Applications of Affine and Weyl Geometry Eduardo García-Río, Peter Gilkey, Stana Nikčević, Ramón Vázquez-Lorenzo, 2022-05-31 Pseudo Riemannian geometry is to a large extent the study of the Levi Civita connection which is the unique torsion free connection compatible with the metric structure There are however other affine connections which arise in different contexts such as conformal geometry contact structures Weyl structures and almost Hermitian geometry In this book we reverse this point of view and instead associate an auxiliary pseudo Riemannian structure of neutral signature to certain affine connections and use this correspondence to study both geometries We examine Walker structures Riemannian extensions and Kähler Weyl geometry from this viewpoint This book is intended to be accessible to mathematicians who are not expert in the subject and to students with a basic grounding in differential geometry Consequently the first chapter contains a comprehensive introduction to the basic results and definitions we shall need proofs are included of many of these results to make it as self contained as possible Para complex geometry plays an important role throughout the book and consequently is treated carefully in various chapters as is the representation theory underlying various results It is a feature of this book that rather than as regarding para complex geometry as an adjunct to complex geometry instead we shall often introduce the para complex concepts first and only later pass to the complex setting The second and third chapters are devoted to the study of various kinds of Riemannian extensions that associate to an affine structure on a manifold a corresponding metric of neutral

signature on its cotangent bundle These play a role in various questions involving the spectral geometry of the curvature operator and homogeneous connections on surfaces The fourth chapter deals with Kähler Weyl geometry which lies in a certain sense midway between affine geometry and Kähler geometry Another feature of the book is that we have tried wherever possible to find the original references in the subject for possible historical interest Thus we have cited the seminal papers of Levi Civita Ricci Schouten and Weyl to name but a few exemplars We have also given different proofs of various results than those that are given in the literature to take advantage of the unified treatment of the area given herein

Algebraic Structures and Their Representations José Antonio de la Peña, Ernesto Vallejo, Natig M. Atakishiyev, 2005 The Latin American conference on algebra the XV Coloquio Latinoamericano de Algebra Cocoyoc Mexico consisted of plenary sessions of general interest and special sessions on algebraic combinatorics associative rings cohomology of rings and algebras commutative algebra group representations Hopf algebras number theory quantum groups and representation theory of algebras This proceedings volume contains original research papers related to talks at the colloquium In addition there are several surveys presenting important topics to a broad mathematical audience There are also two invited papers by Raymundo Bautista and Roberto Martinez founders of the Mexican school of representation theory of algebras The book is suitable for graduate students and researchers interested in algebra
