Receptor Events And Transduction In Taste And Olfaction:

Chemical Senses Joseph G. Brand, John H. Teether, Robert H. Cagan, Morley R. Kare, 2021-05-30 This book focuses on the initial biochemical and biophysical aspects of taste and olfaction It is intended for a wide audience both those already familiar with the chemical senses and those biochemists and neuro biologists interested in gaining an appreciation of this rapidly expanding discipline

Experimental Cell Biology of Taste and Olfaction Andrew I. Spielman, Joseph G. Brand, 1995-07-12 Experimental Cell Biology of Taste and Olfaction examines and adapts methods from a variety of established fields such as neurophysiology receptor biochemistry and cellular imaging to provide comprehensive coverage of current techniques and protocols in chemosensory cell biology Written for both newcomers and established scientists this volume offers numerous tips for problem solving and suggests ways to avoid the most common and costly mistakes made by researchers This book covers general aspects such as tissue collection and preparation as well as specific up to date methods used in taste and olfactory morphology immunology biochemistry biophysics electrophysiology and molecular biology The explosion of knowledge and the increased interest in these areas make this book an important reference work for all scientists students and teachers in this and related fields

Chemical Senses Joseph G. Brand, 1989-08-29 This book focuses on the initial biochemical and biophysical aspects of taste and olfaction It is intended for a wide audience both those already familiar with the chemical senses and those biochemists and neuro biologists interested in gaining an appreciation of this rapidly expanding discipline

Olfaction and Taste XI Kenzo Kurihara, Noriyo Suzuki, Hisashi Ogawa, 2013-11-11 In this compendium of current studies on olfaction and taste the most comprehensive yet to appear in this series the chemical senses are elucidated from points of view ranging from anatomy electrophysiology molecular biology especially chemoreceptor gene cloning biochemistry and psychophysics to the latest clinical and technological applications of chemosensory research Specific topics include the structure and function of the tastebud and olfactory epithelium the genetics and mechanisms of olfactory and taste transduction the chemistry and function of flavor compounds the psychophysics of taste and olfaction in daily human life the brain mechanisms of coding learning and memory in olfaction and taste the clinical assessment of taste and olfaction with special reference to aging and disorders noninvasive measurements of human olfactory and taste responses for therapeutic purposes artificial sensing devices chemoreception in aquatic organisms and other species and chemosensory transduction in insects With its multidisciplinary approach this volume will be an invaluable source of information not only for researchers clinicians and students but also for technologists in fields such as artificial sensing perfumery brewery food chemistry aquafarming and agriculture

Fish Chemoreception T.J. Hara, 2012-12-06 This book describes in general how the chemosensory systems of fish function at various levels In many ways fish are typical vertebrates differing only slightly from other vertebrates including humans In other ways their aquatic environment imposes strict requirements or offers unique opportunities which have resulted in some unusual functions

having no counterpart in higher vertebrates This new volume is necessitated by advances in many vital areas as the field of chemical senses continues to grow at a rapid pace Most significant is the application of the contemporary electrophysiological technique of patch clamping recognition of a second messenger system in chemosensory transduction processes and the identification of hormonal pheromones in fish reproductive behaviour The last major synthesis of our knowledge about fish chemoreception Chemoreception in Fishes was published ten years ago Elsevier Amsterdam 1982 In that volume four aspects of fish chemoreception Le morphology of the peripheral chemoreceptors primary sensory processes roles in behaviour and its interactions with environment were discussed This book is intended to be helpful to students scientists and aquaculturists not only as a source book but also as a textbook on chemical senses

Handbook of Olfaction and Gustation Richard L. Doty, 2015-05-11 The largest collection of basic clinical and applied knowledge on the chemical senses ever compiled in one volume the third edition of Handbook of Olfaction and Gustation encompasses recent developments in all fields of chemosensory science particularly the most recent advances in neurobiology neuroscience molecular biology and modern functional imaging techniques Divided into five main sections the text covers the senses of smell and taste as well as sensory integration industrial applications and other chemosensory systems This is essential reading for clinicians and academic researchers interested in basic and applied chemosensory perception

Biochemistry of Taste and Olfaction Robert Cagan, 2012-12-02 Biochemistry of Taste and Olfaction examines the biochemical aspects of taste and olfaction and their relevance to nutrition medicine and food science More specifically it considers the biological processes that influence dietary habits nutritional status and enjoyment of food as well as other important social and biological phenomena It also describes biochemical mechanisms at the peripheral receptor level in taste and olfaction with emphasis on the role of the cell surface along with neurotransmitters and other neurochemical aspects of the olfactory system Organized into five sections comprised of 24 chapters this book begins with an overview of biochemical approaches used in studying the phenomena of taste and olfaction It then proceeds with a discussion of olfactory receptor mechanisms the accessibility of odorant molecules to the receptors the role of cilia in olfactory recognition and the involvement of receptor proteins in vertebrate olfaction Middle chapters focus on the chemosensation major histocompatibility complex and olfactory receptors taste receptor mechanisms biochemistry of sugar reception in insects intensity time phenomena in sugar sweetness and recognition of taste stimuli at the initial binding interaction The reader is also introduced to the physicochemical principles of taste and olfaction molecular mechanisms of transduction in chemoreception biochemical mechanisms in vertebrate primary olfactory neurons neurotransmitter biochemistry of the mammalian olfactory bulb and chemical sensing by bacteria Examples of chemical sensory systems are included This book will be of interest to biochemists physiologists neurobiologists neuroscientists molecular biologists food scientists students and specialists in psychology neurophysiology organic chemistry and nutrition

