The BRC Global Standard for Food Safety Ron Kill, 2011-08-24 This book offers companies in the food industry the first comprehensive guide to preparing for the Global Standard Audit Beverage and Food World May 2009 BASED ON ISSUE 5 OF THE BRC STANDARD The British Retail Consortium Global Standard for Food Safety was originally conceived to meet an increasing demand for a unified standard to be used by the major retailers in the UK for their suppliers of own label food products The system has proved so successful that it is now used throughout the food industry and over 7000 food manufacturers worldwide already have the Standard Companies are often unsure about how to approach attaining certification often a demanding process especially at the first attempt Not only are there over 300 clauses to satisfy there are also general concerns such as how to correct non conformities within very specific deadlines Even when their operations are actually

quite satisfactory many suppliers find themselves poorly prepared for the audit and do not perform as well as they might This book offers companies in the food industry the first comprehensive guide to preparing for the Global Standard audit Using over 600 real life examples it enables manufacturers to ensure that the correct systems are in place to achieve the Standard and present themselves in the best way during the audit process It also recommends the steps to take following the audit and how to correct non conformities The book is an essential resource for suppliers wishing to attain certification for the first time and those already in the scheme seeking to improve their grades It is also of interest to certification bodies and consultants to the food industry

Food Flavour Technology Andrew J. Taylor, Robert S. T. Linforth, 2009-12-15 Food flavour technology is of key importance for the food industry Increasingly food products must comply with legal requirements and conform to consumer demands for natural products but the simple fact is that if foods do not taste good they will not be consumed and any nutritional benefit will be lost There is therefore keen interest throughout the world in the production utilisation and analysis of flavours The second edition of this successful book offers a broad introduction to the formulation origins analysis and performance of food flavours updating the original chapters and adding valuable new material that introduces some of the newer methodologies and recent advances The creation of flavourings is the starting point for the book outlining the methodology and constraints faced by flavourists Further constraints are considered in a chapter dealing with international legislation The origins of flavours are described in three chapters covering thermal generation biogenesis and natural sources keeping in mind the adjustments that manufacturers have had to make to their raw materials and processes to meet the demand for natural products whilst complying with cost issues Delivery of flavours using encapsulation or through an understanding of the properties of the food matrix is described in the next two chapters and this

section is followed by chapters describing the different ways to analyse flavours using instrumental modelling and sensory techniques. The book is aimed at food scientists and technologists, ingredients suppliers, quality assurance personnel, analytical chemists and biotechnologists.

Bioactive Compounds in Foods John Gilbert, Hamide Şenyuva, 2009-01-21. Inherent toxicants and processing contaminants are both non-essential bioactive substances whose levels in foods can be difficult to control. This volume covers both types of compound for the first time, examining their beneficial as well as their undesirable effects in the human diet. Chapters have been written as individually comprehensive reviews and topics have been selected to illustrate recent scientific advances in understanding of the occurrence and mechanism of formation, exposure, risk assessment and developments in the underpinning analytical methodology. A wide range of contaminants are examined in detail, including pyrrolizidine alkaloids, glucosinolates, phycotoxins and mycotoxins. Several process contaminants, e.g. acrylamide and furan, which are relatively new but which have a rapidly growing literature, are also covered. The book provides a practical reference for a wide range of experts: specialist toxicologists, chemists and food chemists, hygienists, government officials and anyone who needs to be aware of the main issues concerning toxicants and process contaminants in food. It will also be a valuable introduction to the subject for postgraduate students.

Sensory Evaluation of Food Hildegard Heymann, Harry T. Lawless, 2013-11-08. The field of sensory evaluation has matured in the last

half century to become a recognized discipline in the food and consumer sciences and an important part of the foods and consumer products industries. Sensory professionals enjoy widespread recognition for the important services they provide in new product development, basic research, ingredient and process modification, cost reduction, quality maintenance, and product optimization. These services enhance the informational support for management decisions, lowering the risk that accompanies the decision-making process. From the consumers' perspective, a sensory testing program in a food or consumer products company helps ensure that products reach the market with not only good concepts but also with desirable sensory attributes that meet their expectations. Sensory professionals have advanced well beyond the stage when they were simply called on to execute taste tests and to provide statistical summaries of results. They are now frequently asked to participate in the decision process itself to draw reasoned conclusions based on data and to make recommendations. They are also expected to be well versed in an increasingly sophisticated battery of test methods and statistical procedures, including multivariate analyses. As always, sensory professionals also need to understand people, for people are the measuring instruments that provide the basic sensory data. People are notoriously variable and difficult to calibrate, presenting the sensory specialist with many additional measurement problems that are not present in instrumental methods.
