Sedimentwater Interactions In Anoxic Freshwater Sediments Mobility Of Heavy Metals And Nutrients:

The Interactions Between Sediments and Water Brian Kronvang, Jadran Faganeli, Nives Ogrinc, 2007-04-05 This book focuses on sediments as a pollutant in natural freshwater and marine habitats and sediments as a vector for the transfer of chemicals such as nutrients and contaminants The selected papers cover three main topics assessment and or restoration of disturbed watersheds sediment water linkages in terrestrial and aquatic environments evaluation of sediment and ecological changes in marine and freshwater habitats Sediment-Water Interactions in Anoxic Freshwater Sediments Yigang Song, German Müller, 1999 Aquatic sediments are important sinks of inorganic and organic pollutants as well as of nutrients in highly industrialized and densely populated areas As many aquatic organisms live in or on the sediments polluted sediments provide a pathway for the chemicals to food chain organisms and finally to man Sediment water interactions play a fundamental role in biogeochemical cycling of the elements One of the most important reactions is the mineralization of organic matter during early diagenesis which not only leads to anoxic conditions connected with a recycling of nitrate phosphate and ammonia but changes the chemical bonding of heavy metals into more soluble species Our study carried out on freshwater sediments enabled us to show whether heavy metals and nutrients are released into the overlying water under changes in physicochemical conditions The information is important to water management and sediment dredging activities in harbour areas *The East African Great Lakes: Limnology, Palaeolimnology and Biodiversity* Eric O. Odada, Daniel O. Olago, 2006-03-09 The Second International Symposium on the East African Lakes was held from 10 15 January 2000 at Club Makokola on the southern shore of Lake Malawi The symposium was organized by the International Decade for the East African Lakes IDEAL a research consortium of African European and North American scientists interested in promoting the investigations of African Great Lakes as archives of environmental and climatic dynamics Over one hundred African European and North American scientists with special expertise in the tropical lakes participated in the symposium which featured compelling presentations on the limnology climatology palaeoclimatology and biodiversity of the East African Lakes It is their papers that comprise this book The large lakes of East Africa are important natural resources that are heavily utilized by their bordering countries for transportation water supply fisheries waste disposal recreation and tourism The lakes are unique in many ways they are sensitive to climatic change and their circulation dynamics water column chemistry and biological complexity differ significantly from large lakes at higher latitudes they have long continuous high resolution records of past climatic change and they have rich and diverse populations of endemic organisms These unique properties and the significance of the palaeolimnological records demand and attract research interest from around the world

Arsenic Contamination of Groundwater Satinder Ahuja, 2008-10-03 Provides a viable reference describing the state of knowledge on sources of arsenic contamination in ground water which affects about 100 million people worldwide With contributions from world renowned experts in the field this book explores developments in the transport kinetics detection

measurement seasonal cycling accumulation geochemistry removal and toxicology of arsenic Includes compelling case studies describing how arsenic contamination occurs and the devastating effects on the people and environment affected by it

Soil and Sediment Remediation Piet Lens,T. Grotenhuis,G. Malina,H. Tabak,2005-09-30 Soil and Sediment Remediation discusses in detail a whole set of remediative technologies currently available to minimise their impact Technologies for the treatment of soils and sediments in situ landfarming bioscreens bioventing nutrient injection phytoremediation and ex situ landfarming bio heap treatment soil suspension reactor will be discussed The microbiological process technological and socio economical aspects of these technologies will be addressed Special attention will be given to novel biotechnological processes that utilise sulfur cycle conversions e g sulfur and heavy metal removal from soils Also the potential of phytoremediation will be highlighted In addition treatment schemes for the clean up of polluted megasites e g harbours and Manufactured Gaswork Plants MGP will be elaborated The aim of Soil and Sediment Remediation is to introduce the reader in the biogeochemical characteristics of soil and sediments new techniques to study soil sediment processes molecular probes microelectrodes NMR clean up technologies for soils polluted with organic PAH NAPL solvents or inorganic heavy metals pollutants preventative and remediative strategies and technologies available in environmental engineering novel process applications and bioreactor designs for bioremediation the impact of soil pollution on society and its economic importance

Sediment Dynamics and Pollutant Mobility in Rivers Bernd Westrich,Ulrich Förstner,2007-10-11 This is the first interdisciplinary book on the mobilization of nutrients and pollutants in the water phase due to hydrodynamic processes Coverage includes the formation of aggregates in turbulent water flocks and biofilms from organic reactions and the formation of new surfaces for re adsorption of dissolved pollutants The book gathers papers resulting from an International Symposium on Sediment Dynamics and Pollutant Mobility in River Basins in Hamburg Germany March 2006

[Encyclopedia of Ecology](#) Sven Erik Jørgensen,Brian D. Fath,2008 The Encyclopedia of Ecology contains contributions from international experts on a diverse array of topics related to ecology It provides current and comprehensive information on many themes including behavioral ecology ecological processes ecological modeling ecological engineering ecological indicators ecological informatics ecosystems ecotoxicology evolutionary ecology general ecology global ecology human ecology and systems ecology The online version includes extensive internal cross referencing and dynamic linking to journal articles and abstract databases

Elements and their Compounds in the Environment Ernest Merian,Manfred Anke,Milan Ihnat,Markus Stoeppler,2004 Since the last edition was published in 1991 the Merian has established itself as the standard reference on this topic and remains unmatched in the breadth of material covered This new edition has 20 % more pages while being more clearly and concisely structured New topical features are the focus on nutritional aspects and the coverage of further elements including non metals The newly added chapters cover more than 15 essential elements as well as some of environmental and nutritional importance While many chapters of the previous edition

have been practically rewritten to accommodate the rapid progress made in this field all the contributions have been revised and updated to present the current state of knowledge As such the handbook continues to provide detailed information on the environmental metals that influence the health of plants animals and humans with particular attention given to environmental and analytical chemistry bioavailability metabolic pathways and biological effects It also delineates the problems related to waste soils and wildlife as well as the risks caused by the increasing output of metals from industry and households It retains the proven features of the first edition such as the extensive bibliography numerous tables with useful data and a glossary of terms and once again all the contributions were not only written but also reviewed by acknowledged and experienced experts In total international experts from 15 countries have pooled their knowledge and experience to create this ultimate resource Essential information for chemists biologists geologists food scientists toxicologists and physiologists involved in environmental research and remediation risk assessment food research and industrial hygiene
