Abood, 2022-07-21 This book presents power system analysis methods that cover all aspects of power systems operation utilization control and system management At the beginning of each chapter an introduction is given describing the objectives of the chapter The authors have attempted to present power system parameters in a lucid logical step by step approach in a lucid logical step by step approach In recognition of requirements by the Accreditation Board for Engineering and Technology ABET on integration of engineering computer tools the authors demonstrate the use of MATLAB programming in obtaining solutions to engineering power problems MATLAB is introduced in a student friendly manner and follow up is given in Appendix A The use of MATLAB and power system applications are presented throughout the book Practice problems immediately follow each illustrative example Students can follow the example step by step to solve the practice problems. These practice problems test students comprehension and reinforce key concepts before moving on to the next chapter In each chapter the authors discuss some application aspects of the chapter's concepts using computer programming. The material covered in the chapter applied to at least one or two practical problems to help students see how the concepts are used in real life situations Thoroughly worked examples are provided at the end of every section These examples give students a solid grasp of the solutions and the confidence to solve similar problems themselves Designed for a three hour semester course on Power System Operation Utilization and Control this book is intended as a textbook for a senior level undergraduate student in electrical and computer engineering The prerequisites for a course based on this book are knowledge of standard mathematics including calculus and complex numbers and basic undergraduate engineering courses Bayesian Biostatistics Emmanuel Lesaffre, Andrew B.
