Mining Coal and Undermining Gender Jessica Smith Rolston, 2014-03-31 Though mining is an infamously masculine industry women make up 20 percent of all production crews in Wyoming's Powder River Basin the largest coal producing region in the United States How do these women fit into a working culture supposedly hostile to females This is what anthropologist Jessica Smith Rolston herself a onetime mine worker and the daughter of a miner set out to discover Her answers based on years of participant observation in four mines and extensive interviews with miners managers engineers and the families of mine employees offer a rich and surprising view of the working families that miners construct In this picture gender roles are not nearly as straightforward or as straitened as stereotypes suggest Gender is far from the primary concern of coworkers in crews Far more important Rolston finds is protecting the safety of the entire crew and finding a way to treat each other well despite the stresses of their jobs These miners share the burden of rotating shift work continually switching between twelve hour day and night shifts which deprives them of the daily rhythms of a typical home from morning breakfasts to bedtime stories Rolston identifies the mine workers response to these shared challenges as a new sort of constructed kinship that both challenges and reproduces gender roles in their everyday working and family lives Crews expectations for coworkers to treat one another like family and to adopt an agricultural work ethic tend to minimize gender differences And yet these differences remain tenacious in the equation of masculinity with technical expertise and of femininity with household responsibilities For Rolston such lingering areas of inequality highlight the importance of

structural constraints that flout a common impulse among men and women to neutralize the significance of gender at home and in the workplace At a time when the Appalachian region continues to dominate discussion of mining culture this book provides a very different and unexpected view of how miners live and work together and of how their lives and work reconfigure ideas of gender and kinship

Relatively Speaking Eve Danziger, 2001 Based upon 14 months of ethnographic fieldwork among the Mopan Maya in Belize Eve Danziger examines the semantic complexity of particular kinship terms used among Mopan women and children and shows that a culture specific analysis of their terms is superior to other non ethnographically based methods In doing so she contributes not only to theoretical semantics and the ethnography of that area but to the cross cultural study of child development and language acquisition

American Indian Languages Lyle Campbell, 2000-09-21 Native American languages are spoken from Siberia to Greenland and from the Arctic to Tierra del Fuego they include the southernmost language of the world Yaghan and some of the northernmost Eskimoan Campbell's project is to take stock of what is currently known about the history of Native American languages and in the process examine the state of American Indian historical linguistics and the success and failure of its various methodologies There is remarkably little consensus in the field largely due to the 1987 publication of *Language in the Americas* by Joseph Greenberg He claimed to trace a historical relation between all American Indian languages of North and South America implying that most of the Western Hemisphere was settled by a single wave of immigration from Asia This has caused intense

controversy and Campbell as a leading scholar in the field intends this volume to be in part a response to Greenberg Finally Campbell demonstrates that the historical study of Native American languages has always relied on up to date methodology and theoretical assumptions and did not as is often believed lag behind the European historical linguistic tradition
