Recent Advances In Nervous System Toxicology:

Recent Advances in Nervous System Toxicology Corrado L. Galli, Luigi Manzo, Peter S. Spencer, 2012-12-06 This volume addresses some facets of the adverse actions of chemical agents on the central and peripheral nervous systems in developing and mature states Some of the effects of these chemicals are short lasting and rapidly reversible others especially those that cause structural damage to the nervous system may result in permanent damage to the organism The nervous system has several levels of vulnerability to toxic substances Some substances perturb ion channels or synaptic mechanisms required for the orderly transfer of electrochemical information within the nervous system Others disrupt sites required for the maintenance of cellular integrity and these variably result in degenerative responses of neurons and myelinating cells Further sites of vulnerability include the delicate neural vasculature and neurohumeral mechanisms responsible for physiological homeostasis The science of neurotoxicology inevitably is a multidisciplinary endeavor with contributions from biochemistry physiology morphology and behavior to name a few The challenge is to apply appropriate techniques to investigate neurotoxic phenomena The first logical step in this analysis is to determine from the point of view of the nervous system the nature of the exposure Is the chemical a single or multiple entity is it metabolized how does it gain access to neural tissue Once these factors are understood changes induced by the exposure can be described at various levels from the biochemical to the behavioral

Occupational Neurotoxicology Lucio G. Costa, Luigi Manzo, 2020-04-14 First published in 1988 many chemical compounds present in workplace settings can produce a number of impairments in the human nervous system As the situations in which neurotoxic agents have been recognized in exposed workers has grown so has the importance of occupational neurotoxicology as a specialty Addressing some of the most vital concerns in the field Occupational Neurotoxicology discusses Neurotoxic agents commonly encountered in the workplace Signs and symptoms of neurotoxicity and of the factors affecting neurotoxic effects Biological monitoring and the use of biomarkers Epidemiological methods and clinical approaches to occupational neurotoxicology The analysis of behavioral electrophysiological and imaging techniques in the diagnosis of neurotoxicity Occupational neurotoxicity in developing countries The evaluation and management of occupational illnesses due to neurotoxicity Occupational Neurotoxicology concisely covers important facts on the adverse effects of chemical biological and physical agents that can impair or alter the structure of the nervous system Professionals and researchers in the fields of occupational medicine toxicology epidemiology neurology industrial hygiene and psychology will all find relevant information on the health problems that can occur from exposure to neurotoxicants
