Biodiversity and Environmental Change Emma Burns, David Lindenmayer, Andrew Lowe, Nicole Thurgate, 2014-02-06 Annotation Long term ecological data are critical for informing long term trends in biodiversity and trends in environmental change The Terrestrial Ecosystem Research Network TERN is a major initiative of the Australian Government and one of its key areas of investment is to provide funding for a network of long term ecological research plots around Australia LTERN This book highlights some of the temporal changes in the environment and or in biodiversity that have occurred in different ecosystems ranging from tropical rainforests wet eucalypt forests and alpine regions through to rangelands and deserts Many important trends and changes are documented and they often provide new insights that were previously poorly understood or unknown These data are precisely the kinds of data so desperately needed to better quantify the temporal trajectories in the environment and biodiversity in Australia

Echolocation in Bats and Dolphins Jeanette A. Thomas, Cynthia F. Moss, Marianne Vater, 2004 Although bats and dolphins live in very different environments are vastly different in size and hunt different kinds of prey both groups have evolved similar sonar systems known as echolocation to locate food and navigate the skies and seas While much research has

been conducted over the past thirty years on echolocation in bats and dolphins this volume is the first to compare what is known about echolocation in each group to point out what information is missing and to identify future areas of research Echolocation in Bats and Dolphins consists of six sections mechanisms of echolocation signal production the anatomy and physiology of signal reception and interpretation performance and cognition ecological and evolutionary aspects of echolocation mammals theoretical and methodological topics and possible echolocation capabilities in other mammals including shrews seals and baleen whales Animal behaviorists ecologists physiologists and both scientists and engineers who work in the field of bioacoustics will benefit from this book

The Theory of Island Biogeography Revisited Jonathan B. Losos Losos, Robert E. Ricklefs, 2009-10-19 Robert H MacArthur and Edward O Wilson's *The Theory of Island Biogeography* first published by Princeton in 1967 is one of the most influential books on ecology and evolution to appear in the past half century By developing a general mathematical theory to explain a crucial ecological problem the regulation of species diversity in island populations the book transformed the science of biogeography and ecology as a whole In *The Theory of Island Biogeography Revisited* some of today's most prominent biologists assess the continuing impact of MacArthur and Wilson's book four decades after its publication Following an opening chapter in which Wilson reflects on island biogeography in the 1960s fifteen chapters evaluate and demonstrate how the field has extended and confirmed as well as challenged and modified MacArthur and Wilson's original ideas Providing a broad picture of the fundamental ways in which the science of island biogeography has been shaped by MacArthur and Wilson's landmark work *The Theory of Island Biogeography Revisited* also points the way toward exciting future research

Ecological Responses to the 1980 Eruption of Mount St. Helens Virginia H. Dale, Frederick J. Swanson, Charles M. Crisafulli, 2006-01-16 Reconquering Disturbance Succession and Forest Management The Science of Mount St Helens When Mount St Helens erupted on May 18 1980 it did more than just reconquer a large piece of Cascadian landscape It also led to dramatic revisions in our perspectives on disturbances secondary succession and forestry practices The Mount St Helens landscape turned out to be a far more complex place than the moonscape that it initially appeared to be Granted a large area was literally scoured and sterilized and that vast expanse of newly formed rock mud ows and avalanche debris up and down the mountain made the Mount St Helens landscape unique But I still remember my surprise when as I stepped out of the helicopter on first landing within the extensive devastated zone I saw hundreds of plants pushing their way up through the mantle of tephra Surviving organisms were stunning in their diversity abundance and the mechanisms by which they survived They persisted as whole organisms living below ground encased within late persisting snowbanks and buried in lake and stream sediments They survived as rhizomes transported along with the massive landslide that accompanied the eruption and as stems that suffered the abrasion of mud ows Mud ows oated nurse logs covered with tree seedlings and then redeposited them on the floor of a forested river terrace Millions perhaps billions of plants survived as rootstocks and rhizomes that pushed their way up

through the tephra and others survived on the bases of uprooted trees

The Unified Neutral Theory of Biodiversity and Biogeography Stephen P. Hubbell, 2011-06-27 Despite its supreme importance and the threat of its global crash biodiversity remains poorly understood both empirically and theoretically This ambitious book presents a new general neutral theory to explain the origin maintenance and loss of biodiversity in a biogeographic context Until now biogeography the study of the geographic distribution of species and biodiversity the study of species richness and relative species abundance have had largely disjunct intellectual histories In this book Stephen Hubbell develops a formal mathematical theory that unifies these two fields When a speciation process is incorporated into Robert H MacArthur and Edward O Wilson's now classical theory of island biogeography the generalized theory predicts the existence of a universal dimensionless biodiversity number In the theory this fundamental biodiversity number together with the migration or dispersal rate completely determines the steady state distribution of species richness and relative species abundance on local to large geographic spatial scales and short term to evolutionary time scales Although neutral Hubbell's theory is nevertheless able to generate many nonobvious testable and remarkably accurate quantitative predictions about biodiversity and biogeography In many ways Hubbell's theory is the ecological analog to the neutral theory of genetic drift in genetics The unified neutral theory of biogeography and biodiversity should stimulate research in new theoretical and empirical directions by ecologists evolutionary biologists and biogeographers

Darwin's Finches Kathleen Donohue, 2011-06-15 Two species come to mind when one thinks of the Galapagos Islands the giant tortoises and Darwin's fabled finches While not as immediately captivating as the tortoises these little brown songbirds and their beaks have become one of the most familiar and charismatic research systems in biology providing generations of natural historians and scientists a lens through which to view the evolutionary process and its role in morphological differentiation In *Darwin's Finches* Kathleen Donohue excerpts and collects the most illuminating and scientifically significant writings on the finches of the Galapagos to teach the fundamental principles of evolutionary theory and to provide a historical record of scientific debate Beginning with fragments of Darwin's Galapagos field notes and subsequent correspondence and moving through the writings of such famed field biologists as David Lack and Peter and Rosemary Grant the collection demonstrates how scientific processes have changed over time how different branches of biology relate to one another and how they all relate to evolution As Donohue notes practicing science today is like entering a conversation that has been in progress for a long long time Her book provides the history of that conversation and an invitation to join in Students of both evolutionary biology and history of science will appreciate this compilation of historical and contemporary readings and will especially value Donohue's enlightening commentary
