Real Time Systems Scheduling Analysis And Verification:

Real-Time Systems Albert M. K. Cheng, 2003-03-13 Test und Validierung spielen bei Echtzeitsystemen eine zentrale Rolle. Auf die Spezifikationen, die der Hersteller angibt, muss sich der Kunde hier in besonders hohem Maße verlassen können. Bisher sind zu diesem Thema nur Artikelsammlungen erschienen. Jetzt liegt endlich ein Buch vor, das sich für Fachleute und Studenten gleichermaßen eignet und dem Leser einen umfassenden Überblick über die verschiedenen existierenden Ansätze verschafft. Vor- und Nachteile jedes Verfahrens werden ausführlich beschrieben, das erleichtert die Methodenwahl in der Praxis. Der Autor ist nicht nur ein anerkannter Experte auf seinem Gebiet, sondern genießt auch einen hervorragenden pädagogischen Ruf.

Embedded systems are mostly distributed and networked for deterministic responses. The book covers how to design networked embedded systems with appropriate protocols for real time requirements. Each chapter contains 2-3 solved case studies and 10 real world problems as exercises to provide detailed coverage and essential pedagogical tools that make this an ideal textbook for students enrolled in electrical and electronics engineering and computer science programs.

New Trends in Software Methodologies, Tools, and Techniques Hamido Fujita, Volker Gruhn, 2004 Software is the essential enabler for the new economy and science. It creates new markets and new directions for a more reliable, flexible and robust society. It empowers the exploration of our world in ever more depth. However, software often falls short behind our expectations. Current software methodologies, tools and techniques remain expensive and not yet reliable for a highly changeable and evolutionary market. Many approaches have been proven only as case by case oriented methods. This book presents a number of new trends and theories in the direction in which we believe software science and engineering may develop to transform the role of software and science in tomorrow's information society. This book is an attempt to capture the essence of a new state of art in software science and its supporting technology. The book also aims at identifying the challenges such a technology has to master and:

- Conceptual Software Models
- Declarative Representation for Software Development
- Requirement Representation and Formalization
- Formal Specification and Language Interpretation
- Legacy Systems and Language Conversions
- Software Quality and Development Measurement and Software Development Practices

Models examples. Each of these chapters contains well reviewed and selected papers so the reader can enjoy the state of the art on the need on such new emerged technology.
