New Research on Immunology Barbara A. Veskler, 2005 Immunology is the study of the body s protection from foreign macromolecules or invading organisms and the responses to them These invaders include viruses bacteria protozoa or even larger parasites In addition immune responses are developed against our own proteins and other molecules in autoimmunity and against our own aberrant cells in tumour immunity The first line of defense against foreign organisms are barrier tissues such as the skin that stop the entry of organism into our bodies A second line of defense is the specific or adaptive immune system which may take days to respond to a primary invasion that is infection by an organism that has not hitherto been seen This new book brings together new research spanning the globe dealing with this extremely important subject

Translational Medicine Robert A. Meyers, 2018-03-02 This reference work gives a compete overview of the different stages of drug development using a translational approach The book is structured in different parts following the different stages in drug development Almost half of the work is dedicated to core of drug discovery using a translational approach the identification of appropriate targets and screening methods for the identification of compounds interacting with these targets The rest of book covers the

whole downstream pipeline after the identification of lead compounds such as bioavailability issues identification of appropriate drug delivery venues production and scaling issues and preclinical trials As has been the case with other works in the encyclopedia the book is made up of long comprehensive and authoritative chapters written by outstanding researchers in the field Genome Research ,2009 **Molecular Medicine for Clinicians** Barry Mendelow, Michèle Ramsay, Nanthakumarn Chetty, Wendy Stevens, 2008-01-01 The insights following the wake of the Human Genome project are radically influencing our understanding of the molecular basis of life health and disease The improved accuracy and precision of clinical diagnostics is also beginning to have an impact on therapeutics in a fundamental way This book is suitable for undergraduate medical students as part of their basic sciences training but is also relevant to interested under and postgraduate science and engineering students It serves as an introductory text for medical registrars in virtually all specialties and is also of value to the General Practitioner wishing to keep up to date especially in view of the growing internet assisted public knowledge of the field There is a special focus on the application of molecular medicine in Africa and in developing countries elsewhere
