Recent Advances In Fourier Analysis And Its Applications:

Recent Advances in Fourier Analysis and Its Applications J.S. Byrnes, 2012-12-06 This volume contains papers presented at the July 1989 NATO Advanced Study Institute on Fourier Analysis and its Applications The conference held at the beautiful Il Ciocco resort near Lucca in the glorious Tuscany region of northern Italy created a dynamic interaction between world renowned scientists working in the usually disparate communities of pure and applied Fourier analysts The papers to be found herein include important new results in x ray crystallography by Nobel Laureate Herbert Hauptman the application of the new concept of bispectrum to system identification by renowned probabilist Athanasios Papoulis fascinating applications of number theory in Fourier analysis by eminent electrical engineer Manfred R Schroeder and exciting concepts regarding polynomials with restricted coefficients by foremost mathematical problem solver Donald J Newman The remaining papers further illustrate the inherent power and beauty of classical Fourier analysis whether the results presented were sought as an end in themselves or whether these classical methods were employed as a tool in illustrating and solving a particular applied problem From antenna design to concert hall acoustics to image and speech processing to unimodular polynomials each conference participant benefited significantly from his or her exposure in many cases for the first time to those scientists on the other end of the spectrum from themselves The purpose of this volume is to pass those benefits on to the reader

Harmonic Analysis and Applications Christopher Heil, 2007-08-02 This volume is dedicated to John Benedetto It seems just yesterday that we celebrated his 60th birthday in a memorable conference in College Park Yet that was October of 1999 and already more than six years have passed But John is still too young to be fully honored by a single foreword or even a single volume that attempts to summarize the impact of his work on harmonic analysis his students and his coworkers Given his continuing high and even increasing level of activities his list of lifetime achievements is surely far from complete Even so we will make an attempt in this foreword to take a look back to see the major lines of his work and activities during the past 40 years of his life as a scientist and to learn from his biography and bibliography how the field of harmonic analysis has changed over the years and in particular to see the vibrant role that John has taken in this process John's first paper appeared in 1965 when he was 25 years old and his first book the Springer Lecture Notes on Harmonic Analysis on Totally Disconnected Sets when he was 31 By that time he had already published on the subjects of Tauberian algebras in the theory of generalized functions and on questions related to spectral synthesis His work on this latter topic continued through the 1970s culminating in the insightful volume Spectral Synthesis 1975 Only a year later his text Real Variables and Integration with Historical Notes appeared

Recent Advances in Operator Theory, Operator Algebras, and their Applications Dumitru Gaspar, Israel Gohberg, Dan Timotin, Florian H. Vasilescu, Laszlo Zsido, 2006-03-30 The Romanian conferences in operator theory as they are now commonly called have started in the year 1976 as an annual workshop on operator theory held at the University of Timi soara originally only with Romanian attendance The meeting soon evolved into an international conference with an increasingly larger participation It has been organized jointly initially by the Department of Mathematics of INCREST and by the Faculty of Sciences of the University of Timi soara then since 1990 by the Institute of Mathematics of the Romanian Academy and the Faculty of Mathematics of the West University of Timi soara The venue was usually Timi soara and occasionally Herculane Bucharest or Predeal Since 1986 the conference has been regularly held biannually at the beginning of the summer The 19th Conference on Operator Theory OT 19 took place between June 27th and July 2nd 2002 at the West University of Timi soara It is a pleasure to acknowledge the considerable financial support received through the programme EURROMMAT of the European Community under contract ICA1 CT 2000 70022 Partial support has also been provided by the Romanian Ministry of Education Research and Youth grants CERES 152 2001 and 153 2001 The full programme of the conference is included in the sequel It is worth mentioning also a special event that has taken place during the conference professor Israel Gohberg has been awarded the title of Doctor Honoris Causa of the West University of Timi soara

Coherent States, Wavelets, and Their Generalizations Syed Twareque Ali, Jean-Pierre Antoine, Jean-Pierre Gazeau, 2013-10-30 This second edition is fully updated covering in particular new types of coherent states the so called Gazeau Klauder coherent states nonlinear coherent states squeezed states as used now routinely in quantum optics and various generalizations of wavelets wavelets on manifolds curvelets shearlets etc In addition it contains a new chapter on coherent state quantization and the related probabilistic aspects As a survey of the theory of coherent states wavelets and some of their generalizations it emphasizes mathematical principles subsuming the theories of both wavelets and coherent states into a single analytic structure The approach allows the user to take a classical like view of quantum states in physics Starting from the standard theory of coherent states over Lie groups the authors generalize the formalism by associating coherent states to group representations that are square integrable over a homogeneous space a further step allows one to dispense with the group context altogether In this context wavelets can be generated from coherent states of the affine group of the real line and higher dimensional wavelets arise from coherent states of other groups The unified background makes transparent an entire range of properties of wavelets and coherent states Many concrete examples such as coherent states from semisimple Lie groups Gazeau

Klauder coherent states coherent states for the relativity groups and several kinds of wavelets are discussed in detail The book concludes with a palette of potential applications from the quantum physically oriented like the quantum classical transition or the construction of adequate states in quantum information to the most innovative techniques to be used in data processing Intended as an introduction to current research for graduate students and others entering the field the mathematical discussion is self contained With its extensive references to the research literature the first edition of the book is already a proven compendium for physicists and mathematicians active in the field and with full coverage of the latest theory and results the revised second edition is even more valuable **Sampling Theory, a Renaissance** Götz E.

Pfander,2015-12-08 Reconstructing or approximating objects from seemingly incomplete information is a frequent challenge in mathematics science and engineering A multitude of tools designed to recover hidden information are based on Shannon's classical sampling theorem a central pillar of Sampling Theory The growing need to efficiently obtain precise and tailored digital representations of complex objects and phenomena requires the maturation of available tools in Sampling Theory as well as the development of complementary novel mathematical theories Today research themes such as Compressed Sensing and Frame Theory re energize the broad area of Sampling Theory This volume illustrates the renaissance that the area of Sampling Theory is currently experiencing It touches upon trendsetting areas such as Compressed Sensing Finite Frames Parametric Partial Differential Equations Quantization Finite Rate of Innovation System Theory as well as sampling in Geometry and Algebraic Topology Mathematical Reviews ,2005 **Twentieth Century Harmonic Analysis** J.S. Byrnes,2001-09-30 Proceedings of the NATO Advanced Study Institute held in Il Ciocco Italy 2 15 July 2000
