Romantic Conception Of Life Science And Philosophy In The Age Of Goethe:

The Romantic Conception of Life Robert J. Richards, 2024-05-31 All art should become science and all science art poetry and philosophy should be made one Friedrich Schlegel's words perfectly capture the project of the German Romantics who believed that the aesthetic approaches of art and literature could reveal patterns and meaning in nature that couldn't be uncovered through rationalistic philosophy and science alone In this wide ranging work Robert J Richards shows how the Romantic conception of the world influenced and was influenced by both the lives of the people who held it and the development of nineteenth century science Integrating Romantic literature science and philosophy with an intimate knowledge of the individuals involved from Goethe and the brothers Schlegel to Humboldt and Friedrich and Caroline Schelling Richards demonstrates how their tempestuous lives shaped their ideas as profoundly as their intellectual and cultural heritage He focuses especially on how Romantic concepts of the self as well as aesthetic and moral considerations all tempered by personal relationships altered scientific representations of nature Although historians have long considered Romanticism at best a minor tributary to scientific thought Richards moves it to the center of the main currents of nineteenth century biology culminating in the conception of nature that underlies Darwin's evolutionary theory Uniting the personal and poetic aspects of philosophy and science in a way that the German Romantics themselves would have honored *The Romantic Conception of Life* alters how we look at Romanticism and nineteenth century biology

Romanticism, Origins, and the History of Heredity Christine Lehleiter, 2014-10-30 At the turn of the eighteenth century selfhood was understood as a tabularasa to be imprinted in the course of an individual's life By the middle of the nineteenth century however the individual had become defined as determined by heredity already from birth Examining novels by Goethe Jean Paul and E T A Hoffmann studies on plant hybridization treatises on animal breeding and anatomical collections *Romanticism Origins and the History of Heredity* delineates how romantic authors imagined the ramifications of emerging notions of heredity for the conceptualization of selfhood Focusing on three fields of inquiry inbreeding and incest cross breeding and bastardization evolution and autopoiesis Christine Lehleiter proposes that the notion of selfhood for which Romanticism has become known was not threatened by considerations of determinism and evolution but was in fact already a result of these very considerations *Romanticism Origins and the History of Heredity* will be of interest for literary scholars historians of science and all readers fascinated by the long dur e of subjectivity and evolutionary thought

Sensibility in the Early Modern Era Anik Waldow, 2018-02-02 *Sensibility in the Early Modern Era* investigates how the early modern characterisation of sensibility as a natural property of the body could give way to complex considerations about the importance of affect in morality What underlies this understanding of sensibility is the attempt to fuse Lockean sensationism with Scottish sentimentalism being able to have experiences of objects in the world is here seen as being grounded in the same principle that also enables us to feel moral sentiments Moral and epistemic ways of relating to the world thus blend into one another

as both can be traced to the same capacity that enables us to affectively respond to stimuli that impinge on our perceptual apparatus. This collection focuses on these connections by offering reflections on the role of sensibility in the early modern attempt to think of the human being as a special kind of sensitive machine and affectively responsive animal. Humans as they are understood in this context relate to themselves by sensing themselves and perpetually refining their intellectual and moral capacities in response to the way the world affects them. Responding to the world here refers to the manner in which both natural and man-made influences impact on our ability to conceptualise the animate and inanimate world and our place within that world. This book was originally published as a special issue of the *Intellectual History Review*. **A Handbook of Romanticism Studies** Joel Faflak, Julia M. Wright, 2016-01-19 The Handbook to Romanticism Studies is an accessible and indispensable resource providing students and scholars with a rich array of historical and up-to-date critical and theoretical contexts for the study of Romanticism. Focuses on British Romanticism while also addressing continental and transatlantic Romanticism and earlier periods. Utilizes keywords such as imagination, sublime, poetics, philosophy, race, historiography, and visual culture as points of access to the study of Romanticism and the theoretical concerns and the culture of the period. Explores topics central to Romanticism studies and the critical trends of the last thirty years. *Anti/Idealism* Juliana Albuquerque, Gert Hofmann, 2019-10-08 The late 18th century is characterized by two crucial events: the rise of Goethe as a dominating literary figure and the emergence of Kant's critical philosophy and its productive reception not only in the philosophical but also literary discourse of the time. While the Tübingen School creatively adopted Kant's philosophy as a system of ideas, they also critically responded to its intellectualising impulse by positing the equiprimordiality of world and Self of art and reason. Adhering to the self-critical impulse of Kant's philosophy by positing the equiprimordiality of both the empirical world and the intelligible subject and trying to overcome the chiasm between them through the classicist model of aesthetic Bildung, they argued for the co-extensiveness of the reality of both philosophy and literature. The authors investigate how the latent antagonism between these divergent traditions of the so-called Goethezeit creates the thrust behind the intellectual firework of divergent literary and philosophical discourses from around 1800 throughout the 19th and into the 20th century. *The Cambridge Companion to Schubert's 'Winterreise'* Marjorie W. Hirsch, Lisa Feurzeig, 2021-02-04 An accessible multi-disciplinary exploration of Franz Schubert's haunting late song cycle *Winterreise* 1827 that combines context and different analytical approaches. *Kant and the Transformation of Natural History* Andrew Cooper, 2023 Andrew Cooper presents the first systematic study of Kant's account of natural history. Cooper contends that Kant made a decisive contribution to one of the most explosive and understudied revolutions in the history of science: the addition of time to the frame in which explanations are required, sought, and justified in natural science. Through addressing a wide range of Kant's works, Cooper challenges the claim that Kant's theory of science denies a developmental conception of nature and argues instead that it establishes a method by which natural historians can genuinely dispute historical claims.

and potentially come to consensus This method Cooper argues can be used to expose serious flaws in Kant's own historical reasoning including the formation and defence of his racist views The book will be valuable to philosophers seeking to discern both the power and limitations of Kant's theory of science and to historians of science working on the fractured landscape of eighteenth century Newtonianism

Germany's Conscience Reinbert Krol, 2021-06-09 Questions of truth ethics state power and propaganda of how to render account of catastrophes and reconcile oneself with one's past are not only crucial to our time they were also central to the German historian Friedrich Meinecke 1862-1954 Probably no generation of historians before Meinecke had lived through more unsettling transformations during which these questions were most pressing Reinbert Krol's analysis of Meinecke's intellectual development does not only give us insight into his philosophy of history which turns out to be more conciliatory than previously assumed it can also be a source of inspiration for scholars of history today

Carl Jung and the Evolutionary Sciences Gary Clark, 2024-10-22 This book reevaluates Carl Jung's ideas in the context of contemporary research in the evolutionary sciences Recent work in developmental biology as well as experimental and psychedelic neuroscience have provided empirical evidence that supports some of Jung's central claims about the nature and evolution of consciousness Beginning with a historical contextualisation of the genesis of Jung's evolutionary thought and its roots in the work of the 19th century Naturphilosophen the book then outlines a model of analytical psychology grounded in modern theories of brain development and life history theory The book also explores research on evolved sex based differences and their relevance to Jung's concept of the anima and animus Seeking to build bridges between analytical psychology and contemporary evolutionary studies and associated fields this book will appeal to scholars of analytical and depth psychology as well as researchers in the evolutionary and brain sciences
