Development of analytical reference materials for refuse derived fuels Stephen L. Law,Benjamin W. Haynes,William Joseph Campbell,1980 *Utilization of Refuse Derived Fuels by the United States Navy* D. L. Lehr,COLORADO UNIV AT BOULDER DEPT OF CIVIL ENGINEERING.,1983 The Resource Conservation and Recovery Act and the Safe Drinking Water Act are forcing those in charge of landfills to adhere to more stringent operating standards This along with the growing scarcity of landfill availability makes the use of landfills less desirable for solid waste disposal As such new disposal methods that are environmentally safe and economically practical must be found One alternative that is not really new but which has gained renewed interest is incineration The Resource Conservation and Recovery Act also requires that government agencies should direct their installations to recover as many resources as possible Therefore if incineration is to be implemented heat recovery should be incorporated into the system There are several processes available to convert raw refuse into a fuel for use in a heat recovery system Refuse derived fuels RDF can be in the form of raw refuse densified refuse powdered refuse gas or pyrolytic oil The only form of RDF that is economically feasible for systems designed to process less than 200 TPD tons per day is raw refuse Most Navy bases generate far less than 200 TPD of solid waste and therefore the Navy has focused most of its attention on modular heat recovery incinerator HRI systems that utilize raw refuse as fuel **The Use of Waste Oils to Improve Densified Refuse Derived Fuels** ,1980 Refuse-derived Fuel (RDF) and Densified Refuse-derived Fuel (d-RDF) Marc L. Joensen,IOWA STATE UNIV AMES.,1986 This investigation was conducted to document and review all data associated with densified refuse derived fuel dRDF its preparation and properties storage and handling boiler cofiring efficiency and environmental emissions potential boiler metal wastage and any other experiences associated with the use of this fuel The results of this investigation provide the basis for the development of an optimum dRDF fuel specification These results identify performance characteristics and operating problems of the existing dRDF fuel pellet and contain an economic feasibility assessment of using this fuel Keywords Renewable Fuel Alternate Energy Sources Combustion Energy Alternate Boiler Fuels *Stationary Gas Turbine Alternative Fuels* John S. Daugherty,Barney J. Venables,1986 The objective of this research effort is to produce an environmentally acceptable chemically biologically stable and storable densified refuse derived fuel dRDF pellet To accomplish this a suitable binder s must be used Over 150 binders were investigated by a laboratory screening procedure

Thirteen binder binder combinations of the initial group of 150 binders were selected for further pilot plant studies Approximately seven tons of RDF from Ames Iowa and Refcom Pompano Beach Florida were pelletized in the summer 1985 in a series of experiments at the Jacksonville Florida Naval Air Station using these binders The pelletized dRDF was then subjected to a battery of chemical and physical tests Results to date and work to be accomplished during the next fiscal year will be discussed Should Refuse-derived Fuel be Densified?
