Argumentation in Science Education Sibel Erduran, María Pilar Jiménez-Aleixandre, 2007-12-06 Our conversations about arguments began in Nashville in the Spring of 1996 in Richard Duschl's doctoral seminar that we were both attending. Marilar Jimenez Aleixandre as a visiting scholar at Vanderbilt University. Jimenez Aleixandre and Duschl were designing authentic problems in genetics for the University of Santiago de Compostela-based RODA project aimed at engaging high school students in argumentation. Erduran and Duschl had been working on Project SEPIA, extending their work in Pittsburgh schools to the design of curricula that support epistemological aspects of scientific inquiry, including argumentation. In that spring we attended a NARST session in St. Louis where Gregory Kelly, Steven Druker, and Catherine Chen presented a paper about argumentation. As a consequence, a symposium about argumentation was organized, possibly the first of its kind at the 1997 NARST meeting in Chicago, including papers from Kelly and colleagues and from Jimenez Aleixandre, Bugallo, and Duschl. The symposium was attended, among others, by Rosalind Driver, who had just submitted an application for funding of an argumentation project based at King's College London, a project Erduran would incidentally work on after Driver's untimely death. From this time frame in the 1990s to the present day, argumentation studies in science education have increased at a rapid pace, from stray papers for which we were unable to find an appropriate strand in a conference to a wealth of research base exploring ever more sophisticated issues.

Handbook of Research on Solving Modern Healthcare Challenges With Gamification Alexandre Peixoto de Queirós, Ricardo Marques, António José, 2021-01-22 While many fields such as e-learning, business, and marketing have taken advantage of the potential of gamification, the healthcare domain has just started to exploit this emerging trend, still in an ad hoc fashion. Despite the huge potential of applying gamification on several topics of healthcare, there are scarce theoretical studies regarding methodologies, techniques, specifications, and frameworks. These applications must be examined further as they can be used to solve major healthcare-related challenges such as care plan maintenance, medication adherence, phobias treatment, or patient education. Handbook of Research on Solving Modern Healthcare Challenges With Gamification aims to share new approaches and methodologies to build e-health solutions using gamification and identifies new trends on this topic, from pedagogical strategies to technological approaches. This book serves as a collection of knowledge that builds the theoretical foundations that can be helpful in creating sustainable e-health solutions in the future. While covering topics such as augmented and virtual reality, ethical issues in gamification, e-learning, telehealth services, and digital applications, this book is essential for research scholars, healthcare computer science teachers and students, pursuing healthcare computer science-related subjects, enterprise developers, practitioners, researchers, academicians, and students interested in the latest developments and research solving healthcare challenges with modern e-health solutions using gamification.
