Geometry of Polynomials Morris Marden, 1949-12-31 During the years since the first edition of this well known monograph appeared the subject the geometry of the zeros of a complex polynomial has continued to display the same outstanding vitality as it did in the first 150 years of its history beginning with the contributions of Cauchy and Gauss Thus the number of entries in the bibliography of this edition had to be increased from about 300 to about 600 and the book enlarged by one third It now includes a more extensive treatment of Hurwitz polynomials and other topics The new material on infrapolynomials abstract polynomials and matrix methods is of particular interest **The Vienna Circle** Friedrich Stadler, 2015-05-08 This abridged and revised edition of the original book Springer Wien New York 2001 offers the only comprehensive history and documentation of the Vienna Circle based on new sources with an innovative historiographical approach to the study of science With reference to previously unpublished archival material and more recent literature it refutes a number of widespread clichés about neo positivism or logical positivism Following some insights on the relation between the history of science and the philosophy of science the book offers an accessible introduction to the complex subject of the rise of scientific philosophy in its socio cultural background and European philosophical networks till the forced migration in the Anglo Saxon world The first part of the book focuses on the origins of Logical Empiricism before World War I and the development of the Vienna Circle in Red Vienna with the Verein Ernst Mach its fate during Austro Fascism Schlick's murder 1936 and its final expulsion by National Socialism beginning with the Anschluss in 1938 It analyses the dynamics of the Schlick Circle in the intellectual context of late enlightenment including the minutes of the meetings from 1930 on for the first time published and presents an extensive description of the meetings and international Unity of Science conferences between 1929 and 1941 The chapters introduce the leading philosophers of the Schlick Circle e.g. Hans Hahn Otto Neurath Rudolf Carnap Philipp Frank Felix Kaufmann Edgar Zilsel and describe the conflicting interaction between Moritz Schlick and Otto Neurath the long term communication between Moritz Schlick Friedrich Waismann and Ludwig Wittgenstein as well as between the Vienna Circle with Heinrich Gomperz and Karl Popper In addition Karl Menger's Mathematical Colloquium with Kurt Gödel is presented as a parallel movement The final chapter of this section describes the demise of the Vienna Circle and the forced exodus of scientists and intellectuals from Austria The second part of the book includes a bio bibliographical documentation of the Vienna Circle members and for the first time of the assassination of Moritz Schlick in 1936 followed by an appendix comprising an extensive list of sources and literature **Theory of Sensitivity in Dynamic Systems** Mansour Eslami, 2013-11-09 This book provides a comprehensive treatment of the

development and present state of the theory of sensitivity of dynamic systems It is intended as a textbook and reference for researchers and scientists in electrical engineering control and information theory as well as for mathematicians The extensive and structured bibliography provides an overview of the literature in the field and points out directions for further research

Decomposability P. J. Courtois, 2014-06-20 Decomposability Queueing and Computer System Applications presents a set of powerful methods for systems analysis This 10 chapter text covers the theory of nearly completely decomposable systems upon which specific analytic methods are based The first chapters deal with some of the basic elements of a theory of nearly completely decomposable stochastic matrices including the Simon Ando theorems and the perturbation theory The succeeding chapters are devoted to the analysis of stochastic queueing networks that appear as a type of key model These chapters also discuss congestion problems in information processing systems which could be studied by the queueing network models A method of analysis by decomposition and aggregation for these models is proposed Other chapters highlight the problem of computer system performance evaluation specifically the analysis of hardware and software of the dynamic behavior of computer systems and user programs These topics are followed by a description of an aggregative model of a typical multiprogramming time sharing computer system The last chapter examines the existing affinity between the concept of aggregate in nearly completely decomposable structures and the notions of module and level of abstraction so frequently invoked in computer system design and software engineering This book will prove useful to both hardware and software designers and engineers as well as scientists who are investigating complex systems
