**During the Oligocene-Miocene Climatic Transition** Maria Mutti, Werner E. Piller, Christian Betzler, 2011-06-13. The Oligocene and Miocene Epochs comprise the most important phases in the Cenozoic global cooling that led from a greenhouse to an icehouse Earth. Recent major advances in the understanding and time resolution of climate events taking place at this time, as well as the proliferation of studies on Oligocene and Miocene shallow water neritic carbonate systems, invite us to re-evaluate the significance of these carbonate systems in the context of changes in climate and Earth surface processes. Carbonate systems, because of a wide dependence on the ecological requirements of organisms producing the sediment, are sensitive recorders of changes in environmental conditions on the Earth surface. The papers included in this Special Publication address the dynamic evolution of carbonate systems deposited during the Oligocene and Miocene in the context of climatic and Earth surface processes, focusing on climatic trends and controls over deposition, temporal changes in carbonate producers and palaeoecology, carbonate terminology, facies processes and environmental parameters including water temperature and production depth profiles, carbonate producers and their spatial and temporal variability, and tectonic controls over architecture. This book is part of the International Association of Sedimentologists (IAS) Special Publications. The Special Publications from the IAS are a set of thematic volumes edited by specialists on subjects of central interest to sedimentologists. Papers are reviewed and printed to the same high standards as those published in the journal Sedimentology, and several of these volumes have become standard works of reference. **Reservoir Characterization of Tight Gas Sandstones** Ali Kadkhodaie, Rahim Kadkhodaie, 2022-08-10. **Sandstone Diagenesis** Stuart D. Burley, 2009 Diagenesis affects all sediments after their deposition and includes a fundamental suite of physical chemical and biological processes that control the texture mineralogy and fluid flow properties of sedimentary rocks Understanding the processes and products of diagenesis is thus a critical component in the analysis of the evolution of sedimentary basins and has practical implications for subsurface porosity destruction preservation and generation This in turn is of great relevance to the petroleum and water industries as well as to the location and nature of some economic mineral deposits

*Geological Evolution of the Precambrian Indian Shield* M.E.A. Mondal, 2018-05-26 This book presents findings from research into the Precambrian history of the Indian shield obtained using state of the art technology It demonstrates a paradigm shift towards studying the Precambrian shield regions using petrological geochemical structural metallogenic sedimentological and paleobiological data from the rocks in the Precambrian shield area and presents a collection of contributions on these diverse topics that help to reconstruct the Precambrian evolution of the Indian Shield

**Glacial Sedimentary Processes and Products** Michael J. Hambrey, Poul Christoffersen, Neil F. Glasser, Bryn Hubbard, 2009-03-05 Associating ice masses with the transport and deposition of sediments has long formed a central theme in glaciology and glacial geomorphology The reason for this focus is clear in that ice masses are responsible for much of the physical landscape which characterizes the Earth's glaciated regions This association also holds at a variety of scales for example from the grain size characteristics of small scale moraines to the structural architecture of large scale glacial sedimentary sequences in both surface and subaqueous environments This volume brings numerous state of the art research contributions together each relating to a different physical setting spatial scale process or investigative technique The result is a diverse and interesting collection of papers by glaciologists numerical modellers and glacial geologists which are all linked by the theme of investigating the relationships between the behaviour of ice masses and their resulting sedimentary sequences

**Mesozoic Stratigraphy of India** Santanu Banerjee, Subir Sarkar, 2021-08-02 This book envisages a multi proxy approach using stable isotopes geochemical proxies magnetic susceptibility and associated biotic events for paleoclimatic and paleoenvironmental interpretations of the Mesozoic sedimentary record of India Mesozoic rocks of India record abnormal sea level rise greenhouse climate intensified volcanism hypoxia in seawater extensive black shale deposition and hydrocarbon occurrence The Mesozoic has also

witnessed mass extinction events evolution of dinosaurs and breakdown of the supercontinent Pangea and the formation of Gondwana Although the Mesozoic geology of India has witnessed significant progress in the last century literature survey reveals a huge gap in knowledge regarding sequence stratigraphy chemostratigraphy and key geological events A synthesis of sedimentological paleontological and chemical data is included to presenting a comprehensive understanding of the Indian Mesozoic record to students researchers and professionals

**Analogue and Numerical Modelling of Sedimentary Systems** Poppe de Boer, George Postma, Kees van der Zwan, Peter Burgess, Peter Kukla, 2009-01-26 Understanding basin fill evolution and the origin of stratal architectures has traditionally been based on studies of outcrops well and seismic data studies of and inferences on qualitative geological processes and to a lesser extent based on quantitative observations of modern and ancient sedimentary environments Insight gained on the basis of these studies can increasingly be tested and extended through the application of numerical and analogue forward models Present day stratigraphic forward modelling follows two principle lines 1 the deterministic process based approach ideally with resolution of the fundamental equations of fluid and sediment motion at all scales and 2 the stochastic approach The process based approach leads to improved understanding of the dynamics physics of the system increasing our predictive power of how systems evolve under various forcing conditions unless the system is highly non linear and hence difficult or perhaps even impossible to predict The stochastic approach is more direct relatively simple and useful for study of more complicated or less well understood systems Process based models more than stochastic ones are directly limited by the diversity of temporal and spatial scales and the very incomplete knowledge of how processes operate and interact on the various scales The papers included in this book demonstrate how cross fertilization between traditional field studies and analogue and numerical forward modelling expands our understanding of Earth surface systems

