Mastorakis, Imre J. Rudas, Yuriy S. Shmaliy, 2025-02-28 This book provides readers with modern computational techniques for solving variety of problems from electrical mechanical civil and chemical engineering Mathematical methods are presented in a unified manner so they can be applied consistently to problems in applied electromagnetics strength of materials fluid mechanics heat and mass transfer environmental engineering biomedical engineering signal processing automatic control and more The Differential Geometry of Finsler Spaces Hanno Rund, 2012-12-06 The present monograph is motivated by two distinct aims Firstly an endeavour has been made to furnish a reasonably comprehensive account of the theory of Finsler spaces based on the methods of classical differential geometry Secondly it is hoped that this monograph may serve also as an introduction to a branch of differential geometry which is closely related to various topics in theoretical physics notably analytical dynamics and geometrical optics With this second object in mind an attempt has been made to describe the basic aspects of the theory in some detail even at the expense of conciseness while in the more specialised sections of the later chapters which might be of interest chiefly to the specialist a more succinct style has been adopted The fact that there exist several fundamentally different points of view with regard to Finsler geometry has rendered the task of

writing a coherent account a rather difficult one This remark is relevant not only to the development of the subject on the basis of the tensor calculus but is applicable in an even wider sense The extensive work of H BUSEMANN has opened up new avenues of approach to Finsler geometry which are independent of the methods of classical tensor analysis In the latter sense therefore a full description of this approach does not fall within the scope of this treatise although its fundamental significance cannot be doubted

Die innere Geometrie der metrischen Räume Willi Rinow, 2013-07-29 Die innere Geometrie einer Flache ist die Lehre von denjenigen Eigenschaften die bei isometrischen Abbildungen unverändert bleiben also nur von ihrer ersten Fundamentalform abhängen Sie wurde von C F GAUSS durch die Entdeckung begründet daß das Produkt der Hauptkrümmungsradien einer Flache eine isometrische Invariante ist B RIEMANN dehnte diese Theorie in seiner Habilitationsschrift auf mehr dimensionale und damit gleichzeitig auf abstrakte Mannigfaltigkeiten aus Während man zunächst nur das Studium solcher Mannigfaltigkeiten in Betracht zog deren Bogenelement durch die Quadratwurzel aus einer quadratischen Differentialform gegeben ist entwickelte P FINSLER in seiner Dissertation die innere Geometrie auf der Grundlage eines allgemeinen Bogenelementes eine Möglichkeit die bereits B RIEMANN erkannt hatte Seit den klassischen Untersuchungen von J HADAMARD über Flächen konstanter negativer Krümmung und von D HILBERT über die Existenz von Extremalen bei Variationsproblemen setzte sich die Erkenntnis immer mehr durch daß ein großer Teil der Methoden insbesondere diejenigen welche in der Differentialgeometrie im Großen entwickelt worden sind nur die topologische und metrische Struktur der Mannigfaltigkeiten nicht aber ihre Differenzierbarkeitsstruktur betreffen Der von FRECHET geschaffene Begriff des metrischen Raumes ermöglichte es die innere Geometrie auf einer von Differenzierbarkeitsvoraussetzungen freien Grundlage zu stellen Zunächst stand jedoch die Topologie der metrischen Räume im Vordergrund des Interesses Erst mit K MENGER setzte ein systematisches Studium der isometrischen Invarianten ein Inzwischen ist eine umfangreiche Literatur entstanden Die Hauptergebnisse sind in den drei Bänden von A D ALEXANDROW G J L M

BLUMENTHAL I J und H **80 Years of Zentralblatt MATH** Olaf Teschke, Bernd Wegner, Dirk Werner, 2011-08-27 Founded in 1931 by Otto Neugebauer as the printed documentation service Zentralblatt für Mathematik und ihre Grenzgebiete Zentralblatt MATH ZBMATH celebrates its 80th anniversary in 2011 Today it is the most comprehensive and active reference database in pure and applied mathematics worldwide Many prominent mathematicians have been involved in this service as reviewers or editors and have like all mathematicians left their footprints in ZBMATH in a long list of entries describing all of their research publications in mathematics This book provides one review from each of the 80 years of ZBMATH Names like Courant Kolmogorov Hardy Hirzebruch Faltings and many others can be found here In addition to the original reviews the book offers the authors profiles indicating their co-authors their favorite journals and the time span of their publication activities In addition to this a generously illustrated essay by Silke Gabel describes the history of ZBMATH **Categorical Structures And Their Applications - Proceedings Of The North-west European Category Seminar** Habil Werner

Gahler, Gerhard Preuss, 2004-09-28 The book collects original research papers on applied categorical structures most of which have been presented at the North West European Category Seminar 2003 in Berlin The spectrum of these mathematical results reflects the varied interests of Horst Herrlich one of the leading category theorists of the world to whom this volume is dedicated in view of his 65th birthday The book contains applications of categorical methods in various branches of mathematics such as algebra analysis logic and topology as well as fuzzy structures and computer science At the end of the book the reader will find a complete list of Horst Herrlich's publications The proceedings have been selected for coverage in Index to Scientific Technical Proceedings ISTP ISI Proceedings Index to Scientific Technical Proceedings ISTP CDROM version ISI Proceedings CC Proceedings Engineering Physical Sciences **Abstract Spaces and Approximation / Abstrakte Räume und Approximation** Butzer, 2013-11-21 The present conference took place at Oberwolfach July 18-27 1968 as a direct follow up on a meeting on Approximation Theory 1 held there from August 4-10 1963 The emphasis was on theoretical aspects of approximation rather than the numerical side Particular importance was placed on the related fields of functional analysis and operator theory Thirty nine papers were presented at the conference and one more was subsequently submitted in writing All of these are included in these proceedings In addition there is a report on new and unsolved problems based upon a special problem session and later communications from the participants A special role is played by the survey papers also presented in full They cover a broad range of topics including invariant subspaces scattering theory Wiener Hopf equations interpolation theorems contraction operators approximation in Banach spaces etc The papers have been classified according to subject matter into five chapters but it needs little emphasis that such thematic groupings are necessarily arbitrary to some extent The Proceedings are dedicated to the memory of Jean Favard It was Favard who gave the Oberwolfach Conference of 1963 a special impetus and whose absence was deeply regretted this time An appreciation of his life and contributions was presented verbally by Georges Alexits while the written version bears the signatures of both Alexits and Marc Zamansky Our particular thanks are due to E Linear Spaces and Approximation / Lineare Räume und Approximation Butzer, Szökefalvi-Nagy, 2013-03-08 The publication of Oberwolfach conference books was initiated by Birkhäuser Publishers in 1964 with the proceedings of the conference On Approximation Theory conducted by P L Butzer Aachen and J Korevaar Amsterdam Since that auspicious beginning others of the Oberwolfach proceedings have appeared in Birkhäuser's ISNM series The present volume is the fifth edited at Aachen in collaboration with an external institution It once again addresses itself to the most recent results on approximation and operator theory and includes 47 of the 48 lectures presented at Oberwolfach as well as five articles subsequently submitted by V A Baskakov Moscow H Esser Aachen G Lumer Mons E L Stark Aachen and P M Tamrazov Kiev In addition there is a section devoted to new and unsolved problems based upon two special problem sessions augmented by later communications from the participants Corresponding to the nature of the conference the aim of the organizers was to solicit both specialized and survey papers ranging in the broad area of

classical and functional analysis from approximation and interpolation theory to Fourier and harmonic analysis and to the theory of function spaces and operators. The papers were supplemented by lectures on fields represented for the first time in our series of Oberwolfach Conferences, so for example complex function theory or probability and sampling theory.
