The Newtonian Revolution I. Bernard Cohen, 1980 This volume presents Professor Cohen's original interpretation of the revolution that marked the beginnings of modern science and set Newtonian science as the model for the highest level of achievement in other branches of science It shows that Newton developed a special kind of relation between abstract mathematical constructs and the physical systems that we observe in the world around us by means of experiment and critical observation The heart of the radical Newtonian style is the construction on the mind of a mathematical system that has some features in common with the physical world this system was then modified when the deductions and conclusions drawn from it are tested against the physical universe Using this system Newton was able to make his revolutionary innovations in celestial mechanics and ultimately create a new physics of central forces and the law of universal gravitation

Building on his analysis of Newton's methodology Professor Cohen explores the fine structure of revolutionary change and scientific creativity in general. This is done by developing the concept of scientific change as a series of transformations of existing ideas. It is shown that such transformation is characteristic of many aspects of the sciences and that the concept of scientific change by transformation suggests a new way of examining the very nature of scientific creativity. Hypotheses and Perspectives in the History and Philosophy of Science Raffaele Pisano, Joseph Agassi, Daria Drozdova, 2017-11-23

To commemorate the 50th anniversary of his passing in 2014 this special book features studies on Alexandre Koyr 1892-1964 one of the most influential historians of science of the 20th century who re-evaluated prevalent thinking on the history and philosophy of science. In particular it explores Koyr's intellectual matrix and heritage within interdisciplinary fields of historical, epistemological and philosophical scientific thought. Koyr is rightly noted as both a versatile historian on the birth and development of modern science and for his interest in philosophical questions on the nature of scientific knowledge. In the 1940s and 1950s his activities in the United States established a crucial bridge between the European historical tradition of science studies and the American academic environments and an entire generation of historians of science grew up under his direct influence. The book brings together contributions from leading experts in the field and offers much needed insights into the subject from historical nature of science and philosophical perspectives. It provides an absorbing and revealing read for historians, philosophers and scientists alike. **The Norton History of the Human Sciences** Roger Smith, 1997

Beginning with the Renaissance's rediscovery of Greek psychology, political philosophy and ethics, author Roger Smith recounts how the human sciences gradually organized themselves around a scientific conception of psychology and how this trend has continued to the present day in a circle of interactions between science and ordinary life, influencing and influenced by popular culture. Photos, drawings. *The Chemical Philosophy* Allen G. Debus, 2002-01-01

This rich record of the major interests of Paracelsus and other 16th century chemical philosophers covers chemistry and nature in the Renaissance. Paracelsian debates, theories of Fludd, Helmontian restatement of chemical philosophy and other fascinating aspects of the era. Well researched, compellingly related study. 36 black and white illustrations. Discovery and Invention Charles T. Stewart Jr., 2019-06-12

The history of humanity can be written in terms of discovery and invention. They are very different cognitive processes: search for order and problem solving. This book is a search for explanation of the Scientific and Industrial Revolutions. It surveys seven civilizations in terms of both their achievements and their failures. What were the characteristics they shared that promoted progress? What prevented or discouraged progress in discovery and or in invention? Sumer was creative, the mother of civilizations. Egypt was not. In Sumer, authority was divided and it was a trading economy. Egypt was authoritarian and closed. Rome and Islam inherited the Greek legacy. Rome was not interested; it had a different agenda. Islam progressed but civilization conflicted with religion and then regressed. China led in inventions but then stagnated and always lagged in discovery. Its ultimate failure has multiple explanations that include the scope of authority, structure of society and

economy and of language and script But so was its preference for intuition over logic or evidence as the method of seeking the truth It is Greek capacity for abstraction origin a mystery that was essential for its achievements discoveries of the structure of the universe and the cognitive approach to truth seeking Much invention was a byproduct of discovery It is Greek achievements in discovery and abstract reasoning that Europe adopted and advanced leading to the scientific and subsequent industrial revolutions Ours is a new phase in human history What were some of its consequences and what are its prospects

Science and the Arts Jacob Oppenheimer, 1973 Deals with the philosophical implications of natural science in the various humanistic disciplines during the 17th 18th and 19th centuries Remarkable in combining and relating numerous disparate disciplines in the arts and sciences

A History of Natural Philosophy Edward Grant, 2007-01-22 Natural philosophy encompassed all natural phenomena of the physical world It sought to discover the physical causes of all natural effects and was little concerned with mathematics By contrast the exact mathematical sciences were narrowly confined to various computations that did not involve physical causes functioning totally independently of natural philosophy Although this began slowly to change in the late Middle Ages a much more thoroughgoing union of natural philosophy and mathematics occurred in the seventeenth century and thereby made the Scientific Revolution possible The title of Isaac Newton's great work *The Mathematical Principles of Natural Philosophy* perfectly reflects the new relationship Natural philosophy became the Great Mother of the Sciences which by the nineteenth century had nourished the manifold chemical physical and biological sciences to maturity thus enabling them to leave the Great Mother and emerge as the multiplicity of independent sciences we know today

