

Restorative Neurology of Spinal Cord Injury

Edited by Milan R. Dimitrijevic, Byron A. Kakulas, W. Barry McKay, and Gerta Vrbová

Following injury or disease, neural circuitry can be altered, leading to highly individualized characteristics that may or may not resemble original function. To date, the majority of approaches used to treat neurological dysfunction have focused on the replacement of lost or damaged function. *Restorative Neurology of Spinal Cord Injury* offers a new and novel approach.

Focusing on the spinal cord and its role in motor control, this book details the clinical and neurophysiological assessment methods developed throughout the past half-century, as well as the conduction and processing performed within the surviving neural circuitry. Based on the results of such assessment, treatment strategies are applied to augment, rather than replace, the performance of surviving neural circuitry and improve the functional capacity of people who have experienced spinal cord injury.

"This 'state of the art' book on restorative neurology of spinal cord injury deals with an interesting and timely topic...The last decade has seen an impressive evolution from the important but limited clinico-pathological correlations to a list of evaluations and interventions...This book gives a good overview of all that has become available for treatment and research. It illustrates how this knowledge can be clinically put into practice. The evolution will not stop today and it is certain that further steps will be made in the new perspective presented here, for the benefit of those who suffer such injury."

Restorative Neurology:

Principles and Practice of Restorative Neurology Robert R Young, Paul J Delwaide, 2013-10-22 Principles and Practice of Restorative Neurology is a collection of topics in clinical neurology where progress through research has brought concepts of patient management. The collection emphasizes research done clinically and in experimental laboratories and attempts to discuss restorative neurology in the larger context encompassing biology, neurobiology, and rehabilitative engineering. The book discusses the concept that neurology should be more therapeutic instead of being just diagnostic because of advances in techniques and drugs. An epidemiology of disability and the evaluation of restorative neurology are explained. The text also presents the developments in the pharmacotherapy of major neurological disorders such as Parkinson's disease, dementia, and stroke. The use of biomechanical or rehabilitation engineering to treat impaired or lost functions in a patient is compared to the feedback mechanisms and the kinds of treatment including microsurgery, neurostimulation, methods surgery, and molecular genetics that are applied to specific disorders. These are discussed extensively. The book also reviews the approaches of gene correction for disorders in the central nervous system. Finally, the future needs of neurology in terms of diagnosis and treatments are dealt with as more research techniques and drugs are being discovered and proved useful. The collection is intended for neurologists, neurologists in training, and other physicians whose work lies with neurological disorders. The book can also prove useful for practitioners and academicians in the fields of neurosurgery, internal medicine, psychiatry, and rehabilitation medicine.

Restorative Neurology of Spinal Cord Injury Milan R. Dimitrijevic, 2012-01-12 Following injury or disease, neural circuitry can be altered to varying degrees, leading to highly individualized characteristics that may or may not resemble original function. In addition, lost or partially damaged circuits and the effects of biological recovery processes, coupled with learned compensatory strategies, create a new neuroanatomy with capabilities that are often not functional or may interfere with daily life. To date, the majority of approaches used to treat neurological dysfunction have focused on the replacement of lost or damaged function, usually through the suppression of surviving neural activity and the application of mechanical assistive devices. *Restorative Neurology of Spinal Cord Injury* offers a different and novel approach. Focusing on the spinal cord and its role in motor control, the book details the clinical and neurophysiological assessment process and methods developed throughout the past half century by basic and clinical scientists. Then, through the use of specialized clinical and neurophysiological testing methods, conduction and processing performed within the surviving neural circuitry is examined and characterized in detail. Based on the results of such assessment, treatment strategies also described in this book are applied to augment rather than replace the performance of surviving neural circuitry and improve the functional capacity of people who have experienced injury to their spinal cords.
