Geographical Education in a Changing World John Lidstone, Michael Williams, 2006-07-19 This book results from the work of the Commission on Geographical Education of the International Geographical Union Part 1 focuses on the distinctive traditions of school geography Part 2 reviews the state of school geography on a broad continental basis including national case studies by local experts The final chapters extrapolate from the present and point to likely future developments in the subject again with examples drawn from various countries

Learning to Teach Geography in the Secondary School David Balderstone, 2004-08-02 Learning to Teach Geography in the Secondary School provides intending and practising teachers of geography with the practical skills to design teach and evaluate varied and exciting lessons It also helps them to acquire a deeper understanding of geography's role purpose and potential in secondary education The book explores how teachers may use geography as a vehicle for preparing pupils for uncertain environmental cultural social and economic futures

International Handbook on Geographical Education Rod Gerber, 2013-03-09 I am very pleased to have been asked by Rod Gerber to provide a preface to such a book Not least because of the twenty four chapters eight are written by former students or colleagues with whom I have worked in the past and whom I still meet at conferences on geographical education It is with a certain pride and joy that I note the progress which has been made in geographical education both in its day to day teaching and in research in the twenty years following the end of my term of office as Chair of the Commission on Geographical Education of the International Geographical Union CGEIUG My successors Joe Stoltman Hartwig Haubrich Rod Gerber and now Lea Houtsonen have done much and are continuing to work hard to foster the development of geographical education This book is proof if proof were needed that the international collaboration in this field is alive and well with contributions coming from all the continents except Antarctica It would be a moribund subject that remained unaffected in one way or another by developments on the great world stage as Fairgrieve 1926 would have put it And as Rod Gerber shows the issues of globalisation of cultural encounters of differing value systems of new technologies of variable economic development and of environmental quality all feature as topics which influence and are influenced by geographical education

Curriculum Ivor F Goodson, 2002-11-01 The first edition of *The Making of Curriculum* was published in 1988 and reviewers hailed it as a seminal work in the field. In that work Goodson explored a number of aspects of the so called traditional subjects and described the way they develop over time to a point where they can be promoted as academic disciplines. He showed that the claim to be academic was in fact the result of a substantial political contest covering a century or more. The traditional subject was in short invented. The first edition of this book provided a series of challenging insights for those desiring to make sense of the current debate over schooling. In this new and extended second edition Bill Pinar adds an illuminating introduction and Goodson brings his argument up to date with a discussion of the National Curriculum a contemporary initiative in the making of curriculum.

A Guide to Educational Research Peter Gordon, 2014-01-14 This account of development in educational research is intended as a guide to possible research areas both fundamental and policy related for students in colleges and higher education institutions and should also be of interest to those engaged in curriculum planning and administration.

Space, Place and Scale in the Study of Education Lorraine Symaco, Colin Brock, 2017-10-02 The term space is inherently geographical. Educational provision and activity takes place within spaces ranging from a room at home or in a school to a campus to an administrative area which could be a state within a country, a whole country or a group of countries. Such spaces are known as geographical surfaces. Within these spaces the process of learning and teaching takes place at particular points that are often nodes in a network which may be formal such as a group of schools or universities or non formal such as in cyberspace. Understanding what goes on depends on the scale at which it is observed ranging from individuals to global outreach. Altogether this constitutes the geography of educational reality. This comprehensive volume includes a theoretical background plus a sample of situations including school level policy and administration, inequitable access, education hubs and small states. It offers an introduction to a relatively neglected member of the family of education foundation disciplines, the geography of education. This book was originally published as a special issue of *Comparative Education*.
