Radar Systems Principles Harold R. Raemer,1996-10-30 In planning a radar system having the proper mathematical modeling of propagation effects clutter and target statistics is essential Radar Systems Principles provides a strong theoretical basis for the myriad of formulas and rules of thumb required for analysis conceptual design and performance evaluation of radar systems Mathematical derivations of formulas commonly used by radar engineers are presented with detailed discussions of the assumptions behind these expressions and their ranges of validity These principles are used in a wide range of radar applications Radar Systems Principles makes it easy to understand the steps in calculating various formulas and when and how these formulas are used A set of problems is provided for each chapter enabling you to check your progress in applying the principles discussed in each section of the text There are more than 170 figures illustrating key concepts Numerous references to well known books on radar for coverage of practical design issues and other specialized topics are given Radar Systems Principles is an ideal textbook for advanced undergraduates and first year graduate students and also makes an excellent vehicle for self study by engineers wishing to enhance their understanding of radar principles and their implication in actual systems Non-Line-of-Sight Radar Brian Watson,Joseph R. Guerri,2019-02-28 Non Line of Sight Radar is the first book on the new and exciting area of detecting and tracking targets via radar multipath without direct line of sight DLOS This revolutionary capability is finding new applications in the tracking of objects in non line of sight NLOS urban environments including detection and tracking of UAVs This book brings together for the first time all the

essential underpinnings and techniques required to develop and field a viable NLOS radar. It presents many examples including electromagnetic radiation propagation in urban NLOS environments extracting building location and morphology from readily available terrain databases predictive ray tracing techniques and multi target NLOS tracking. Readers will learn how to apply radar to urban tracking that was previously deemed impossible. The book shows how real time physics calculations can be incorporated into the radar processor and how existing radar hardware can be adopted for non line of sight radar use without major upgrades. Including results from both high fidelity physics based simulations and actual flight test data this book establishes the efficacy of NLOS radar in practical applications.
