Restoring Diversity Strategies For Reintroduction Of Endangered Plants

Edward O. Guerrant

Restoring Diversity Strategies For Reintroduction Of Endangered Plants:

Restoring Diversity Donald A. Falk, Margaret Olwell, Constance I. Millar, 1996 Topics considered include the strategic and legal context for rare plant restoration the biology of restoration use and misuse of mitigation in rare plant conservation and case studies from across the United States **Restoring Diversity**, In April 1993 a conference of academic biologists agency staff members activists and other experts critically explored the value of ecological restoration as a conservation strategy Restoring Diversity examines and expands on the issues set forth at that gathering including strategy case studies the biology of restoration and the use of mitigation in rare plant conservation Conservation Biology Peggy L.

Fiedler, Peter M. Kareiva, 2012-12-06 Refecting what a new generation of conservation biologists is doing and thinking this vital and far ranging second edition explores where conservation biology is heading It challenges many conventions of conservation biology by exposing certain weaknesses of widely accepted principles Combining contributions from both the school and the new breed of conservation biologists this insightful text focuses primarily on topics the are integral to the daily activities of conservation biologists Several chapters address ecosystem restoration and biotic invasions as well as the the mechanics of population viability analyses which are now a routine facet of conservation efforts A case history approach is implemented throughout the book with the use of practical real world examples Furthermore an in depth look at quantitative analyses is presented allowing for models and mathematical analyses to pinpoint limitations in existing data and guide research toward those aspects of biology that are most likely to be critical to the dynamics of a species or an ecosystem

Ecological Restoration Singarayer Florentine, Paul Gibson-Roy, Kingsley Wayne Dixon, Linda Broadhurst, 2023-06-14 Ecological restoration although a relatively new endeavour compared to other disciplines has gained significant momentum during the last decade as accelerating global change becomes more apparent It is now widely accepted by the scientific community that to avoid further devastating effects of climate change and biodiversity loss humanity must determinedly move more to protect and restore natural ecosystems Many restoration efforts of the past have been ad hoc site and situation specific and have often failed to achieve desired outcomes but over the last decade many countries are allocating increasingly significant amounts of financial investment towards restoration with the goal of achieving more systematic and predictable outcomes Today activities related to restoring ecosystems natural assets and biodiversity are a global focus This

book covers a wide range of topics related to ecological restoration including for grasslands wetlands temperate and tropical forests and arid zones Importantly it also focuses on ecological restoration in human disturbed landscapes such as for urban areas farmlands mine sites and transport corridors It highlights the necessity for evidence based approaches that are both nuanced and complementary with prescriptions for people based restoration that is socially inclusive and cognisant of historic and current community sentiment Ambitious landscape and continental scale targets for ecological restoration have been set across the globe However without practical guidelines developed from restoration evaluations from the recent past to follow future efforts are unlikely to be successful nor expected targets met To that end this book reviews and highlights a large number and variety of restoration stories from around the world Most are presented as reader friendly case studies that feature innovative and systematic techniques for undertaking species rich ecological restoration Together they provide inspiration for current and future professionals and offer unique glimpses into state of the art practice for this critically important discipline *General Technical Report INT. ,1997*

Genetic Diversity and Erosion in Plants M. R. Ahuja, S. Mohan Jain, 2015-11-06 Genetic erosion is the loss of genetic diversity within a species It can happen very quickly due to catastrophic events or changes in land use leading to habitat loss But it can also occur more gradually and remain unnoticed for a long time One of the main causes of genetic erosion is the replacement of local varieties by modern varieties Other causes include environmental degradation urbanization and land clearing through deforestation and brush fires In order to conserve biodiversity in plants it is important to targets three independent levels that include ecosystems species and genes Genetic diversity is important to a species fitness long term viability and ability to adapt to changing environmental conditions Chapters in this book are written by leading geneticists molecular biologists and other specialists on relevant topics on genetic erosion and conservation genetic diversity in plants This divisible set of two volumes deals with a broad spectrum of topics on genetic erosion and approaches to biodiversity conservation in crop plants and trees Volume 1 deals with indicators and prevention of genetic erosion while volume 2 covers genetic diversity and erosion in a number of plants species These two volumes will also be useful to botanists biotechnologists environmentalists policy makers conservationists and NGOs working to manage genetic erosion and biodiversity
