Reason And The Search For Knowledge:

Reason and the Search for Knowledge D. Shapere, 2012-12-06 An impressive characteristic of Dudley Shapere's studies in the philosophy of the sciences has been his dogged reasonableness. He sorts things out with logical care and mastery of the materials and with an epistemological curiosity for the historical happenings which is both critical and respectful. Science changes and the philosopher had better not link philosophical standards too tightly to either the latest orthodox or the provocative upstart in scientific fashions and yet as critic the philosopher must not only master the sciences but also explicate their meanings not those of a cognitive never-never land. Neither dreamer nor pedant, Professor Shapere has been able to practice the modern empiricist's exercises with the sober and stimulating results shown in this volume. He sees that he can be faithful to philosophical analysis, engage in the boldest rational reconstruction of theories and experimental measurements and faithful too empirically. Faithful we may say to both the direct superhighways and the winding pathways of conceptual evolutions and metaphysical revolutions. Not least, Shapere listens. To Einstein and Galileo of course but to the workings of the engineers and the scientific apprentices too and to the various philosophers now and of old who have also worked to make sense of what has been learned and how that has happened and where we might go wrong.

Rules, Reason, and Self-Knowledge Julia Tanney, 2013-01-08 Tanney challenges not only the cognitivist approach that has dominated philosophy and the special sciences for fifty years but metaphysical empirical approaches to the mind in general. Rules, Reason, and Self-Knowledge advocates a return to the world involving circumstance-dependent normative practices where the rational mind has its home.

Principles of Knowledge Representation and Reasoning Luigia Carlucci Aiello, Jon Doyle, Stuart Charles Shapiro, 1996 Principles of Knowledge Representation and Reasoning Bernhard Nebel, Charles Rich, William R. Swartout, 1992 Stringently reviewed papers presented at the October 1992 meeting held in Cambridge, Mass. address such topics as nonmonotonic logic, taxonomic logic, specialized algorithms for temporal, spatial, and numerical reasoning, and knowledge representation issues in planning, diagnosis, and natural language. Knowledge Representation and Reasoning Ronald Brachman, Hector Levesque, 2004-06-17 Knowledge representation is at the very core of a radical idea for understanding intelligence. Instead of trying to understand or build brains from the bottom up, its goal is to understand and build intelligent behavior from the top down, putting the focus on what an agent needs to know in order to behave intelligently. How this knowledge can be represented symbolically and how automated reasoning procedures can make this knowledge available as needed. This landmark text takes the central concepts of knowledge representation developed over the last 50 years and illustrates them in a lucid and compelling way. Each of the various styles of representation is presented in a simple and intuitive form and the basics of reasoning with that representation are explained in detail. This approach gives readers a solid foundation for understanding the more advanced work found in the research literature. The presentation is clear enough to be accessible to a broad audience including researchers and practitioners in database

management information retrieval and object oriented systems as well as artificial intelligence This book provides the foundation in knowledge representation and reasoning that every AI practitioner needs Authors are well recognized experts in the field who have applied the techniques to real world problems Presents the core ideas of KR R in a simple straight forward approach independent of the quirks of research systems Offers the first true synthesis of the field in over a decade

Planning and Learning by Analogical Reasoning Manuela M. Veloso, 1994-12-07 This research monograph describes the integration of analogical and case based reasoning into general problem solving and planning as a method of speedup learning The method based on derivational analogy has been fully implemented in PRODIGY ANALOGY and proven in practice to be amenable to scaling up both in terms of domain and problem complexity In this work the strategy level learning process is cast for the first time as the automation of the complete cycle of construction storing retrieving and flexibly reusing problem solving experience The algorithms involved are presented in detail and numerous examples are given Thus the book addresses researchers as well as practitioners
