Restricted orientation Convexity:

Restricted-Orientation Convexity Eugene Fink, Derick Wood, 2012-12-06 Restricted orientation convexity is the study of geometric objects whose intersections with lines from some fixed set are connected. This notion generalizes standard convexity and several types of nontraditional convexity. We explore the properties of this generalized convexity in multidimensional Euclidean space, describe restricted orientation analogs of lines, hyperplanes, flats, and halfspaces, and identify major properties of standard convex sets that also hold for restricted orientation convexity. We then introduce the notion of strong restricted orientation convexity, which is an alternative generalization of convexity, and show that its properties are also similar to those of standard convexity. **Canadian Conference on Computational Geometry** Frank Fiala, 1996-08-15 The 8th Canadian conference on computational geometry had an international flavour. Sixty-one papers were submitted by authors from over 20 countries representing four continents. The conference was held at Carleton University in August 1996. **Computational Morphology** G.T. Toussaint, 2014-06-28 Computational Geometry is a new discipline of computer science that deals with the design and analysis of algorithms for solving geometric problems. There are many areas of study in different disciplines which, while being of a geometric nature, have as their main component the extraction of a description of the shape or form of the input data. This notion is more imprecise and subjective than pure geometry. Such fields include cluster analysis in statistics, computer vision, and pattern recognition, and the measurement of form and form change in such areas as stereology and developmental biology. This volume is concerned with a new approach to the study of shape and form in these areas. Computational morphology is thus concerned with the treatment of morphology from the computational geometry point of view. This point of view is more formal, elegant, procedure-oriented, and clear than many previous approaches to the problem, and often yields algorithms that are easier to program and have lower complexity. **Computational Geometry - Methods, Algorithms and Applications** Hanspeter Bieri, 1991-11-13 Radiocarbon After Four Decades: An Interdisciplinary Perspective commemorates the 40th anniversary of radiocarbon dating. The volume presents discussions of every aspect of this dating technique, as well as chronicles of its development and views of future advancements and applications. All of the 64 authors played major roles in establishment, development, or application of this revolutionary scientific tool. The 35 chapters provide a solid foundation in the essential topics of radiocarbon dating: Historical Perspectives, The Natural Carbon Cycle, Instrumentation, and Sample Preparation, Hydrology, Old World Archaeology, New World Archaeology, Earth Sciences, and Biomedical Applications. **Data Structures and Efficient Algorithms** Burkhard Monien, 1992-05-20 Myocarditis and idiopathic dilated cardiomyopathy are being increasingly recognized as important causes of heart disease and heart failure. Immunological mechanisms have long been suspected as playing a role in these diseases, but direct evidence has been lacking. Recently, animal models have become available in which myocarditis can be induced either by infection with cardiotropic viruses or by autoimmunization with heart-specific antigens. This book

presents and analyzes the latest information obtained from experimental models relating it to the practical problems of diagnosis and treatment of myocarditis

Strong Restricted-orientation Convexity Eugene Fink, Derick Wood, 1995 Abstract Strong O convexity is a generalization of standard convexity defined with respect to a fixed set O of hyperplanar orientations We explore the properties of strongly O convex sets in two and more dimensions and develop a mathematical foundation of strong convexity We characterize strongly O convex polytopes flats and halfspaces establish the strong O convexity of the affine hull of a strongly O convex set and describe conditions under which two orientation sets yield the same collection of strongly O convex sets orientation equivalence We identify some of the major properties of standard convex sets that hold for strong O convexity In particular we establish the following results The intersection of a collection of strongly O convex sets is strongly O convex For every point in the boundary of a strongly O convex set there is a supporting strongly O convex hyperplane through it A closed set with a nonempty interior is strongly O convex if and only if it is the intersection of the strongly O convex halfspaces that contain it

Decision Procedures Daniel Kroening, Ofer Strichman, 2008-04-29 A decision procedure is an algorithm that given a decision problem terminates with a correct yes no answer Here the authors focus on theories that are expressive enough to model real problems but are still decidable Specifically the book concentrates on decision procedures for first order theories that are commonly used in automated verification and reasoning theorem proving compiler optimization and operations research The techniques described in the book draw from fields such as graph theory and logic and are routinely used in industry The authors introduce the basic terminology of satisfiability modulo theories and then in separate chapters study decision procedures for each of the following theories propositional logic equalities and uninterpreted functions linear arithmetic bit vectors arrays pointer logic and quantified formulas They also study the problem of deciding combined theories and dedicate a chapter to modern techniques based on an interplay between a SAT solver and a decision procedure for the investigated theory This textbook has been used to teach undergraduate and graduate courses at ETH Zurich at the Technion Haifa and at the University of

Oxford Each chapter includes a detailed bibliography and exercises Lecturers slides and a C library for rapid prototyping of decision procedures are available from the authors website
