Recent Developments In Several Complex Variables Annals Of Mathematics Studies No 1:

The Madison Symposium on Complex Analysis Edgar Lee Stout, 1992 This volume contains the proceedings of a Symposium on Complex Analysis held at the University of Wisconsin at Madison in June 1991 on the occasion of the retirement of Walter Rudin During the week of the conference a group of about two hundred mathematicians from many nations gathered to discuss recent developments in complex analysis and to celebrate Rudin's long and productive career Among the main subjects covered are applications of complex analysis to operator theory polynomial convexity holomorphic mappings boundary behaviour of holomorphic functions function theory on the unit disk and ball and some aspects of the theory of partial differential equations related to complex analysis Containing papers by some of the world's leading experts in these subjects this book reports on current directions in complex analysis and presents an excellent mixture of the analytic and geometric aspects of the theory

Recent Advances in Algebraic Geometry Christopher D. Hacon, Mircea Mustață, Mihnea Popa, 2015-01-15 Contemporary research in algebraic geometry is the focus of this collection which presents articles on modern aspects of the subject The list of topics covered is a roll call of some of the most important and active themes in this thriving area of mathematics the reader will find articles on birational geometry vanishing theorems complex geometry and Hodge theory free resolutions and syzygies derived categories invariant theory moduli spaces and related topics all written by leading experts The articles which have an expository flavour present an overall picture of current research in algebraic geometry making this book essential for researchers and graduate students This volume is the outcome of the conference Recent Advances in Algebraic Geometry held in Ann Arbor Michigan to honour Rob Lazarsfeld's many contributions to the subject on the occasion of his 60th birthday

Handbook of Geometry and Topology of Singularities VII José Luis Cisneros-Molina, Lê Dũng Tráng, José Seade, 2025-03-01 This is the seventh volume of the Handbook of Geometry and Topology of Singularities a series that aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research This volume consists of fourteen chapters that provide an in depth and reader friendly introduction to various important aspects of singularity theory The volume begins with an outstanding exposition on Jim Damon's contributions to singularity theory and its applications Jim passed away in 2022 and he was one of the greatest mathematicians of recent times having made remarkable contributions to singularity theory and its applications mostly to medical image computing The next chapter focuses on the singularities of real functions and their bifurcation sets Then we look at the perturbation theory of polynomials and linear operators complex analytic frontal singularities the global singularity theory of differentiable maps and the singularities of holomorphic functions from a global point of view The volume continues with an overview of new tools in singularity theory that spring from symplectic geometry and Floer type homology theories Then it looks at the derivation of Lie algebras of isolated singularities and the three dimensional rational isolated complete intersection singularities as well as recent developments in algebraic K stability

and the stable degeneration conjecture This volume also contains an interesting survey on V filtrations a theory began by Malgrange and Kashiwara that can be used to study nearby and vanishing cycle functors and introduced by Deligne Then we present a panoramic view of the Hodge toric and motivic methods in the study of Milnor fibers in singularity theory both from local and global points of view The Monodromy conjecture is also explained this is a longstanding open problem in singularity theory that lies at the crossroads of number theory algebra analysis geometry and topology This volume closes with recent developments in the study of the algebraic complexity of optimization problems in applied algebraic geometry and algebraic statistics The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook

Harmonic and Complex Analysis in Several Variables Steven G. Krantz, 2017-09-20 Authored by a ranking authority in harmonic analysis of several complex variables this book embodies a state of the art entr e at the intersection of two important fields of research complex analysis and harmonic analysis Written with the graduate student in mind it is assumed that the reader has familiarity with the basics of complex analysis of one and several complex variables as well as with real and functional analysis The monograph is largely self contained and develops the harmonic analysis of several complex variables from the first principles The text includes copious examples explanations an exhaustive bibliography for further reading and figures that illustrate the geometric nature of the subject Each chapter ends with an exercise set Additionally each chapter begins with a prologue introducing the reader to the subject matter that follows capsules presented in each section give perspective and a spirited launch to the segment preludes help put ideas into context Mathematicians and researchers in several applied disciplines will find the breadth and depth of the treatment of the subject highly useful

Reviews in Complex Analysis, 1980-1986, 1989 *Explorations in Complex and Riemannian Geometry* John Bland, Kang-Tae Kim, Steven George Krantz, 2003 This book contains contributions by an impressive list of leading mathematicians The articles include high level survey and research papers exploring contemporary issues in geometric analysis differential geometry and several complex variables Many of the articles will provide graduate students with a good entry point into important areas of modern research The material is intended for researchers and graduate students interested in several complex variables and complex geometry

Spinors on Singular Spaces and the Topology of Causal Fermion Systems Felix Finster, Niky Kamran, 2019-06-10 Causal fermion systems and Riemannian fermion systems are proposed as a framework for describing non smooth geometries In particular this framework provides a setting for spinors on singular spaces The underlying topological structures are introduced and analyzed The connection to the spin condition in differential topology is worked out The constructions are illustrated by many simple examples such as the Euclidean plane the two dimensional Minkowski space a conical singularity a lattice system as well as the curvature singularity of the Schwarzschild space time As further examples it is shown how complex and K hler structures can be encoded in Riemannian fermion systems

Summaries of Projects Completed National Science Foundation (U.S.), **Summaries of Projects Completed in Fiscal Year ...**, 1979 Geometric and Spectral Analysis Pierre Albin, Dmitry Jakobson, Frédéric Rochon, 2014-12-01 In 2012 the Centre de Recherches Mathématiques was at the center of many interesting developments in geometric and spectral analysis with a thematic program on Geometric Analysis and Spectral Theory followed by a thematic year on Moduli Spaces Extremality and Global Invariants This volume contains original contributions as well as useful survey articles of recent developments by participants from three of the workshops organized during these programs Geometry of Eigenvalues and Eigenfunctions held from June 4-8 2012 Manifolds of Metrics and Probabilistic Methods in Geometry and Analysis held from July 2-6 2012 and Spectral Invariants on Non compact and Singular Spaces held from July 23-27 2012 The topics covered in this volume include Fourier integral operators eigenfunctions probability and analysis on singular spaces complex geometry Kähler Einstein metrics analytic torsion and Strichartz estimates This book is co published with the Centre de Recherches Mathématiques *Summaries of Projects Completed in Fiscal Year ...* National Science Foundation (U.S.), 1979 **The Wild World of 4-Manifolds** Alexandru Scorpan, 2022-01-26 What a wonderful book I strongly recommend this book to anyone especially graduate students interested in getting a sense of 4 manifolds MAA Reviews The book gives an excellent overview of 4 manifolds with many figures and historical notes Graduate students nonexperts and experts alike will enjoy browsing through it Robion C Kirby University of California Berkeley This book offers a panorama of the topology of simply connected smooth manifolds of dimension four Dimension four is unlike any other dimension it is large enough to have room for wild things to happen but small enough so that there is no room to undo the wildness For example only manifolds of

dimension four can exhibit infinitely many distinct smooth structures Indeed their topology remains the least understood today To put things in context the book starts with a survey of higher dimensions and of topological 4 manifolds In the second part the main invariant of a 4 manifold the intersection form and its interaction with the topology of the manifold are investigated In the third part as an important source of examples complex surfaces are reviewed In the final fourth part of the book gauge theory is presented this differential geometric method has brought to light how unwieldy smooth 4 manifolds truly are and while bringing new insights has raised more questions than answers The structure of the book is modular organized into a main track of about two hundred pages augmented by extensive notes at the end of each chapter where many extra details proofs and developments are presented To help the reader the text is peppered with over 250 illustrations and has an extensive index
