gained a fundamental insight about the origins of such ecosystem complexity He realized that when subgroups of the same species inhabit even slightly different ecosystems these subgroups will evolve in diverging directions This divergent evolution is primarily driven by interactions with the many other species in each ecosystem which are themselves evolving in different directions in the different ecosystems We explore how this subtle and fascinating concept lies at the heart of the evolutionary ferment that powers ecosystem diversity and resilience the bubbling evolutionary cauldrons of the book's title This ferment pervades ecosystems but it is especially active in their microorganism communities We then examine the evolutionary forces that power these cauldrons starting with between species interactions and tunnelling down to their causes Using real world examples we explore how the technologies available for measuring these changes are increasing exponentially in precision and scope We show how this deluge of new genetic and environmental information can be used to protect and restore a wide variety of damaged ecosystems Ecosystems have survived dramatic changes in the past often becoming even more wondrous and diverse than before We are now learning how this happens and how we can preserve this astounding ability

and costly mistakes On October 4 1951 a young black woman named Henrietta Lacks died of cervical cancer That is most of Henrietta Lacks died In a laboratory dish at the Johns Hopkins Medical Center in Baltimore a few cells taken from her fatal tumor continued to live to thrive in fact For reasons unknown her cells code named HeLa grew more vigorously than any other cells in culture at the time Long time science reporter Michael Gold describes in graphic detail how the errant HeLa cells spread contaminating and overwhelming other cell cultures sabotaging research projects and eluding detection until they had managed to infiltrate scientific laboratories worldwide He tracks the efforts of geneticist Walter Nelson Rees to alert a sceptical scientific community to the rampant HeLa contamination And he reconstructs Nelson Rees s crusade to expose the embarrassing mistakes and bogus conclusions of researchers who unknowingly abetted HeLa s spread

Illinois Pure Water Committee, Inc. V. Director of the Department of Public Health of the State of Illinois, 1983 Heredity John Waller, 2017 John Waller describes the changing ideas concerning heredity from antiquity to the modern biological understanding considering both the efforts over the centuries to identify the physiological mechanisms involved and how views of heredity have been used to justify or condemn inequalities of class gender and race **Index Medicus**, 2003 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings **The Vaccine Race** Meredith Wadman, 2018-09-04 A real jewel of science history brims with suspense and now forgotten catastrophe and intrigue Wadman s smooth prose calmly spins a surpassingly complicated story into a real tour de force The New York Times Riveting The Vaccine Race invites comparison with Rebecca Skloot s 2007 The Immortal Life of Henrietta Lacks Nature The epic and controversial story of a major breakthrough in cell biology that led to the conquest of rubella and other devastating diseases Until the late 1960s tens of thousands of American children suffered crippling birth defects if their mothers had been exposed to rubella popularly known as German measles while pregnant there was no vaccine and little understanding of how the disease devastated fetuses In June 1962 a young biologist in Philadelphia using tissue extracted from an aborted fetus from Sweden produced safe clean cells that allowed the creation of vaccines against rubella and other common childhood diseases Two years later in the midst of a devastating German measles epidemic his colleague developed the vaccine that would one day wipe out homegrown rubella The rubella vaccine and others made with those fetal cells have protected more than 150 million people in the United States the vast majority of them preschoolers The new cells and the method of making them also led to vaccines that have protected billions of people around the world from polio rabies chicken pox measles hepatitis A shingles and adenovirus Meredith Wadman s masterful account recovers not only the science of this urgent race but also the political roadblocks that nearly stopped the scientists She describes the terrible dilemmas of pregnant women exposed to German measles and recounts testing on infants prisoners orphans and the intellectually disabled which was common in the era These events take place at the dawn of the battle over using human fetal tissue in research during the arrival of big commerce in campus labs and as huge changes take place in the laws and practices governing who owns

research cells and the profits made from biological inventions It is also the story of yet one more unrecognized woman whose cells have been used to save countless lives With another frightening virus measles on the rise today no medical story could have more human drama impact or urgency than The Vaccine Race