Structural and diagenetic controls on reservoir quality in tight siliciclastic and carbonate rocks Becker, Ivy, 2018-11-30 Upper Carboniferous Westphalian C D fluvial sandstones and Zechstein Ca<sub>2</sub> Stassfurt second cycle carbonates represent two important hydrocarbon reservoir units in NW Europe A better understanding of reservoir quality variations and their spatial variability is crucial to develop successful exploration strategies In fluvial Westphalian C D sandstones and Ca<sub>2</sub> carbonate reservoirs the reservoir properties are controlled by diagenetic alterations and intense fracturing

*Sedimentary Processes, Environments and Basins* Gary Nichols, Edward Williams, Chris Paola, 2009-03-05 For several decades Peter Friend has been one of the leading figures in sedimentary geology and throughout that time he has helped scores of other people by supervising doctoral students collaborating with colleagues especially in developing countries and selflessly sharing ideas with fellow geologists This collection of papers is a survey of the research frontier in basin dynamics a field Peter Friend helped initiate and a token of thanks from people who have benefited from an association with Peter during their careers The papers in this book fall into four themes Tectonics and sedimentation Landscape evolution and provenance Depositional systems and Fluvial sedimentation which reflect Peter's

research interests and are all important areas of current research in sedimentary geology. There are both case studies and review articles on these themes which reflect recent work but the collection can also be considered to be a sampler of sedimentary geology for anyone with broad interests in the Earth sciences.

*The Role of Halogens in Terrestrial and Extraterrestrial Geochemical Processes* Daniel E. Harlov, Leonid Aranovich, 2018-01-30. The book summarizes the knowledge and experiences concerning the role of halogens during various geochemical processes such as diagenesis, ore formation, magma evolution, metasomatism, mineralization and metamorphism in the crust and mantle of the Earth. It comprises the role of halogens in other terrestrial worlds like volatile rich asteroids, Mars and the ice moons of Jupiter and Saturn. Review chapters outline and expand upon the basis of our current understanding regarding how halogens contribute to the geochemical, geophysical evolution and stability of terrestrial worlds overall.

**Perspectives in Carbonate Geology** Peter K. Swart, Gregor P. Eberli, Judith A. McKenzie, 2012-04-10. This special publication *Perspectives in Carbonate Geology* is a collection of papers most of which were presented at a symposium to honor the 80th birthday of Bob Ginsburg at the meeting of Geological Society of America in Salt Lake City in 2005. The majority of the papers in this publication are connected with the study of modern carbonate sediments. Bob Ginsburg pioneered the concept of comparative sedimentology that is using the modern to compare to and relate to and understand the ancient. These studies are concerned with Bob's areas of passion: coral reefs and sea level, submarine cementation and formation of beach rock, surface sediments on Great Bahama Bank and other platforms, origin of ooids, coastal sediments, formation of stromatolites, impact of storms on sediments and the formation of dolomite. The remainder of the papers apply the study of modern environments and sedimentary processes to ancient sediments.

*Early Miocene Paleobiology in Patagonia*  
Sergio F. Vizcaíno, Richard F. Kay, M. Susana Bargo, 2012-10-11 Coastal exposures of the Santa Cruz Formation in southern Patagonia have been a fertile ground for recovery of Early Miocene vertebrates for more than 100 years. This volume presents a comprehensive compilation of important mammalian groups which continue to thrive today. It includes the most recent fossil finds as well as important new interpretations based on ten years of fieldwork by the authors. A key focus is placed on the paleoclimate and paleoenvironment during the time of deposition in the Middle Miocene Climatic Optimum (MMCO) between twenty and fifteen million years ago. The authors present the first reconstruction of what climatic conditions were like and present important new evidence of the geochronological age habits and community structures of fossil bird and mammal species. Academic researchers and graduate students in paleontology paleobiology paleoecology stratigraphy climatology and geochronology will find this a valuable source of information about this fascinating geological formation.

From Depositional Systems to Sedimentary Successions on the Norwegian Continental Margin Allard W. Martinus, R. Ravnås, J. A. Howell, R. J. Steel, J. P. Wonham, 2014-10-06 The Norwegian Continental Shelf (NCS) focus of this special publication is a prolific hydrocarbon region and both exploration and production activity remains high to this day with a positive production outlook. Diagenetic controls on fluid flow and mechanical properties in Rotliegend reservoir sandstones  
Monsees, Alexander C., 2021-10-28 Reservoir quality of Rotliegend sandstones is mainly controlled by their permeability and porosity and their mechanical properties Thus diagenetic porosity reducing processes need to be understood to evaluate reservoir quality and geotechnical properties in sandstones Best reservoir qualities are achieved in mature sandstones with large amounts of quartz cementation The relative length of grain contacts compared to the respective grain diameter is identified as proxy for rock strength
