Recent Advances In Connective Tissue Res:

Recent Advances in Connective Tissue Research Connective Tissue Society of Australia and New Zealand. Meeting, 1986

The contributions to the workshops included short reviews by invited speakers as well as research papers selected by the Chairmen from the poster abstracts received. The afternoons were free for discussion and recreation but delegates reassembled with the help of Hunter Valley Wines two hours before dinner to review the many posters presented. On the evenings of the 27th and 28th May four review lectures were given by J Dingle The role of messengers of the IL-1 Catabolin type in cartilage turnover R Poole Immunohistochemistry as applied to the study of connective tissues W Comper Biophysical aspects of fluid movement in proteoglycan matrices and P Roughley Changes in proteoglycan structure during cartilage ageing origin and effects. The workshop sessions and review lectures while intense provided much new data in the areas defined and provided useful debates on controversial issues which in some instances still remain unresolved. However the relaxed informal atmosphere of the Salamander Bay resort provided the greatest incentive for open discussion the renewal of old and establishment of new friendships all of which are important aspects of our scientific community. While it was not possible to publish all the papers presented at the Salamander Bay Symposium I trust that those contained herein will provide some indication of the overall quality and scope of the meeting.

International Review of Connective Tissue Research M. A. Epstein, 2013-10-22

International Review of Connective Tissue Research Volume 3 is a collection of papers that deals with the histochemistry of connective tissues. One paper reviews the histochemistry of connective tissues including fibrous components such as collagen reticulum cellulose fibers elastic fibers. Connective tissues known as osteoblasts and odontoblasts produce bone cartilage and teeth. One author examines the biochemistry and pathology of the connective tissue of the periodontium that is related to periodontal disease. He also examines the role of oral bacteria in the pathogenesis of periodontitis. He concludes that bacterial enzymes can increase permeability for other bacterial types to directly elicit inflammation. One author analyzes the physical chemistry of gelatin and gelatin transition. He concludes that the rate of fold formation and the stability of the fold units on single chain gelatins and on multichain gelatins depend on the relative effectiveness of ions. Single chain gelatins have the highest rate of network junction point formation. Multichain gelatins with enhanced cyclic junction point formation have less network forming properties. Cellular biologists pathologists physiologists gerontologists and researchers in gene therapy pharmacology micro or molecular chemistry will find this book highly informative.

International Review of Connective Tissue Research David A. Hall, D. S. Jackson, 2013-10-22

International Review of Connective Tissue Research Volume 6 presents the relationship between structure and function in connective tissue. This book deals with articular cartilage a connective tissue that depends for its function on the integrity of its surface. Organized into six chapters this volume begins with an overview of the structure biology chemistry and biochemistry of collagen. This text then summarizes the data on the construction and application of

collagen products to medicine and surgery Other chapters consider the characteristic of the amino acid composition of basement membranes and the structural features of the synovial joint This book discusses as well the functional properties of collagenous tissues with emphasis on their behavior when internal or external mechanical stresses are applied The final chapter deals with the structure of fresh connective tissue based on conventional histological procedures such as dehydration fixation embedding and staining This book is a valuable resource for biochemists rheologists and physicists Current
