Reduplication Doubling In Morphology:

Reduplication Sharon Inkelas, 2005 This groundbreaking new study takes a novel approach to reduplication a phenomenon whereby languages use repetition to create new words Sharon Inkelas and Cheryl Zoll argue that the driving force in reduplication is identity at the morphosyntactic not the phonological level and present a new model of reduplication Morphological Doubling Theory that derives the full range of reduplication patterns This approach shifts the focus away from the relatively small number of cases of phonological overapplication and underapplication which have played a major role in earlier studies to the larger class of cases where base and reduplicant diverge phonologically The authors conclude by arguing for a theoretical shift in phonology which entails more attention to word structure As well as presenting the authors pioneering work this book also provides a much needed overview of reduplication the study of which has become one of the most contentious in modern phonological theory

The Oxford Handbook of Morphological Theory Jenny Audring, Francesca Masini, 2019 This volume is the first handbook devoted entirely to the multitude of frameworks adopted in the field of morphology It offers critical discussions of the main theoretical issues in word formation and inflection a detailed guide to each morphological theory and explorations into the relationship between morphological theory and other fields

Exact Repetition in Grammar and Discourse Rita Finkbeiner, Ulrike Freywald, 2018-09-24 Most scholars define reduplication as a formally restricted grammatical process neatly distinguishing it from mere repetition as a discursual option However there is a fuzzy grey area between the two processes that has rarely been explored so far In this timely collection the phenomenon of exact repetition understood broadly as the systematic iteration of one and the same linguistic item within relatively close syntactic proximity is investigated from a number of angles The volume contains studies from phonology morphology syntax semantics and pragmatics and deals with a broad range of languages including alleged reduplication avoiders In bringing together different theoretical perspectives phenomenological domains and methodologies and in linking the fields of syntax and discourse to those of morphology and morphophonology the volume provides new insights into the structure and meaning of exact

repetition phenomena and more generally into their status within a theory of language The collection will appeal to formally and functionally oriented scholars from all subfields of linguistics including typology **The Study of Language** George Yule, 2014-04-28 Easy to follow simple to understand broad yet concise the fundamental introduction to language Includes thirty new tasks **Constructions with Lexical Repetitions in East Slavic** Mikhail Kopotev, Kyongjoon Kwon, 2024-07-01 Repetition is a well studied phenomenon in morphology and lexicology but has received less attention on the syntactic level The book sheds light on syntactic constructions with lexical repetition in East Slavic languages Several contributions address syntactic constructions that have developed in form and meaning in accordance with general tendencies found in many languages for example English Boys will be boys However most chapters focus on constructions that resist typological explanation for example Rus trouble nom sg so trouble nom sg Ukr fool nom sg fool ins sg *Proceedings of the 22nd Annual UCLA Indo-European Conference* Brent Vine, H.
