Recent Studies in Atomic and Molecular Processes Arthur E. Kingston, 2012-12-06 Sir David Bates celebrated his seventieth birthday on the 18th November 1986 To mark this event a conference was held in the David Bates building at The Queen's University of Belfast on the 17th and 18th November 1986 At this conference ex students and colleagues of Sir David who are acknowledged world experts in their field of research gave in depth reviews of a particular area of atomic and molecular physics This book on the conference presents a unique account of recent studies in atomic and molecular processes in a wide range of research fields This volume is dedicated to Sir David by his friends as a token of their affection and respect It is hoped that it will provide a useful summary of current research in atomic and molecular physics and that it will also show the great contribution which Sir David made to atomic and molecular physics This conference was supported by the USAF European Office of Aerospace Research and Development who we wish to thank for their generous support

Advances in Atomic, Molecular, and Optical Physics , 2011-08-09 Volume 55 of the Advances in Atomic Molecular and Optical Physics Series contains seven contributions covering a diversity of subject areas in atomic molecular and optical physics In their contribution Stowe Thorpe Peter Ye Stalnaker Gerginov and Diddams explore recent developments in direct frequency comb spectroscopy Precise phase coherence among successive ultrashort pulses of a frequency comb allows one to probe fast dynamics in the time domain and high resolution structural information in the frequency domain for both atoms and molecules The authors provide a detailed review of some of the current applications that exploit the unique features of frequency comb spectroscopy and discuss its future directions Yurvsky Olshanii and Weiss review theory and experiment of elongated atom traps that confine ultracold gases in a quasi one dimensional regime Under certain conditions these quasi one dimensional gases are well described by integrable one dimensional many body models with exact quantum solutions Thermodynamic and correlation properties of one such model that has been experimentally realized are reviewed DePaola Morgenstein and Andersen discuss magneto optical trap recoil ion momentum spectroscopy MOTRIMS exploring collisions

between a projectile and target resulting in charged target fragments MOTRIMS combines the technology of laser cooling and trapping of target atoms with the momentum analysis of the charged fragments that recoil from the target The authors review the different MOTRIMS experimental approaches and the spectroscopic and collisional investigations performed so far Safronova and Johnson give an overview of atomic many body perturbation theory and discuss why extensions of the theory are needed They present all order results based on a linearized version of coupled cluster expansions and apply the theory to calculations of energies transition matrix elements and hyperfine constants Another contribution on atomic theory authored by Fischer explores the advantages of expanding the atomic radial wave functions in a B spline basis The differential equations are replaced by non linear systems of equations and the problems of orthogonality requirements can be dealt with using projection operators Electron ion collisional processes are analyzed by Mueller including descriptions of the experimental techniques needed to obtain cross section data and typical values for these cross sections The present status of the field is discussed in relation to the detailed cross sections and rate coefficients that are needed for understanding laboratory or astrophysical plasmas Finally Duan and Monroe review ways to achieve scalable and robust quantum communication state engineering and quantum computation Using radiation and atoms ions or atomic ensembles they show that they can construct scalable quantum networks that are inherently insensitive to noise Progress in experimental realization of their proposals is outlined International experts Comprehensive articles New developments Trends in Atomic and Molecular Physics Krishan K. Sud, Upendra N. Upadhyaya, 2012-12-06 Contemporary research in atomic and molecular physics concerns itself with studies of interactions of electron positron photons and ions with atoms molecules and clusters interactions of intense ultrashort laser interaction with atoms molecules and solids laser assisted atomic collisions optical and magnetic traps of neutral atoms to produce ultracold and dense samples high resolution atomic spectroscopy and experiments by using synchrotron radiation sources and ion storage rings In recent years important advances have been made in the experimental as well as theoretical understanding of atomic and molecular physics The advances in atomic and molecular physics have helped us to understand many other fields like astrophysics atmospheric physics environmental science laser physics surface physics computational physics photonics and electronics XII National Conference on Atomic and Molecular Physics was held at the Physics Department M 1 S University Udaipur from 29th Dec 1998 to 2nd Jan 1999 under the auspices of the Indian Society of Atomic and Molecular Physics This volume is an outcome of the contributions from the invited speakers at the conference The volume contains 24 articles contributed by the distinguished scientists in the field The contributors have covered a wide range of topics in the field in which current research is being done This also reflects the trend of research in this field in Indian universities and research institutes We are grateful to the national programme committee national and local organizing committees and members of the Physics Department and Computer Centre M 1

The Fundamentals of Atomic and Molecular Physics Robert L Brooks, 2014-07-08 The Fundamentals of Atomic and Molecular Physics is intended as an introduction to the field for advanced undergraduates who have taken quantum mechanics Each chapter builds upon the previous using the same tools and methods throughout As the students progress through the book their ability to use these tools will steadily increase along with their confidence in their efficacy The book treats the two electron atom as the simplest example of the many electron atom as opposed to using techniques that are not applicable to many electron atoms so that it is unnecessary to develop additional equations when turning to multielectron atoms such as carbon External fields are treated using both perturbation theory and direct diagonalization and spontaneous emission is developed from first principles Only diatomic molecules are considered with the hydrogen molecular ion and neutral molecule treated in some detail This comprehensive coverage of the quantum mechanics of complex atoms and simple diatomic molecules developed from the very basic components is extremely useful for students considering graduate studies in any area of physics
