Nonlinear Dynamics And Statistics:

Nonlinear Dynamics and Statistics Alistair I. Mees, 2001-01-25 This book describes the state of the art in nonlinear dynamical reconstruction theory The chapters are based upon a workshop held at the Isaac Newton Institute Cambridge University UK in late 1998 The book's chapters present theory and methods topics by leading researchers in applied and theoretical nonlinear dynamics statistics probability and systems theory Features and topics disentangling uncertainty and error the predictability of nonlinear systems achieving good nonlinear models delay reconstructions dynamics vs statistics introduction to Monte Carlo Methods for Bayesian Data Analysis latest results in extracting dynamical behavior via Markov Models data compression dynamics and stationarity Professionals researchers and advanced graduates in nonlinear dynamics probability optimization and systems theory will find the book a useful resource and guide to current developments in the subject

Nonlinear Dynamics and Statistics A. I. Mees, 2001-01-01 Recently a great deal of progress has been made in the modeling and understanding of processes with nonlinear dynamics even when only time series data are available This is a state of the art survey of the theory and methods used for nonlinear time series analysis The chapters are written by leading researchers in nonlinear dynamics statistics probability optimization and systems theory and cover both theory and applications Professionals researchers and students working in these fields will find this to be an indispensable resource

Copyright Libri GmbH All rights reserved Nonlinear Dynamics and Statistics Alistair I. Mees, 2012-12-06 All models are lies The Earth orbits the sun in an ellipse with the sun at one focus is false but accurate enough for almost all purposes This book describes the current state of the art of telling useful lies about time varying systems in the real world Specifically it is about trying to understand that is tell useful lies about dynamical systems directly from observations either because they are too complex to model in the conventional way or because they are simply ill understood Because it overlaps with conventional time series analysis building models of nonlinear dynamical systems directly from data has been seen by some observers as a somewhat ill informed attempt to reinvent time series analysis The truth is distinctly less trivial It is surely impossible except in a few special cases to recreate Newton's astonishing feat of writing a short equation that is an excellent description of real world phenomena Real systems are connected to the rest of the world they are noisy non stationary and have high dimensional dynamics even when the dynamics contains lower dimensional attractors there is almost never a coordinate system available in which these attractors have a conventionally simple description

Understanding Nonlinear Dynamics Daniel Kaplan, Leon Glass, 2012-12-06 Mathematics is playing an ever more important role in the physical and biological sciences provoking a blurring of boundaries between scientific disciplines and a resurgence of interest in the modern as well as the classical techniques of applied mathematics This renewal of interest both in research and teaching has led to the establishment of the series Texts in Applied Mathematics TAM The development of new courses is a natural consequence of a high level of excitement on the research frontier as newer techniques such as numerical and symbolic

computer systems dynamical systems and chaos mix with and reinforce the traditional methods of applied mathematics Thus the purpose of this textbook series is to meet the current and future needs of these advances and encourage the teaching of new courses TAM will publish textbooks suitable for use in advanced undergraduate and beginning graduate courses and will complement the Applied Mathematical Sciences AMS series which will focus on advanced textbooks and research level monographs About the Authors Daniel Kaplan specializes in the analysis of data using techniques motivated by nonlinear dynamics His primary interest is in the interpretation of irregular physiological rhythms but the methods he has developed have been used in geo physics economics marine ecology and other fields He joined McGill in 1991 after receiving his Ph D from Harvard University and working at MIT His undergraduate studies were completed at Swarthmore College He has worked with several instrumentation companies to develop novel types of medical monitors

Nonlinear Dynamics and Statistical Theories for Basic Geophysical Flows Andrew Majda, Xiaoming Wang, 2006-05-11 The general area of geophysical fluid mechanics is truly interdisciplinary Now ideas from statistical physics are being applied in novel ways to inhomogeneous complex systems such as atmospheres and oceans In this book the basic ideas of geophysics probability theory information theory nonlinear dynamics and equilibrium statistical mechanics are introduced and applied to large time selective decay the effect of large scale forcing nonlinear stability fluid flow on a sphere and Jupiter's Great Red Spot The book is the first to adopt this approach and it contains many recent ideas and results Its audience ranges from graduate students and researchers in both applied mathematics and the geophysical sciences It illustrates the richness of the interplay of mathematical analysis qualitative models and numerical simulations which combine in the emerging area of computational science

Nonlinear Dynamics and Time Series, 2006 Lars Ahlfors's Lectures on Quasiconformal Mappings based on a course he gave at Harvard University in the spring term of 1964 was first published in 1966 and was soon recognized as the classic it was shortly destined to become These lectures develop the theory of quasiconformal mappings from scratch give a self contained treatment of the Beltrami equation and cover the basic properties of Teichmüller spaces including the Bers embedding and the Teichmüller curve It is remarkable how Ahlfors goes straight to the heart of the matter presenting major results with a minimum set of prerequisites Many graduate students and other mathematicians have learned the foundations of the theories of quasiconformal mappings and Teichmüller spaces from these lecture notes This edition includes three new chapters The first written by Earle and Kra describes further developments in the theory of Teichmüller spaces and provides many references to the vast literature on Teichmüller spaces and quasiconformal mappings The second by Shishikura describes how quasiconformal mappings have revitalized the subject of complex dynamics The third by Hubbard illustrates the role of these mappings in Thurston's theory of hyperbolic structures on 3 manifolds Together these three new chapters exhibit the continuing vitality and importance of the theory of quasiconformal mappings This book is a collection of research and expository papers reflecting the interfacing of two fields nonlinear dynamics in the physiological and biological sciences

and statistics It presents the proceedings of a four day workshop entitled Nonlinear Dynamics and Time Series Building a Bridge Between the Natural and Statistical Sciences held at the Centre de Recherches Mathematiques CRM in Montreal in July 1995 The goal of the workshop was to provide an exchange forum and to create a link between two diverse groups with a common interest in the analysis of nonlinear time series data The editors and peer reviewers of this work have attempted to minimize the problems of maintaining communication between the different scientific fields The result is a collection of interrelated papers that highlight current areas of research in statistics that might have particular applicability to nonlinear dynamics and new methodology and open data analysis problems in nonlinear dynamics that might find their way into the toolkits and research interests of statisticians Features A survey of state of the art developments in nonlinear dynamics time series analysis with open statistical problems and areas for further research Contributions by statisticians to understanding and improving modern techniques commonly associated with nonlinear time series analysis such as surrogate data methods and estimation of local Lyapunov exponents Starting point for both scientists and statisticians who want to explore the field Expositions that are readable to scientists outside the featured fields of specialization Information for our distributors Titles in this series are copublished with the Fields Institute for Research in Mathematical Sciences Toronto Ontario Canada

Nonlinear Dynamics and Time Series Colleen Diane Cutler, Daniel Kaplan, 1997 A collection of research and expository papers reflecting the interfacing of two fields nonlinear dynamics in the physiological and biological sciences and statistics It presents the proceedings of a four day workshop entitled Nonlinear Dynamics and Time Series Building a Bridge Between the Natural and Statistical Sciences held at the Centre de Recherches Mathematiques CRM in Montreal in July 1995 The goal of the workshop was to provide an exchange forum and to create a link between two diverse groups with a common interest in the analysis of nonlinear time series data The editors and peer reviewers of this work have attempted to minimize the problems of maintaining communication between the different scientific fields The result is a collection of interrelated papers that highlight current areas of research in statistics that might have particular applicability to nonlinear dynamics and new methodology and open data analysis problems in nonlinear dynamics that might find their way into the toolkits and research interests of statisticians