The Physiology of Fishes, Second Edition David H. Evans, James B.

Claiborne,1997-10-10 As in the bestselling first edition *The Physiology of Fishes* Second Edition is a comprehensive state of the art review of the major areas of research in modern fish physiology This Second Edition is entirely revised with 17 of the 18 chapters written by new authors It also includes four entirely new chapters **Tasting and Smelling** Gary K. Beauchamp,Linda Bartoshuk,1997-09-05 Tasting and Smelling presents a comprehensive overview to research on these two important modes of perception The book offers a review of research findings on the biophysics neurophysiology and psychophysicsof both senses as well as discussing the emotional component associated with taste and smell and clinical disorders affecting each of these two senses Tasting and Smelling answers how odors and flavors are perceived why we have favorites and what happens when our senses go awry This book is of interest to the researcher in perception cognition or neurophysiology **Physical Chemistry of Foods** Henry G. Schwartzberg,Richard W. Hartel,1992-06-11 This resource provides effective mechanistic methods for analyzing and understanding physical and chemical behaviour in foods and explains how to manipulate and control such behaviour during food processing distribution and use Written by 23 authorities in the field Physical Chemistry of Foods treats factors controlling crystallization cross linking reactions dispersion and surface adsorption processes in foods and clarifies how to modify crystal size distribution stabilize dispersions and minimize fouling explores uptake competition between mineral nutrients offering guidelines for efficient uptake and absorption describes kinetic rate controlling steps in Maillard reactions examining how to manipulate Maillard browning discusses how gels form and instrumental methods of following gelling processes and covers how to create gel based textures and structures in foods considers factors that control the behaviour of bread during dough development proofing and baking showing how carbon dioxide release affects loaf expansion and reveals how glass transitions affect rheological and kinetic behaviour and transport processes in foods detailing how to manipulate glass transitions and product behaviour by changes in composition and water content Food scientists and technologists food agricultural and bioresource engineers physical and surface chemists nutritionists and upper level undergraduate and graduate students and industrial trainees in these disciplines will repeatedly find valuable new insights and approaches for dealing with practical and theoretical problems and a wealth of useful information in Physical Chemistry of Foods with its more than 1380 literature citations *The Scientific Basis of Eating* Roger W. A. Linden,1998 Eating is defined as the act of taking food into the mouth chewing and then swallowing it for nourishment The purpose of this volume is to present a number of up to date scientific reviews on the mechanisms involved in the process of eating and to introduce the reader to some of the problems encountered when these complex processes malfunction Topics include a discussion on the peripheral mechanisms of taste and smell taste and olfactory processing in the brain and its relation to the control of eating and a section on mastication with an account of the scientific basis of masticatory disorders The control mechanisms involved in salivation and swallowing are also extensively reviewed Because this book reviews the fundamental understanding of the physiological mechanisms involved in eating and

includes an insight into the scientific basis of the malfunction of these mechanisms it will be of equal value to both clinical and basic scientists In particular basic and clinical oral biologists and neurophysiologists dental and medical researchers and postgraduate students will find it a valuable source of information

Chemical Senses, Vol. I Joseph G. Brand,1989 **Perfumes** P.M.

Muller,D. Lamparsky,2012-12-06 The idea of publishing this book on Perfumes Art Science and Technology grew out of the observation that on the verge of the 1990s there was really no state of the art compilation of the relevant know how on which the fragrance industry is based It was obvious that such a compilation would be well received not only by perfumers and fragrance chemists but also by those involved in related trade and marketing or in the development and distribution of consumer products by researchers from other fields by students and finally by amateurs of perfumes in general Therefore we set out to find competent authors who were willing to contribute to the endeavour and we did not do this unselfishly on the

contrary we selected a wish list of specialists who would provide us with new insight and characterize the trends and research priorities determining the future Thus we were counting on learning much ourselves in the course of the project We were more than pleasantly surprised by the reactions to our first letter and so was Elsevier We certainly had not expected perfumers who are usually much more doers than writers to react in such an enthusiastic way especially the spontaneous affirmative answer from the famous E Roudnitska created a momentum which contributed significantly to the successful completion of this book But of course we should not create the impression that the other authors chapters are less important and we thank all of them heartily for their invaluable effort
