshop on VEs was held in Barcelona Spain in conjunction with the annual Eurographics conference The workshop brought together about 35 researchers from Europe and the US The second workshop was held together with Imagina 95 in Monte Carlo Monaco This time around 40 researchers from Europe the US but also from Asia met for a 2 day exchange of experience Needless to say as in all Eurographics workshops we found the atmosphere very open and refreshing The workshops were sponsored by ONR Office of Naval Research UK US Army Research Institute UK

University of Catalonia Spain EDF France CAE France INA France and IGD Germany and locally organized by Daniele Tost and Jaques David While in the first workshop in 1993 many concepts in VE were presented the 95 workshop showed up various applications in different areas and demonstrated quite clearly that Virtual Environments are now used in interactive applications
