World Agriculture: Towards 2015/2030 Jelle Bruinsma, 2017-09-25 This report is FAO's latest assessment of the long term outlook for the world's food supplies nutrition and agriculture It presents the projections and the main messages The projections cover supply and demand for the major agricultural commodities and sectors including fisheries and forestry This analysis forms the basis for a more detailed examination of other factors such as nutrition and undernourishment and the implications for international

trade The report also investigates the implications of future supply and demand for the natural resource base and discusses how technology can contribute to more sustainable development One of the report s main findings is that if no corrective action is taken the target set by the World Food Summit in 1996 that of halving the number of undernourished people by 2015 is not going to be met Nothing short of a massive effort at improving the overall development performance will free the developing world of its most pressing food insecurity problems The progress made towards this target depends on many factors not least of which are political will and the mobilization of additional resources Past experience underlines the crucial role of agriculture in the development process particularly where the majority of the population still depends on this sector for employment and income

Benefits and Potential Risks of the Lactoperoxidase System of Raw Milk

Preservation Food and Agriculture Organization of the United Nations,World Health Organization,2006-01-01 This technical meeting was jointly organised by the Animal Production and the Food Quality and Standards Services of the FAO of the United Nations in cooperation with the Department of Food Safety Zoonoses and Foodborne Disease WHO to obtain the best available scientific advice on issues related to the use of the lactoperoxidase system LP s in raw milk preservation After reviewing the available scientific information References Appendix A and B the technical meeting concluded that the LP s is a safe method of preventing milk losses due to microbial spoilage when used according to the Codex guidelines either alone or in combination with other approved procedures The LP s is particularly suitable for application in situations where technical economical and or practical reasons do not allow the use of cooling facilities for maintaining the quality of raw milk Use of the LP s does not preclude or replace the need for the pasteurization of raw milk to improve safety for human consumption
