Morphology Edwin Williams, 2011-02-25 Regimes of Derivation in Syntax and Morphology presents a theory of the
architecture of the human linguistic system that differs from all current theories on four key points First the theory rests on a
modular separation of word syntax from phrasal syntax where word syntax corresponds roughly to what has been called
derivational morphology Second morphosyntax corresponding to what is traditionally called inflectional morphology is the
immediate spellout of the syntactic merge operation and so there is no separate morphosyntactic component There is no LF
logical form derived that is there is no structure which mirrors semantic interpretation LF instead semantics interprets the
derivation itself And fourth syntactic islands are derived purely as a consequence of the formal mechanics of syntactic
derivation and so there are no bounding nodes no phases no subadjacency and in fact no absolute islands Lacking a
morphosyntactic component and an LF representation are positive benefits as these provide temptations for theoretical
mischiefs The theory is a descendant of the author's Representation Theory and so inherits its other benefits as well including
explanations for properties of reconstruction remnant movement improper movement and scrambling scope interactions and
the different embedding regimes for clauses and DPs Syntactic islands are added to this list as special cases of improper
movement **The Cambridge Handbook of Generative Syntax** Marcel den Dikken, 2013-07-25 Syntax the study of

sentence structure has been at the centre of generative linguistics from its inception and has developed rapidly and in
various directions The Cambridge Handbook of Generative Syntax provides a historical context for what is happening in the
field of generative syntax today a survey of the various generative approaches to syntactic structure available in the
literature and an overview of the state of the art in the principal modules of the theory and the interfaces with semantics
phonology information structure and sentence processing as well as linguistic variation and language acquisition This

indispensable resource for advanced students professional linguists generative and non generative alike and scholars in related fields of inquiry presents a comprehensive survey of the field of generative syntactic research in all its variety written by leading experts and providing a proper sense of the range of syntactic theories calling themselves generative

Interdisciplinary Approaches to Language C. Georgopoulos, Roberta Ishihara, 2012-12-06 The thirty two papers in this collection are offered to Professor S Y Kuroda by his friends as a gesture of their deep respect and enduring affection One of the many ways in which Professor Kuroda has impressed us all is in the breadth of his interests and areas of expertise He is one of those rare scholars whose work and interests span the whole range of his discipline He is a figure of such intellectual stature that he has inspired influenced and encouraged researchers in an astonishing variety of projects He continues to do so at an unslackened pace today just as his own productivity remains vigorous But mention of Yuki's inspiration and influence is inadequate without mention of his special humorousness his mischievous wit his charm and as a friend has added a unique warmth Knowing Yuki and counting him quality to our lives We who have contributed to this collection have done so in partial acknowledgement of and gratitude for this benign and masterful influence The contributions to the collection reflect the range of Yuki's own interests and cover a rich variety of approaches to the analysis of natural language These include papers in philosophy psychology computer science artificial intelligence and linguistics and within linguistics the entire

Partitions and Atoms of Clause Structure Dominique Sportiche, 2005-10-05 This collection brings together some of Dominique Sportiche's best work including essays that are published here for the first time The articles discuss the architecture of syntax in natural languages and Sportiche suggests that languages do not differ at all in their syntactic organization This view takes shape through the analysis of a variety of syntactic configurations and essays examine what it means to be a Subject how Case marking functions how it relates to Agreement and how Pronominal Clitic Constructions should be analyzed

The Equilibrium of Human Syntax Andrea Moro, 2013-09-13 This book assembles a collection of papers in two different domains formal syntax and neurolinguistics Here Moro provides evidence that the two fields are becoming more and more interconnected and that the new fascinating empirical questions and results in the latter field cannot be obtained without the theoretical base provided by the former The book is organized in two parts Part 1 focuses on theoretical and empirical issues in a comparative perspective including the nature of syntactic movement the theory of locality and a far reaching and influential theory of copular sentences Part 2 provides the original sources of some innovative and pioneering experiments based on neuroimaging techniques focusing on the biological nature of recursion and the interpretation of negative sentences Moro concludes with an assessment of the impact of these perspectives on the theory of the evolution of language The leading and pervasive idea unifying all the arguments developed here is the role of symmetry breaking in syntax and in the relationship between language and the human brain