The Social Origins of Modern Science P. Zilsel, 2013-03-07 Edgar Zilsel 1891

1944 lived through the best of times and worst of times through the renewal of scientific optimism and humane politics and through the massive social collapse into idolatrous barbarism With it all and with his personal and family crises in Vienna and later in America Zilsel was I believe a truly heroic indeed a model scholar of the first half of the 20 century He was widely admired as a teacher at high schools in workers education in research tutoring and seminars He was an original investigator on matters of the methodology of science and of the history of the sciences He was a social and political analyst as a critical Marxist of the turmoil of Vienna in the 20s Above all he achieved so much as a sociological historian who undertook research on two central facts of the early modern world recognition of the creative individual and the ideal of genius and the conditions and realities of the coming of science to European civilization

François Blondel Anthony Gerbino, 2012-12-06 First director of the Académie royale d'architecture François Blondel established a lasting model for architectural education that helped transform a still largely medieval profession into the one we recognize today Most well known for his 1676 urban plan of Paris Blondel is also celebrated as a mathematician scientist and scholar Few figures are more representative of the close affinity between architecture and the new science of the seventeenth century The first full length study in English to appear on this polymath this book adds to the scholarship on early modern architectural history and particularly on French

Pasnau,2013-02-07 Robert Pasnau traces the developments of metaphysical thinking through four rich but for the most part neglected centuries of philosophy running from the thirteenth century through to the seventeenth At no period in the history of philosophy other than perhaps our own have metaphysical problems received the sort of sustained attention they received during the later Middle Ages and never has a whole philosophical tradition come crashing down as quickly and completely as did scholastic philosophy in the seventeenth century The thirty chapters work through various fundamental metaphysical issues sometimes focusing more on scholastic thought sometimes on the seventeenth century Pasnau begins with the first challenges to the classical scholasticism of Bonaventure and Thomas Aquinas runs through prominent figures like John Duns Scotus and William Ockham and ends in the seventeenth century with the end of the first stage of developments in post scholastic philosophy on the continent with Descartes and Gassendi and in England with Boyle and Locke *Encyclopedia of the Scientific Revolution* Wilbur Applebaum,2003-12-16 With unprecedented current coverage of the profound changes in the nature and practice of science in sixteenth and seventeenth century Europe this comprehensive reference work addresses the individuals ideas and institutions that defined culture in the age when the modern perception of nature of the universe and of our place in it is said to have emerged Covering the historiography of the period discussions of the Scientific

Revolution's impact on its contemporaneous disciplines and in depth analyses of the importance of historical context to major developments in the sciences The Encyclopedia of the Scientific Revolution is an indispensable resource for students and researchers in the history and philosophy of science Fortress of the Soul Neil Kamil, 2020-03-03 French Huguenots made enormous contributions to the life and culture of colonial New York during the seventeenth and eighteenth centuries Huguenot craftsmen were the city's most successful artisans turning out unrivaled works of furniture which were distinguished by unique designs and arcane details More than just decorative flourishes however the visual language employed by Huguenot artisans reflected a distinct belief system shaped during the religious wars of sixteenth century France In Fortress of the Soul historian Neil Kamil traces the Huguenots journey to New York from the Aunis Saintonge region of southwestern France There in the sixteenth century artisans had created a subterranean culture of clandestine workshops and meeting places inspired by the teachings of Bernard Palissy a potter alchemist and philosopher who rejected the communal militaristic ideology of the Huguenot majority which was centered in the walled city of La Rochelle Palissy and his followers instead embraced a more fluid portable and discrete religious identity that encouraged members to practice their beliefs in secret while living safely even prospering as artisans in hostile communities And when these artisans first fled France for England and Holland then left Europe for America they carried with them both their skills and their doctrine of artisanal security Drawing on significant archival research and fresh interpretations of Huguenot material culture Kamil offers an exhaustive and sophisticated study of the complex worldview of the Huguenot community From the function of sacred violence and alchemy in the visual language of Huguenot artisans to the impact among Protestants everywhere of the destruction of La Rochelle in 1628 to the ways in which New York's Huguenots interacted with each other and with other communities of religious dissenters and refugees Fortress of the Soul brilliantly places American colonial history and material life firmly within the larger context of the early modern Atlantic world *A History of Medicine: Medieval medicine* Plinio Prioreschi, 1996
