Meersman, Zahir Tari, 2003-10-30 This book constitutes the joint refereed proceedings of six international workshops held as part of OTM 2003 in Catania Sicily Italy in November 2003 The 80 revised full workshop papers presented together with various abstracts and summaries were carefully reviewed and selected from a total of 170 submissions In accordance with the workshops the papers are organized in topical main sections on industrial issues human computer interface for the semantic Web and Web applications Java technologies for real time and embedded systems regulatory ontologies and the modelling of complaint regulations metadata for security and reliable and secure middleware

On The Move to Meaningful Internet Systems 2003: OTM 2003 Workshops Zahir Tari, 2003-10-25 missions in fact also treat an envisaged mutual impact among them As for the 2002 edition in Irvine the organizers wanted to stimulate this cross pollination with a program of shared famous keynote speakers this year we got Sycara ble Soley and Mylopoulos and encouraged multiple attendance by providing authors with free access to another conference or workshop of their choice We received an even larger number of submissions than last year for the three conferences 360 in total and the workshops 170 in total Not only can we therefore again claim a measurable success in attracting a representative volume of scientific papers

but such a harvest allowed the program committees of course to compose a high quality cross section of worldwide research in the areas covered In spite of the increased number of submissions the Program Chairs of the three main conferences decided to accept only approximately the same number of papers for presentation and publication as in 2002 i e around 1 paper out of every 4 5 submitted For the workshops the acceptance rate was about 1 in 2 Also for this reason we decided to separate the proceedings into two volumes with their own titles and we are grateful to Springer Verlag for their collaboration in producing these two books The reviewing process by the respective program committees was very professional and each paper in the main conferences was reviewed by at least three referees

Integration Technologies for Industrial Automated Systems Richard Zurawski, 2018-10-03 If there exists a single term that summarizes the key to success in modern industrial automation the obvious choice would be integration Integration is critical to aligning all levels of an industrial enterprise and to optimizing each stratum in the hierarchy While many books focus on the technological components of enterprise information systems *Integration Technologies for Industrial Automated Systems* is the first book to present a comprehensive picture of the technologies methodologies and knowledge used to integrate seamlessly the various technologies underlying modern industrial automation and information systems In chapters drawn from two of Zurawski s popular works *The Industrial Communication Technology Handbook* and *The Industrial Information Technology Handbook* this practical guide offers tutorials surveys and technology overviews contributed by experts from leading industrial and research institutions from around the world The book is organized into sections for cohesive and comprehensive treatment It examines e technologies software and IT technologies communication network based technologies agent based technologies and security in detail as well as their role in the integration of industrial automated systems For each of these areas the contributors discuss emerging trends novel solutions and relevant standards Charting the course toward more responsive and agile enterprise *Integration Technologies for Industrial Automated Systems* gives you the tools to make better decisions and develop more integrated systems

Reliable Software Technologies - Ada-Europe 2001 Dirk Craeynest, Alfred Strohmeier, 2003-06-29 The Sixth International Conference on Reliable Software Technologies Ada Europe 2001 took place in Leuven Belgium May 14 18 2001 It was sponsored by Ada Europe the European federation of national Ada societies in cooperation with ACM SIGAda and it was organized by members of the K U Leuven and Ada Belgium This was the 21st consecutive year of Ada Europe conferences and the sixth year of the conference focusing on the area of reliable software technologies The use of software components in embedded systems is almost ubiquitous planes fly by wire train signalling systems are now computer based mobile phones are digital devices and biological chemical and manufacturing plants are controlled by software to name only a few examples Also other non embedded mission critical systems depend more and more upon software For these products and processes reliability is a key success factor and often a safety critical hard requirement It is well known and has often been experienced that quality cannot be added to software as a mere afterthought

This also holds for reliability Moreover the reliability of a system is not due to and cannot be built upon a single technology A wide range of approaches is needed the most difficult issue being their purposeful integration Goals of reliability must be precisely defined and included in the requirements the development process must be controlled to achieve these goals and sound development methods must be used to fulfill these non functional requirements *Embedded Systems Design* Bruno Bouyssounouse,2005-03-30 This extensive and increasing use of embedded systems and their integration in everyday products mark a significant evolution in information science and technology Nowadays embedded systems design is subject to seamless integration with the physical and electronic environment while meeting requirements like reliability availability robustness power consumption cost and deadlines Thus embedded systems design raises challenging problems for research such as security reliable and mobile services large scale heterogeneous distributed systems adaptation component based development and validation and tool based certification This book results from the ARTIST FP5 project funded by the European Commission By integration 28 leading European research institutions with many top researchers in the area this book assesses and strategically advances the state of the art in embedded systems The coherently written monograph like book is a valuable source of reference for researchers active in the field and serves well as an introduction to scientists and professionals interested in learning about embedded systems design **Middleware 2007** Renato Cerqueira,Roy H. Lindsey,Johnny S. Tolliver,Thomas Lindblad,2005-10-13 JavaTech demonstrates the ease with which Java can be used to create powerful network applications and distributed computing applications It can be used as a textbook for introductory or intermediate level programming courses and for more advanced students and researchers who need to learn Java for a particular task JavaTech is up to date with Java 5 0 BOOK JACKET *Middleware 2008* Valérie Issarny,Richard E. Schantz,2008-11-23 This volume contains the proceedings of the International Middleware Conference held in Leuven Belgium during December 1 4 2008 This year marked the ninth rendition of this annual conference in its current format initially opted in 1998 aspiring to serve as the premier venue focusing exclusively on important middleware results A lot has happened over the intervening 10 year span Middleware has become pervasive in an increasingly interconnected world with its concepts now securely embedded in the notional architectures driving forward the information age The conference continues to be a focal point for important new initiatives and results for new generations of middleware With each succeeding year it has become an even more competitive publishing venue further extending its selectivity this year as well Of the 117 submissions ly 21 were able to receive

acceptance invitations for an acceptance rate of less than 18%. Competitive indeed. Additionally, these submissions continue to come from all over the globe spanning authors from 23 countries. A truly world wide endeavor. But other things have also changed as we turn the corner on the first decade of this conference. In many ways middleware has achieved significant success where it really counts in terms of technical innovations, advanced capabilities, successful ideas, and embedded systems which permeate society, industry, government, and academia. With this success comes maturity.