Freezing Jutta Hartmann, Marion Jäger, Andreas Kehl, Andreas Konietzko, Susanne Winkler, 2018-09-24 Displacement is a fundamental property of human language and the restrictions on

displacement have been a central concern in generative grammar ever since Ross 1967 ground breaking observations of island constraints While island phenomena have been investigated in detail from various perspectives a different domain the domain of Freezing originally defined in terms of non base structures has received far less attention This volume brings together papers that address the questions of What are the different concepts of Freezing Which empirical domains can they explain Is Freezing a core syntactic restriction or does information structure or processing play a role The collection of papers provides insights into the empirical basis of the Freezing Principle in relation to other restrictions on extraction in order to contribute to a broader understanding of the nature of restrictions on displacement in language The overall goal of the volume is a reconsideration of Freezing and other sub extraction phenomena both from a theoretical and empirical perspective by bringing together contributions from experts in the field to discuss and broaden our knowledge of the empirical range of Freezing phenomena as well as their explanation

Linguistic Theory in America Frederick J.

Newmeyer, 2014-06-28 **Binding and Filtering** Frank Heny, 1981 The essays collected in this book result from recent work in trace theory the starting point being Chomsky s proposals to permit syntax to over generate profusely and then to provide most of the significant reduction in the form of a system of filters and constraints on logical form They all address various aspects and implications of his article On Binding which is reprinted here Equally important the essays demonstrate the applicability of Chomsky s proposals to a number of different languages Heny writes that editorial work on the volume brought me to a realization of the far reaching implications of the approach to linguistic analysis underlying Chomsky s On Binding It constitutes a radical break with his previous work of a very exciting and promising kind Heny s Introduction goes on to describe the shift in Chomsky s position over the last ten years in lucid and straightforward fashion identifying the striking new properties of this framework and making the collection generally more accessible to a wider audience Contents Introduction On Binding Noam Chomsky Finiteness and Boundedness in Turkish Lelan George and Jaklin Kornfilt Nominative Marking in Italian Infinitives and the Nominative Island Constraint Luigi Rizzi Empty Subjects Case and Agreement and the Grammar of Dutch Eric J Reuland Binding Quantifiers Clitics and Control Richard S Kayne Government and Relativisation in Celtic Stephen Harlow Germanic Word Order and the Format of Surface Filters Joan Maling and Annie Zaenen Quechua Word Structure Pieter Muysken Index Frank Heny is Professor of Linguistics and the Philosophy of Language and Head of the Institute of General Linguistics at the University of Groningen Holland Distributed in North America for Croom Helm Publishers Ltd

Problems of seem/scheinen Constructions and their Implications for the Theory of Predicate Sentential Complementation Susan Olsen, 2011-04-20 Over the past few decades the book series Linguistische Arbeiten Linguistic Studies comprising over 500 volumes has made a significant contribution to the development of linguistic theory both in Germany and internationally The series will continue to deliver new impulses for research and maintain the central insight of linguistics that progress can only be made in acquiring new knowledge about

human languages both synchronically and diachronically by closely combining empirical and theoretical analyses To this end we invite submission of high quality linguistic studies from all the central areas of general linguistics and the linguistics of individual languages which address topical questions discuss new data and advance the development of linguistic theory

Language, Syntax, and the Natural Sciences Ángel J. Binkert,2019-06-17 No detailed description available for Generative Grammar without Transformations *Reduced Constructions in Spanish (RLE Linguistics E: Indo-European Linguistics)* John C. Moore,2014-01-10 This book discusses a class of Reduced Constructions which exhibit both mono and bi clausal characteristics In Spanish as well as other Romance languages the most salient mono clausal characteristic is the possibility of clitic climbing i e the possibility of an object clitic attaching to a verb that is higher in the appropriate sense than the verb which selects the object to which the clitic corresponds Reduced constructions come in essentially two varieties clause reduction or restructuring constructions and union or causative perception verb constructions There has been a good deal of work on a number of aspects of reduced constructions here the author discusses work in three areas the analysis of pronominal clitics the structure of clause reduction and union constructions and how these treatments interact with the analysis of clitics to yield an account of clitic climbing and the encoding of embedded subjects in union constructions
